## Introduction to chemistry

1. Wooden splints **F** and **G** were placed in different zones of a Bunsen burner flame. The diagram below gives the observations that were made

- (a) Explain the difference between **F** and **G**  
 (b) Name the type of flame that was used in the above experiment
2. The diagrams below represent a list of apparatus which are commonly used in a chemistry laboratory:-

- (a) Give the correct order of the apparatus, using the **letters only**, to show the correct arrangement that can be used to prepare and investigate the nature of PH of a sample of onion solution  
 (b) Name **one** chemical substance and apparatus that is needed in this experiment
3. (a) When the air-hole is fully opened, the bunsen burner produces a non-luminous flame. Explain  
 (b) Draw a labelled diagram of anon-luminous flame
4. (a) What is a drug?  
 (b) Give **two** drugs that are commonly abused by the youth.
5. The diagram below shows three methods for collecting gases in the laboratory

- (a) Name the methods **A** and **B**  
 (b) From the methods above, identify **one** that is suitable for collecting sulphur (IV) oxide. Explain

6. A mixture of hexane and water was shaken and left to separate as shown in the diagram below:

State the identity of;

(i) P ..... (ii) W .....

7. The diagrams below are some common laboratory apparatus. Name each apparatus and state its use

Diagram	Name	Use
	(½mk)	(½mk)
	(½mk)	(½mk)

8. The diagram below shows some parts of a Bunsen burner

Explain how the parts labelled T and U are suited to their functions

9. The diagram below shows the appearance of two pieces of paper placed in different parts of a non-luminous flame of a Bunsen burner and removed quickly before they caught fire.

(a) What do the experiments show about the outer region of the flame?

- (b) From the above experiment, which part of the flame is better to use for heating? Give a reason
10. A crystal of copper (II) sulphate was placed in a beaker of water. The beaker was left standing for two days without shaking. State and explain the observations that were made.
11. Study the information in the table below and answer questions that follow.  
(Letters given are not real symbols)

Ions	Electron arrangement	Ionic radius (nm)
A <sup>+</sup>	2.8	0.95
B <sup>+</sup>	2.8.8	0.133
C <sup>2+</sup>	2.8	0.065

Explain why the ionic radius of :-

- (a) B<sup>+</sup> is greater than that of A<sup>+</sup>
- (b) C<sup>2+</sup> is smaller than the of A<sup>+</sup>

### Simple classification of substances

1. The diagram below shows the heating curve of a pure substance. Study it and answer the questions that follow:

- (a) What physical changes are taking place at points X and Z?
- (b) Explain what happens to the melting point of sodium chloride added to this substance
2. (a) State **two** differences between luminous flame and non-luminous flame
- (b) It is advisable to set a Bunsen burner to luminous flame prior to an experiment.  
Explain
3. The paper chromatography of a plant extract gave the following results:

Solvent	Number of spots
X	6
Y	2
Z	3

- (a) Which is the most suitable solvent for purifying the extract? Explain
- (b) Ball pen cannot be used to mark solvent front in the above chromatography. Explain
4. Name the process which takes place when:
- (a) Solid Carbon (IV) Oxide (dry ice) changes directly into gas
- (b) A red litmus paper turns white when dropped into chlorine water
- (c) Propene gas molecules are converted into a giant molecule
5. A sample of copper turnings was found to be contaminated with copper (II) oxide. Describe how a sample of copper metal can be separated from the mixture
6. Copper (II) oxide and charcoal are black solids. How would you distinguish between the two solids?
7. a) What is chromatography?
- b) Give **two** applications of chromatography

8. The two elements **P** and **R** were separately burned in air, the products gave the results recorded in the table below:

ELEMENTS PHYSICAL STATE AT ROOM TEMPERATURE	P SOLID	R SOLID
Physical states of products	White solid powder only	Colourless gases <b>L</b> and <b>M</b>
Nature of solutions in water	Basic	<b>L</b> strongly acidic <b>M</b> slightly acidic

- (a) Suggest the identity of element **R**.  
 (b) Describe how the nature of the solutions of the oxides were determined
9. The diagram below represents a paper chromatography for the three brands of soft drinks containing banned artificial food additives.

	—	6 —	7 —
4	—	—	5 —
		2 —	3 —
1	—		
	<b>A</b>	<b>B</b>	<b>C</b>
<b>BRANDS OF SOFT DRINKS</b>			

- A** and **C** found to contain the banned artificial food additives. Which numbers indicate the banned artificial food additives?
10. Without using any laboratory chemical, describe a simple laboratory experiment to distinguish between calcium hydrogen carbonate and sodium hydrogen carbonate
11. Substance **Q** has a melting point of 15°C and boiling point of 70°C.
- (a) On the same axes, draw the melting point and boiling point graph for **Q** and the room temperature

- (b) State the physical state of substance **Q** at room temperature
12. Cooking oils comprise of a mixture of compounds which have a boiling point range of 23°C to 27°C.
- (i) What evidence is then to support the statement that cooking oil is a mixture?  
 (ii) Name another experimental technique that could be used to confirm your answer in part (i) above
13. A form 1 student carried out the separation as shown in the set-up below:-

- (i) Identify the method above.....  
 (ii) Give **one** of its disadvantages  
 (iii) Name a mixture which can be separated by the set-up above
14. What is meant by melting point and boiling point of a substance?
15. The apparatus below were used by a student to study the effect of heat on hydrated copper II sulphate

- (a) What is the role of the ice cold water .....
- (b) Name liquid **P** .....
- (c) What observation is made in the boiling tube
17. The diagram below shows chromatograms of blood samples obtained from three athletes. One athlete used illegal drug to improve performance in competition.

- (a) Name the line marked **M** .....
- (b) Identify the athlete who used illegal drug .....
18. Classify the following processes as chemical changes or physical changes

Process physical or chemical  
Neutralization .....

Substance	Water	Concentrated sulphuric(VI)acid	Concentrated sodium hydroxide
Ethene	Slightly soluble	Soluble	Insoluble
Ammonia	Very soluble	Very soluble	Very soluble
Hydrogen	Slightly soluble	Insoluble	Insoluble

Sublimation .....

Fractional distillation .....

Displacement reaction .....

19. Give **two** reasons why a luminous flame is not used for heating purposes  
20. Classify the following processes as chemical changes or physical changes

Process physical or chemical

Neutralization .....

Sublimation .....

Fractional distillation .....

Displacement reaction .....

21. Give **two** reasons why a luminous flame is not used for heating purposes  
22. State **two** criteria for determining the purity of a substance

23. Study the information in the table below and answer the questions.  
i) A mixture contains ethene, Hydrogen and ammonia gases. Explain how a sample of hydrogen gas can be obtained from this mixture.  
24. a) i) The diagram below show spots of a pure substance **A**, **B**, and **C** on a chromatography paper. Spot **D** is that of a mixture

After development **A**, **B**, and **C** were found to have moved 8cm, 3cm and 6cm respectively. **D** had separated into two spots which had moved 6cm and 8cm  
On the diagram above;

- I. Label the baseline (origin)  
II. Show the positions of all the spots after development  
ii) Identify the substances present in mixture **D**  
b) Describe how solid ammonium chloride can be separated from a solid mixture of ammonium chloride and anhydrous calcium chloride  
c) The table below shows liquids that are miscible and those that are immiscible

Liquid	L <sub>3</sub>	L <sub>4</sub>
L <sub>1</sub>	Miscible	Miscible
L <sub>2</sub>	Miscible	Immiscible

Use the information given in the table to answer that questions that follow;

- i) Name the method that can be used to separate L<sub>1</sub> and L<sub>2</sub> from a mixture of the two  
ii) Describe how a mixture of L<sub>2</sub> and L<sub>4</sub> can be separated  
25. A student left some crushed fruit mixture with water for some days. He found the mixture had fermented. He concluded that the mixture was contaminated with water and ethanol with

boiling point of 100°C and 78°C respectively. The set-up of apparatus below are used to separate the mixture.

- Name the piece of apparatus labelled **W**
- What is the purpose of the thermometer in the set-up?
- At which end of the apparatus **W** should tap water be connected?.....
- Which liquid was collected as the first distillate? Explain
- What is the name given to the above method of separating mixture?
- State **two** applications of the above method of separating mixtures
- What properties of the mixture makes it possible for the component to be separated by the above methods?

26. The set-up below was used to separate a mixture:-

- Name the apparatus missing in the set-up
- Give **one** example of mixture **T**
- What is the name of this method of separation

27. a) The diagram below shows a set – up used by a student to find out what happens when Copper (II) sulphate crystals are heated.

- State the observations made when the blue copper (II) sulphate crystals are heated.
- Identify liquid **Y** and write an equation for its formation.

b) Pellets of sodium hydrogen and anhydrous Copper (II) sulphate were put in separate Petri-dishes and left in the open for two hours. Explain the observation in each Petri-dish.

28. The chromatography below shows the constituents of a flower extract using an organic solvent:-

- (a) (i) Name a possible organic solvent you can use for this experiment  
 (ii) State **one** property that makes the red pigment to move the furthest distance from **M**  
 (iii) Describe how one could get a sample of yellow pigment  
 (iv) On the diagram indicate solvent front  
 (b) Describe how Aluminium chloride can be separated from a mixture of aluminium chloride and sodium chloride

29. Study the information below and answer the questions that follow:

Solid	Cold water	Hot water
<b>R</b>	Soluble	Soluble
<b>V</b>	Insoluble	Insoluble
<b>S</b>	Insoluble	Insoluble

Describe how the mixture of solid **R**, **S**, and **V** can be separated

30. Given a mixture of lead (II) oxide, ammonium chloride and sodium chloride, describe how this mixture can be separated to obtain a sample of each.  
 31. The setup below was used to separate two miscible liquids **Q** and **T**  
 (Boiling points; Q =98° C, T=78°C)

- (a) Identify the mistakes in the setup above  
 (b) Identify Distillate **X**

32. Name the process which takes place when:  
 a) Solid Carbon (IV) oxide (dry ice) changes directly into gas.

- b) A red litmus paper turns white when dropped into chlorine water.  
 c) Propene gas molecules are converted into a giant molecule.
33. The following diagram shows a paper chromatogram of substances A, B, C, and D which are coloured

- (a) Indicate the solvent front on the chromatogram  
 (b) Which substance is pure? .....  
 (c) Substance E is a mixture of C and D. Indicate its chromatogram in the diagram
34. Study the information below and answer the following questions. A mixture contains three solids A, B, and C. The solubility of these solids in different liquids is as shown below:-

Solid	Water	Alcohol	Ether
A	Soluble	Insoluble	Insoluble
B	Insoluble	Soluble	Very soluble
C	Soluble	Soluble	Insoluble

- Explain how you will obtain sample C from the mixture
35. State and explain the observations made when iodine crystals is heated in a boiling tube?

### Acids, bases and combustion

1. The table below shows solutions A, B and C are tested and observations records as shown:

Solution	Observations on indicator
A	Methyl orange turns yellow
B	Phenolphthalein turns colourless
C	Litmus turns purple

- (a) Using the table above, name an acid  
 (b) How does the pH value of 1M potassium hydroxide solution compare with that of 1M aqueous ammonia? Explain
2. The information below gives PH values of solutions V, W, X, Y Z

Solution	PH values
V	2
W	6.5
X	11
Y	14
Z	4.5

- (a) Which solution is likely to be:  
 (i) Calcium hydroxide? .....  
 (ii) Rain water? .....
- (b) Which solution would react most vigorously with Zinc carbonate

3. a) Complete the table below to show the colour of the given indicator in acidic and basic solutions.

Indicator	Colour in	
	Acidic Solution	Basic Solution
Methyl Orange		Yellow
Phenolphthalein	Colourless	

- b) How does the PH value of 0.1M potassium hydroxide solution compare with that of 0.1M aqueous ammonia? Explain.
4. Use the information given below to answer the questions that follow:

Solution	G	H	I	J	K
pH	1.5	6.5	13.0	7.0	8.0

- (a) Which of the solutions would be used to relieve a stomach upset caused by indigestion?  
 (b) Which solution is likely to be:  
 (i) Dilute sulphuric acid?  
 (ii) Sodium hydroxide solution?
5. Solid copper (II) oxide is a base although it does not turn litmus paper to blue. Explain
6. Below are the pH values of 4 types of medicine represented by letters **P**, **Q**, **R** and **S**

MEDICINE	pH VALUES
<b>P</b>	7.0
<b>Q</b>	5.0
<b>R</b>	8.0
<b>S</b>	6.0

- a) It is not advisable to use **S** when a patient has indigestion .Explain  
 b) What is the role of chemistry in drug manufacture
7. Explain why very little Carbon (IV) oxide gas is evolved when dilute sulphuric (VI) acid is added to lead (II) carbonate
8. State **one** commercial use of Calcium Oxide
9. The following data gives the **pH** values of some solutions

Solution	pH
<b>P</b>	14.0
<b>Q</b>	6.8
<b>R</b>	2.5

- (a) What colour change would occur in solution **P** on addition of two drops of phenolphthalein indicator?  
 (b) State the pH value of a resulting solution when equal moles of solution **P** and **R** react
10. In an experiment, ammonia gas was prepared by heating ammonium salt with an alkali. After drying, ammonia gas was collected at room temperature and pressure.  
 (a) What is meant by the term alkali?  
 (b) Explain using physical properties of the gas why ammonia is not collected by downward delivery
11. The table shows the colours obtained when some indicators are added to solutions:-

Solution	Blue litmus paper	Indicator W
Distilled water	.....	Colourless
Calcium hydroxide	Blue	Pink
Nitric acid	.....	Colourless

- (a) Complete the table by filling in the missing colours  
 (b) Identify indicator **W**
12. (a) Flower extracts can be used as Acid-base indicators. Give **two** limitations of such indicators  
 (b) The diagram below shows spots of pure substances **W**, **X**, and **Y** on a chromatography paper. Spot **Z** is that of a mixture

- After development **W**, **X**, and **Y** were found to have moved  $9\text{cm}^3$ ,  $4\text{cm}^3$  and  $7\text{cm}^3$  respectively. **Z** has separated into two spots which have moved  $7\text{cm}^3$  and  $9\text{cm}^3$ :-  
 On the diagram:-  
 I. Label the baseline and solvent front  
 II. Show the position of all the spots after development  
 III. Identify the substances present in mixture **Z**
13. A beekeeper found that when stung by a bee, application of a little solution of sodium hydrogen carbonate helped to relieve the irritation of the affected area. Explain
14. 10g of sodium hydrogen carbonate were dissolved in  $20\text{cm}^3$  of water in a boiling tube. Lemon juice was then added dropwise with shaking until there was no further change.  
 (a) Explain the observation which was made in the boiling tube when the reaction was in progress  
 (b) What observations would be made if the lemon juice had been added to copper turnings in a boiling tube?
15. (a) Complete the table below to show the colour of the given indicator in acidic and basic solutions:

Indicator	Colour in acidic solution	Basic solution
Methyl orange	Pink	
Phenolphthalein		Pink

16. Solutions can be classified as acids, bases or neutral. The table below shows solutions and their pH values:-

Solutions	PH VALUES
K	1.5
L	7.0
M	14.0

- (i) Select any pair that would react to form a solution of PH 7  
 (ii) Identify **two** solutions that would react with aluminium hydroxide. Explain

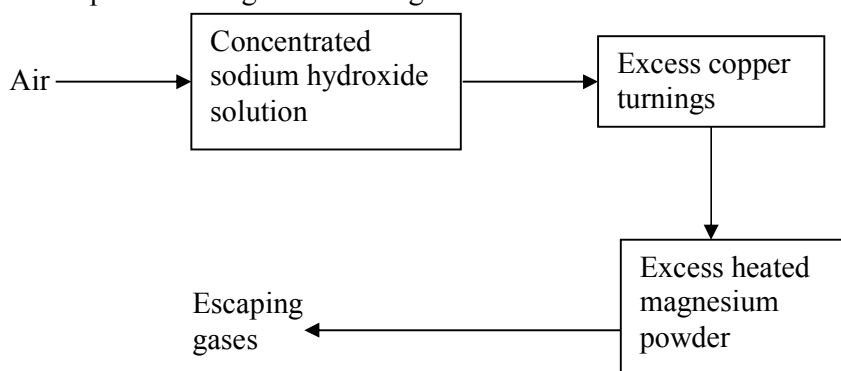

## Air and combustion

1. The set-up below was used to prepare a sample of oxygen gas. Study it and answer the questions that follow.

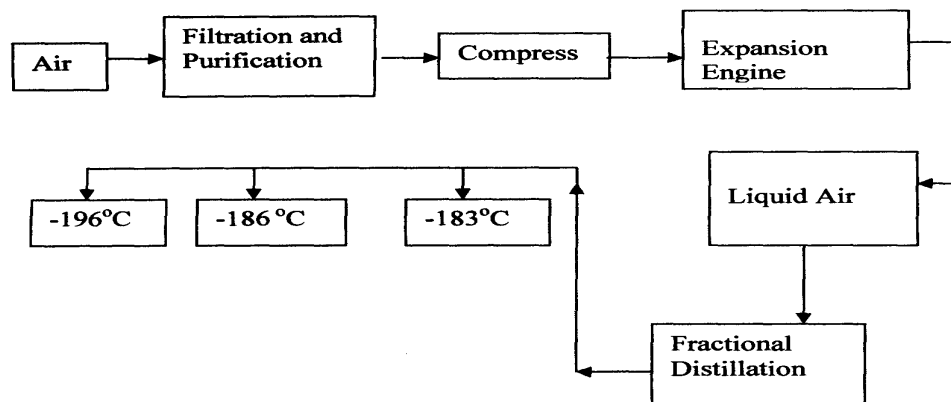

- (i) Complete the diagram to show how Oxygen can be collected  
 (ii) Write a chemical equation of the reaction to produce oxygen

2. Air was passed through several reagents as shown below:

- (a) Write an equation for the reaction which takes place in the chamber containing Magnesium powder  
 (b) Name **one** gas which escapes from the chamber containing magnesium powder. Give a reason for your answer
3. (a) What is rust?  
 (b) Give **two** methods that can be used to prevent rusting  
 (c) Name **one** substance which speeds up the rusting process
4. 3.0g of clean magnesium ribbon 8.0g of clean copper metal were burnt separately in equal volume of air and both metals reacted completely with air;  
 a) State and explain where there was greater change in volume of air  
 $Mg = 24$   $Cu = 64$   
 b) Write an equation for the reaction between dilute sulphuric acid and product of burnt copper
5. Oxygen is obtained on large scale by the fractional distillation of air as shown on the flow chart below.

- Identify the substance that is removed at the filtration stage
- Explain why Carbon (IV) oxide and water are removed before liquefaction of air
- Identify the component that is collected at  $-186^{\circ}\text{C}$

6. The set-up below was used to study some properties of air.

7. State and explain **two** observations that would be made at the end of the experiment. A form two student in an attempt to stop rusting put copper and Zinc in contact with iron as shown:-

- State whether rusting occurred after one week if the set-ups were left out
- Explain your answer in (a) above

- In an experiment, a piece of magnesium ribbon was cleaned with steel wool. 2.4g of the clean magnesium ribbon was placed in a crucible and completely burnt in oxygen. After cooling the product weighed 4.0g
  - Explain why it is necessary to clean magnesium ribbon
  - What observation was made in the crucible after burning magnesium ribbon?
  - Why was there an increase in mass?
  - Write an equation for the major chemical reaction which took place in the crucible
  - The product in the crucible was shaken with water and filtered. State and explain the observation which was made when red and blue litmus paper were dropped into the filtrate
- In an experiment a gas jar containing some damp iron fillings was inverted in a water trough containing some water as shown in the diagram below. The set-up was left un-disturbed for three

days. Study it and answer the questions that follow:

- (a) Why were the iron filings moistened?
  - (b) State and explain the observation made after three days.
  - (c) State **two** conclusions made from the experiment.
  - (d) Draw a labelled set-up of apparatus for the laboratory preparation of oxygen using Sodium Peroxide
  - (e) State **two** uses of oxygen
10. In an experiment, a piece of magnesium ribbon was cleaned with steel wool. 2.4g of the clean magnesium ribbon was placed in a crucible and completely burnt in oxygen. After cooling the product weighed 4.0g
- a) Explain why it is necessary to clean magnesium ribbon
  - b) What observation was made in the crucible after burning magnesium ribbon?
  - c) Why was there an increase in mass?
  - d) Write an equation for the major chemical reaction which took place in the crucible
  - e) The product in the crucible was shaken with water and filtered. State and explain the observation which was made when red and blue litmus paper were dropped into the filtrate
11. The set-up below was used to collect gas **F** produced by the reaction between sodium peroxide and water

- (i) Name gas **F**.....
  - (ii) At the end of the experiment, the solution in the round bottomed flask was found to be a strong base. Explain why this was so
  - (iii) Which property of gas **F** makes it be collected by the method used in the set-up?
  - (iv) Give **one** industrial use of gas **F**
12. . The set-up below was used to investigate properties of the components of air:

- (i) State **two** observations made during the experiment
- (ii) Write **two** chemical equations for the reactions which occurred
- (iii) The experiment was repeated using burning magnesium in place of phosphorous. There was greater rise of water than in the first case. Explain this observation
- (iv) After the two experiments, the water in each trough was tested using blue and red litmus papers. State and explain the observations of each case.
- (a) Phosphorous experiment
- (b) magnesium experiment
- (v) Briefly explain how a sample of nitrogen gas can be isolated from air in the laboratory
13. (a) A group of students burnt a piece of Mg ribbon in air and its ash collected in a Petri dish. The ash was found to comprise of magnesium Oxide and Magnesium nitride
- (i) Write an equation for the reaction leading to formation of the magnesium nitride
- (ii) A little water was added to the products in the Petri dish. State and explain the observation made.
- (iii) A piece of blue litmus paper was dipped into the solution formed in (b) above. State the observation made.
14. A form one class carried out an experiment to determine the active part of air. The diagram below shows the set-up of the experiment and also the observation made.
- (i) At the beginning
- (ii) observation at the end of the experiment

- (a) (i) Identify substance **M** .....
- (ii) State **two** reasons for the suitability of substance **M** for this experiment
- (b) Write the equation for the reaction of substance **M** and the active part of air
- (c) (i) Using the letters **Y** and **X** write an expression for the percentage of the active part of air
- (ii) The expression in (c)(i) above gives lower value than the expected. Explain
- (d) (i) Explain the observation made when litmus paper is dipped into the beaker at the end of the experiment

- (ii) Name the active part of air .....
- (iii) Suggest another method that can be used to determine the active part of air
15. A piece of phosphorous was burnt in excess air. The product obtained was shaken with a small amount of hot water to make a solution
- Write an equation for the burning of phosphorus in excess air
  - The solution obtained in (b) above as found to have pH of 2. Give reasons for this observation
16. Study the set-up below and answer the questions that follow:-

- State **two** observations that would be made after one week. Explain
  - Write the equation of the reaction taking place in the test-tube
17.  $\text{Fe}_3\text{O}_4$  and  $\text{FeO}$  are oxides of iron which can be produced in the laboratory
- Write chemical equation for the reaction which can be used to produce each of the oxides
  - Write an ionic equation for the reaction between the oxide,  $\text{Fe}_3\text{O}_4$  and a dilute acid.
18. Below is a list of oxides.  
 $\text{MgO}$ ,  $\text{N}_2\text{O}$ ,  $\text{K}_2\text{O}$ ,  $\text{CaO}$  and  $\text{Al}_2\text{O}_3$   
 Select:-
- A neutral oxide.
  - A highly water soluble basic oxide.
  - An oxide which can react with both sodium hydroxide solution and dilute hydrochloric acid.
19. The diagram below shows students set-up for the preparation and collection of oxygen gas

- Name substance **X** used
- Write an equation to show the reaction of sodium peroxide with the substance named in **1(a)**

## 5. Water and hydrogen

- Hydrogen can reduce copper(II) oxide but not aluminium oxide. Explain
  - When water reacts with potassium metal the hydrogen produced ignites explosively on the surface of water.
    - What causes this ignition?
    - Write an equation to show how this ignition occurs
- In an experiment, dry hydrogen gas was passed over hot copper (II) oxide in a combustion tube as shown in the diagram below:-

- Complete the diagram to show how the other product, substance **R** could be collected in the laboratory.
  - Describe how copper could be obtained from the mixture containing copper (II) oxide
- The setup below was used to investigate the reaction between metals and water.

- Identify solid **X** and state its purpose
 

Solid X .....

Purpose .....
  - Write a chemical equation for the reaction that produces the flame.
- Gas **P** was passed over heated magnesium ribbon and hydrogen gas was collected as shown in the diagram below:

- (i) Name gas **P** .....
- (ii) Write an equation of the reaction that takes place in the combustion tube
- (iii) State **one** precaution necessary at the end of this experiment
5. When hydrogen is burnt and the product cooled, the following results are obtained as shown in the diagram below:

- (a) Write the equation for the formation of liquid **Y**
- (b) Give a chemical test for liquid **Y**
6. Jane set-up the experiment as shown below to collect a gas. The wet sand was heated before heating Zinc granules

**Wet sand**

- (a) Complete the diagram for the laboratory preparation of the gas
- (b) Why was it necessary to heat wet sand before heating Zinc granules?
- 7.
- 

- (a) Between **N** and **M** which part should be heated first? Explain
- (b) Write a chemical equation for the reaction occurring in the combustion tube.
8. The set-up below was used to investigate electrolysis of a certain molten compound;-

- (a) Complete the circuit by drawing the cell in the gap left in the diagram  
 (b) Write half-cell equation to show what happens at the cathode  
 (c) Using an arrow show the direction of electron flow in the diagram above
9. Hydrogen can be prepared by reacting zinc with dilute hydrochloric acid.
- Write an equation for the reaction.
  - Name an appropriate drying agent for hydrogen gas.
  - Explain why copper metal cannot be used to prepare hydrogen gas.
  - Hydrogen burns in oxygen to form an oxide.
    - Write an equation for the reaction.
    - State **two** precautions that must be taken before the combustion begins and at the end of the combustion.
  - Give **two** uses of hydrogen gas.
  - When zinc is heated to redness in a current of steam, hydrogen gas is obtained. Write an equation for the reaction.
  - Element **Q** reacts with dilute acids but not with cold water. Element **R** does not react with dilute acids. Element **S** displaces element **P** from its oxide. **P** reacts with cold water. Arrange the four elements in order of their reactivity, starting with the most reactive.
  - Explain how hydrogen is used in the manufacture of margarine.
10. a) The set-up below is used to investigate the properties of hydrogen.

- On the diagram, indicate what should be done for the reaction to occur
  - Hydrogen gas is allowed to pass through the tube for some time before it is lit. Explain
  - Write an equation for the reaction that occurs in the combustion tube
  - When the reaction is complete, hydrogen gas is passed through the apparatus until they cool down. Explain
  - What property of hydrogen is being investigated?
  - What observation confirms the property stated in (v) above?
  - Why is zinc oxide not used to investigate this property of hydrogen gas?
11. The set up below was used to collect gas **K**, produced by the reaction between water and calcium metal.

- (a) Name gas **K** .....
- (b) At the end of the experiment, the solution in the beaker was found to be a weak base. Explain why the solution is a weak base

## 6. Structure of the atom and the periodic table

1. In an experiment an unknown mass of anhydrous sodium carbonate was dissolved in water and the solution made up to 250cm<sup>3</sup>. 25cm<sup>3</sup> of this solution neutralized 20cm<sup>3</sup> of 0.25M nitric acid. (Na = 23.0 C = 12.0 O = 16.0)  
Calculate:  
(a) Moles of Nitric acid used  
(b) Moles of sodium carbonate in 25cm of the solution  
(c) Mass of unknown sodium carbonate used
2. Element **A** has atomic mass 23 and element **B** has atomic mass 7 and also have 12neutrons and 4 neutrons respectively.  
(a) Write the electronic arrangement of **A** and **B**  
(b) Which element has higher ionization energy? Explain
3. The table below shows the relative atomic masses and the percentage abundance of isotope M<sub>1</sub> and M<sub>2</sub> of element **M**.

	Relative atomic mass	% abundance
M <sub>1</sub>	62.93	69.09
M <sub>2</sub>	64.93	30.91

Calculate the relative atomic mass of element **M**

4. (a) Element **V** has two isotopes. Two thirds of <sup>54</sup>V and one third of <sup>57</sup>V . What is the relative atomic mass of element **V**?  
(b) The following refers to element **Y**

Isotope	A	B	C
Isotope mass	54	56	57

Given that isotope **C** contains 31 neutrons in its nucleus find the number of protons in isotope **B**

5. The table below shows the relative atomic masses and the percentage abundance of the isotopes L<sub>1</sub> and L<sub>2</sub> of element **L**.

	Relative atomic mass	% abundance
L <sub>1</sub>	62.93	69.09
L <sub>2</sub>	64.93	30.91

Calculate the relative atomic mass of element **K**.

6. An element **M** has two isotopes <sup>63</sup>M and <sup>65</sup>M . The relative atomic mass of the naturally occurring is 63.55. Calculate the percentage of each isotope

7. An oxide of element **G** has the formula as G<sub>2</sub>O<sub>3</sub>

- (a) State the valency of element **G**  
(b) In which group of the periodic table is element **G**?

8. The table below gives information about the ions T<sup>+</sup> and Z<sup>2-</sup>

Ion	T <sup>+</sup>	Z <sup>2-</sup>
Electron arrangement	2.8	2.8.8
Number of neutrons	12	16

- (a) How many protons are there in the nucleus of ?  
(i) Element **T**?  
(ii) Element **Z**?  
(b) Determine the relative formula mass of the compound formed between **T** and **Z**  
(c) State **two** conditions under which the compound would conduct electricity

9. Carbon and silicon belong to the same group of the periodic table, yet Carbon (IV) oxide is a gas while silicon (IV) oxide is a solid with a high melting point. Explain this difference
10. An ion of oxygen is larger than oxygen atom. Explain
11. Copper (II) oxide and charcoal are black solids. How would you distinguish between the two solids?
12. (a) Element X is found in period III and group IV. It consists of two isotopes  $^{28}\text{X}$  and  $^{\text{Q}}\text{X}$ .  
A sample of X was found to consist of 90% of  $^{28}\text{X}$ . If the relative atomic mass of X is 28.3, work out the number of neutrons in  $^{\text{Q}}\text{X}$   
(b) Draw an electrochemical cell for the above cell
13. Study the table below and answer the questions that follows:- (Letters are not the actual symbols of element)

Element	Electronic arrangement	Electrical conductivity
L1	2.8.2	Higher electrical conductivity
L2	2.8.1	High electrical conductivity
L3	2.8.3	Highest electrical conductivity

- L3 has the highest electrical conductivity. Explain
14. Define the term melting point of a substance
15. Use the information in the table below to answer the questions that follow.  
(The letters do not represent the actual symbols of the elements).

Element	Q	P	R	S	T
Atomic number	18	5	3	5	20
Mass number	40	10	7	11	40

- (a) Which **two** letters represent the same element? Give a reason  
(b) Give the number of neutrons in an atom of element **R**
16. The table below gives some elements in the periodic table. Use it to answer the questions that follow. The letters do not represent the actual symbols of the elements.

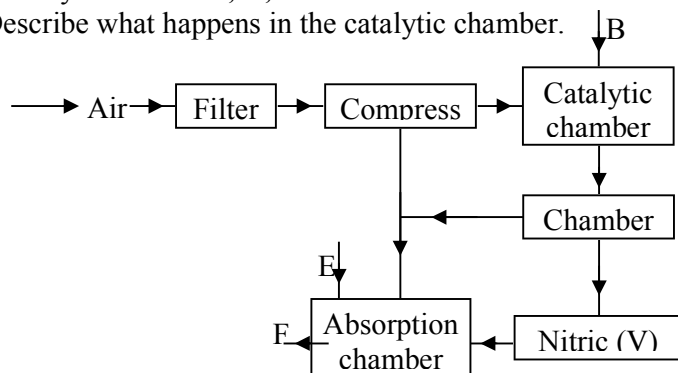

Element	A	B	C	D	E
Atomic number	12	13	14	15	16

- Which of the above letters represent:  
a) A metallic element which forms ions with the smallest ionic radius? Explain  
b) A non metallic element with the largest atomic size? Explain
17. The grid below is part of the periodic table. Use it to answer the questions that follow:  
(The letters are not the actual symbols).

						A	B	
C	D				G		E	
F								

- a) Write down the formula of the compound formed between C and A.  
b) Which element has the same electron arrangement as the stable ion of:  
(i) **F** ..... (ii) **A** .....

- c) Element **Q** has atomic number 15. Indicate its position on the grid.  
 d) Explain how the atomic radii of the following compare:  
 (i) C and F  
 (ii) C and D  
 e) Write the type of bond present in a compound formed between D and A.  
 f) Compound C and G were completely burned in oxygen.  
 (i) Write down equations to show the combustion of each of the elements.  
 (ii) State whether each of the oxides (i) above is basic or acidic.
18. The following flow chart shows the industrial manufacture of Nitric (V) acid.

- c) State what takes place in chamber **D**.  
 d) 60 – 65% nitric (V) acid is produced in the absorption chamber. Describe how the acid can be concentrated.  
 e) State why nitric (V) acid is stored in dark bottles.  
 f) Copper reacts with nitric (V) acid and not hydrochloric acid. Explain.
19. The number of protons, neutrons and electrons in atoms **A** to **F** are given in the table below the letters do not represent the actual symbol of the elements:-

Atoms	Protons	Neutrons	Electrons
A	3	4	2
B	9	10	10
C	12	12	12
D	17	18	17
E	17	20	17
F	18	22	18

- (a) Choose from the table the letters that represent:  
 (i) An atom of a metal .....  
 (ii) A neutral atom of a non-metal .....  
 (iii) An atom of a noble gas .....  
 (iv) A pair of isotopes .....  
 (v) A cation .....
- (b) The grid below shows a part of the periodic table. The letters do not represent the actual symbols.  
 Use it to answer the questions that follow:-

C							T
	K				U		
X	Y		M		Q	W	
J							Z

- (a) How do the atomic radius of element **X** and **Y** compare
- (b) (i) Using crosses (**X**) to represent electrons, draw the atomic structure of element **Q**  
 (ii) State the period and the group to which element **Q** belong
- (c) (i) The ionic configuration of element **G** is 2.8 **G** forms an ion of the type  $G^{-1}$ .  
 Indicate on the grid, the position of element **G**.  
 (ii) To which chemical family does element **G** belong?  
 (iii) State **one** use of element **U**  
 (iv) What is the nature of the compound formed between **K** and **U**
20. (a) Study the table below and answer the questions that follow.

Particle	Atomic number	Ionic configuration	Formula of oxide	Atomic radii	Ionic radii
<b>P</b>	4	.....	.....	0.110	0.031
<b>Q</b>	.....	2.8.8	QO	0.200	0.099
<b>R</b>	.....	2.8.8	R <sub>2</sub> O	0.230	0.133
<b>S</b>	17	2.8.8	S <sub>2</sub> O <sub>7</sub>	0.099	0.181
<b>T</b>	16	.....	.....	0.104	0.231

- (i) Complete the table above
- (ii) From the table, choose the most reactive metal. Explain
- (iii) Which element is the most electronegative. Explain
- (iv) Using dots (•) and crosses (x) to represent electrons, show the bonding in the chloride of **Q**
- (v) Explain the solubility of element **T** in water
- (b) (i) Why is aluminium used to make utensils yet it is a reactive metal?  
 (ii) Distinguish between valency and oxidation number
21. a) Work out the oxidation number of phosphorous in the following compound H<sub>3</sub>PO<sub>3</sub>  
 b) Study the equation below:  

$$Mg_{(s)} + 2H_2O_{(l)} \longrightarrow Mg(OH)_{2(aq)} + H_{2(g)}$$
 Which species has undergone oxidation. Explain
22. The grid below represents part of the periodic table. The letters do not represent the actual symbols of the elements. Study it and answer the questions that follow:

<b>L</b>						<b>L</b>	
<b>M</b>	<b>P</b>			<b>T</b>		<b>J</b>	<b>U</b>
<b>N</b>	<b>Q</b>		<b>R</b>	<b>S</b>			<b>V</b>
							<b>W</b>

- (a) Explain why element **L** appears in two different groups in the grid above
- (b) State the name of the chemical family to which **P** and **Q** belong
- (c) Write the formula of the compound formed between **P** and **V**
- (d) Compare the melting points of **Q** and **S**. Explain
- (e) Identify an element whose oxide dissolves in both acids and alkalis
- (f) Write the equation for the burning of **T** in excess air
- (g) Using dots (•) and cross (x) to represent electrons, draw a diagram to illustrate bonding in the sulphide of **Q**
- (h) State **one** use of element **X**
23. The grid below represents part of the periodic table. Study it and answer the questions that follow:

<b>S</b>				<b>R</b>	<b>E</b>		<b>X</b>
<b>Q</b>	<b>Z</b>					<b>M</b>	<b>T</b>

- (a) (i) Identify the element that gains electrons most readily  
(ii) Which of the metal is most reactive? Explain  
(iii) What name is given to the family of elements to which elements **X** and **T** belong?  
(iv) Explain why:-  
(I) Ionic radius of **Q** is larger than that of **M**  
(II) Atomic radius of **Q** is greater than that of **S**  
(v) Which of the element in the table does not have the ability to form an ionic or covalent bond? Explain  
(vi) Give the formula of the compound formed between **R** and **Z**
24. The grid below is part of the periodic table. The elements are not represented by their actual symbols. Use the information to answer the questions that follow.

<b>T</b>				<b>K</b>	<b>S</b>	
			<b>W</b>	<b>R</b>		<b>N</b>
<b>Q</b>						

- a) (i) Which is the most reactive  
(I) Non — metal? \*  
Explain  
(II) Metal?  
Explain  
(ii) Name the family to which elements **T** and **Q** belongs.  
(iii) Write the formula of the compound formed when **W** reacts with **S**.  
(iv) Name the type of bond and structure formed when elements **R** and **K** react.  
(v) Explain why element **N** doesn't form compounds with other elements.  
(vi) Compare the atomic radii of **T** and **Q**. Explain.
25. Study the data given in the following table and answer the questions that follow. The letters are not the actual symbols of elements.

Element	Number of protons	Melting point	Bpt °C
<b>A</b>	11	98	890
<b>B</b>	12	650	1110
<b>C</b>	13	60	2470
<b>D</b>	14	1410	2360
<b>E</b>	15	442	280

		590	
<b>F</b>	16	113 119	445
<b>G</b>	17	-101	-35
<b>H</b>	18	-189	-186

- (i) State and explain the trend in melting point in **A B C**  
(ii) Explain why the melting point and boiling points of element **D** is the highest  
(iii) Explain why the element represented by letter **E** has two melting point values  
(iv) Write down the chemical formula between element **C** and sulphate ions  
(v) Name the chemical family in which **H** belong and state one use of the element  
(vi) What is the nature of the oxide of the elements represented by letters **C** and **F**?
26. An element **W** has an atomic number 13.  
a) Write the electronic configuration of the most stable ion of **W**  
b) Write the formula of the oxide of the element **W**
27. Identify the particles that facilitate the electric conductivity of the following substances  
(i) Sodium metal  
(ii) Sodium Chloride solution  
(iii) Molten Lead Bromide
28. Compare with a reason the atomic radius of Sodium to that of Aluminum.
29. Study the information in the table below and answer the questions that follow:

Ion	No. of protons	No. of electrons
P <sup>3-</sup>	7	10
Q <sup>+</sup>	19	18
R <sup>2+</sup>	12	10

- a) Write the electron arrangement of element P.  
b) Give the group and period to which elements Q and R respectively.  
Q .....  
R .....
30. Ethanol is a liquid at room temperature but does not conduct electricity. Explain.
31. Electronic configuration for elements represented by **P, Q, R** and **S** are:-  
P= 2.8.6, Q= 2.8.2, R= 2.8.1 D= 2.8.8.  
(a) Select the element which forms  
(i) A double charged ion  
(ii) A soluble carbonate
32. The table below gives information on four elements by letters **K, L, M** and **N**. Study it and answer the questions that follow. The letters do not represent the actual symbol of the elements.
- | Element | Electron arrangement | Atomic radius (nm) | Ionic radius (nm) |
|---------|----------------------|--------------------|-------------------|
| K       | 2.8.2                | 0.136              | 0.065             |
| L       | 2.8.7                | 0.099              | 0.181             |
| M       | 2.8.8.1              | 0.203              | 0.133             |
| N       | 2.8.8.2              | 0.174              | 0.099             |
- (a) Which **two** elements have similar properties? Explain  
(b) What is the most likely formula of the oxide of **L**?  
(c) Which element is non-metal? Explain
33. Study the information given below and answer the questions that follow:

Element	Atomic radius (nm)	Ionic radius (nm)	Formula of oxide	Melting point of oxide (°C)
A	0.364	0.421	A <sub>2</sub> O	-119
D	0.830	0.711	DO <sub>2</sub>	837
E	0.592	0.485	E <sub>2</sub> O <sub>3</sub>	1466
G	0.381	0.446	G <sub>2</sub> O <sub>5</sub>	242
J	0.762	0.676	JO	1054

- (i) Write the formula of the compound formed when **J** combined with **G**  
 (b) Explain why the melting point of the oxide of **E** is higher than that of the oxide of **G**

## Chemical families

1. Study the information in the table below and answer the questions that follow:

Element	Atomic radius (nm)	Ionic radius (nm)
W	0.114	0.195
X	0.072	0.136
Y	0.133	0.216
Z	0.099	0.181

- (a) Would these form part of a metallic or a non-metallic group? Explain  
 (b) Suggest an element in the table above likely to be the most reactive. Explain
2. State the reason for using Argon in electric light bulbs
3. Study the information in the table below and answer the questions that follow. The letters do not represent the actual symbols of the elements.

Element	Electronic configuration	Boiling point
X	2.7	-188°C
Y	2.8.7	-35°C
Z	2.8.8.7	59°C

- (a) What is the general name given to the group in which the elements **X**, **Y** and **Z** belong?  
 (b) Select **two** elements which are coloured gases  
 (c) Explain why **Z** has the highest boiling point  
 (d) Write an equation for the reaction of element **Z** with iron metal  
 (e) Element **Y** was dissolved in water and a piece of blue litmus paper was put into the resulting solution. State and explain the observation that was made on the litmus paper
4. The table below shows elements **A**, **B**, **C**, **E**, **F**, and **G**. Elements in group **X** have a valency of 2 while elements in group **Y** have a valency of 1. Use the table to answer the questions that follow:-

Element	GROUP X				GROUP Y	
	A	B	C	E	F	G
Atomic radius (nm)	14.0	19.5	19.7	5.2	7.9	11.3
Ionic radius (nm)	7.6	10.5	12.4	12.6	16.1	19.6

- (i) Atomic radius increases from **A** to **C** and from **E** to **G**. Explain  
 (ii) Explain the difference in the atomic and ionic radii of group **X** elements  
 (iii) Elements **C** and **G** belong to the same period. Explain why the atomic radius of **C** is greater than that of **G**  
 (iv) Give the formula of the compound formed when **B** and **F** react  
 (v) What type of bonding is formed in the compound above? Explain  
 (vi) Starting with the least reactive, arrange the elements in group **Y** in the order of reactivity. Explain:
5. The information in the table below relates to elements in the same group of the periodic table. Study it and answer the question that follows.

Element	Atomic size (nm)
<b>P</b>	0.19
<b>Q</b>	0.23
<b>R</b>	0.15

- Which element has the highest ionization energy? Explain
6. Starting with Lead (II) carbonate explain how you would prepare a pure sample of Lead (II) sulphate
7. a) What is an isotope?  
b) An element **Q** consists of 3 isotopes of mass 28, 29, 30 and percentage abundance of 92.2, 4.7, 3.1 respectively. Determine the relative atomic mass of the element?
8. Study the information in the table below and answer the questions that follow.  
(The letters do not represent the actual symbols of the elements)

Element	Electronic configuration	Ionization energy KJ/mol)
<b>P</b>	2.2	1800
<b>Q</b>	2.8.2	1450
<b>R</b>	2.8.8.2	1150

- (a) What is the general name given to the group in which elements **P**, **Q** and **R** belong?  
(b) Explain why **P** has the highest ionization energy  
(c) Write a balanced chemical equation for the reaction between element **Q** and water

## Structure and bonding

- Ethanol is a liquid at room temperature but does not conduct electricity. Explain.
- a) Distinguish between a covalent bond and a co-ordinate bond.  
b) Draw a diagram to show bonding in an ammonium ion. (N = 7, H = 1)
- a) Explain why the metals magnesium and aluminium are good conductors of electricity.  
b) Other than cost, give **two** reasons why aluminium is used for making electric cables while magnesium is not.
- Explain why the boiling point of ethanol is higher than that of hexane.  
(Relative molecular mass of ethanol is 46 while that of hexane is 86).
- a) What is meant by **dative covalent bond**?
- Sodium and Magnesium belong to the same period on the periodic table and both are metals. Explain why magnesium is a better conductor of electricity than sodium.
- Using dots and crosses to represent electrons, draw the structures of the following:  
(a) Phosphorous chloride (PCl<sub>3</sub>)  
(b) Hydroxonium ion (H<sub>3</sub>O<sup>+</sup>)
- Between aluminium and copper which one is a better conductor? Explain
- Water has a boiling point of 100°C while hydrogen chloride has a boiling point of -115°C. Explain
- Explain why luminous flame is capable of giving out light and soot
- When blue litmus paper is dipped in a solution of aluminium chloride it turns red. Explain
- Carbon and Silicon are in the same group of the periodic table. Silicon (IV) Oxide melts at 2440°C while solid Carbon (IV) Oxide sublimes at -70°C. In terms of structure and bonding, explain this difference
- Element **A** has an atomic number of 6 and **B** has an atomic number of 9:  
(i) Write the electron arrangements for elements **A** and **B**  
(ii) Using dot (•) and cross (X) diagram, show how **A** and **B** combine to form a compound

14. (a) Explain why aluminium is a better conductor of electricity than magnesium  
 (b) Other than cost and ability to conduct, give a reason why aluminium is used for making cables while magnesium is not
15. Explain how electrical conductivity can be used to distinguish between magnesium oxide and silicon (IV) oxide
16. a) The diagram below represents part of the structure of sodium chloride crystal

The position of one of the sodium ions in the crystal is shown as;

- i) On the diagram, mark the positions of the other three sodium ions  
 ii) The melting and boiling points of sodium chloride are 801C and 1413C respectively. Explain why sodium chloride does not conduct electricity at 25C, but does not at temperatures between 801C and 1413C  
 b) Give a reason why ammonia gas is highly soluble in water  
 c) The structure of ammonium ion is shown below;

Name the type of bond represented in the diagram by N ———> H

- d) Carbon exists in different crystalline forms. Some of these forms were recently discovered in soot and are called fullerenes
- i) What name is given to different crystalline forms of the same element  
 ii) Fullerenes dissolve in methylbenzene while the other forms of carbon do not. Given that soot is a mixture of fullerenes and other solid forms of carbon, describe how crystals of fullerenes can be obtained from soot  
 iii) The relative molecular mass of one of the fullerenes is 720. What is the molecular mass of this fullerene
17. (a) Explain the following observations:-  
 (i) NaCl allows electric current to pass through them in molten state  
 (ii) Graphite is a non-metal yet it is a conductor of electricity
18. Study the table below and answer the questions that follow:-

Substance		A	B	C	D	E	F
Melting Point (°C)		801	113 119	-39	5	-101	1356
Boiling point (°C)		1410	445	457	54	-36	2860
Electrical Conductivity	Solid	Poor	Poor	Good	Poor	Poor	Poor
	liquid	Good	Poor	Good	Poor	Poor	Poor

I Identify with reasons the substances that:

- (i) Have a metallic structure (1½mk)  
 (ii) Have a molecular structure and exist in the liquid state at room temperature and pressure(

- (iii) Suggest a reason why substance **B** has two melting points  
 (iv) Substances **A** and **C** conduct electric current in the liquid state. State how the two substances differ as conductors of electric current \*

19. (I) Sodium metal tarnishes when exposed to the air where a white powder is formed on its surface. A small piece of this sodium metal was dropped into 25g of ethanol and 1200cm<sup>3</sup> of hydrogen gas was evolved at r.t.p. The unreacted ethanol was evaporated and a white solid remained. (Na=23, molar gas volume at r.t.p = 24dm<sup>3</sup>, C=12, O =16, H=1)  
 (a) Write a chemical equation for the reaction between ethanol and sodium metal  
 (b) Determine the mass of sodium that reacted with ethanol  
 (c) What mass of ethanol evaporated?  
 (d) The ethanol was evaporated at 80°C, while the white solid remained unaffected at this temperature. What is the difference in structure of ethanol and the white solid?  
 (II) (a) Name an inorganic liquid which liberates hydrogen gas with sodium metal  
 (b) What **two** differences would you observe if similar pieces of sodium were dropped separately into small beakers containing equal amount of ethanol and the liquid named in **(II)(a)** above respectively  
 (III) (a) Give the name of the white powder formed on the original piece of sodium metal  
 (b) Explain how the white powder named in **(III)(a)** is formed
20. The grid below represents part of the periodic table. The letters do not represent actual symbols of the elements. Study it and answer the questions that follow:-

<b>F</b>			<b>P</b>		<b>G</b>	<b>N</b>
	<b>Q</b>		<b>J</b>	<b>K</b>	<b>L</b>	<b>M</b>
<b>N</b>		<b>X - Z</b>				

- (a) What type of bond would you expect in the compound formed between **H** and **F**. Explain  
 (b) (i) Which of the elements **J** and **M** will have a greater atomic radius? Explain  
 (ii) Elements **F** and **N** are in the same group of periodic table. How do their atomic radius compare? Explain  
 (c) An element **W** has atomic number **15**. Indicate the position it would occupy in the table above  
 (d) What is the name given to elements **X – Z**?  
 (e) Why is **J** used in electric cables where **Q** is not  
 (f) **P** and **J** are termed as metalloids. What does the term metalloid mean?  
 (g) How would you expect the reactivity of **H** and **M** to compare? Explain
21. (a) Part of the periodic table is given below study it and answer the questions that follow. The letters do not represent the actual elements

<b>Y</b>					<b>Z</b>	
			<b>A</b>		<b>B</b>	

- (i) What type of bond is formed when **Y** reacts with **Z**. Explain  
 (ii) Explain the difference in the atomic radii of element **A** and **B**  
 (iii) Explain the difference in the reactivity of **Z** and **B**

- (b) Study the information in the table below and answer the questions that follow:  
(The letters do not represent the actual symbols of the elements)

Element	Electronic configuration	Ionization energy $\text{KJmol}^{-1}$
<b>P</b>	2:1	519
<b>Q</b>	2:8:1	494
<b>R</b>	2:8:8:1	418

- (i) What is meant by ionization energy?  
 (ii) Element **R** has the lowest ionization energy. Explain  
 (iii) When a piece of element **Q** is placed on water it melts and a hissing sound is produced as it moves on the water surface. Explain these observations  
 (iv) Write the equation for the reaction between element **Q** and water
22. The table below shows the elements in the third period, the oxides of the third period and their properties. The letters are not the actual symbols of the elements. Study the information and answer the questions that follow:

Element	Atomic number	Atomic radius(nm)	Oxide	State at RT	oxide melting point $^{\circ}\text{C}$
<b>M</b>	11	0.191	$\text{M}_2\text{O}$	Solid	1132
<b>N</b>	.....	0.160	$\text{NO}$	Solid	2852
<b>P</b>	13	0.130	.....	Solid	2072
<b>Q</b>	14	0.118	$\text{QO}_2$	.....	1610
<b>R</b>	.....	0.110	.....	Solid	580
<b>S</b>	16	0.102	$\text{SO}_2$	.....	-75
<b>T</b>	17	0.099	$\text{TO}_2$	Gas	-60
<b>V</b>	18	0.095	<b>X</b>	<b>X</b>	<b>X</b>

- a) i) Complete the table above  
 ii) Explain the trend in the atomic radius across the period  
 iii) Explain why the oxide of element **V** does not exist  
 b) Name the type of structure and bond in the following oxide

Oxide	Structure	Bond type
$\text{NO}$		
$\text{TO}_2$		

- ii) Using dots and crosses to represent electrons. Show the bonding in the oxide,  $\text{QO}_2$   
 c) i) Explain why elements **P** conducts electricity but **T** does not  
 ii) The oxide of **P** reacts both acids and alkalis. Give the name of this kind of oxide
23. The table below gives information about elements  $\text{A}_1$ ,  $\text{A}_2$ ,  $\text{A}_3$  and  $\text{A}_4$

Element	Atomic number	Atomic radius (nm)	Ionic radius (nm)
$\text{A}_1$	3	0.134	0.74
$\text{A}_2$	5	0.090	0.012
$\text{A}_3$	13	0.143	0.050
$\text{A}_4$	17	0.099	0.181

- (i) In which period of the periodic table is element  $\text{A}_2$ ? Give a reason  
 (ii) Explain why the atomic radius of:

- I.  $A_1$  is greater than that of  $A_2$   
 II.  $A_4$  is smaller than its ionic radius  
 III. Select the element which is in the same group as  $A_3$   
 IV. Using dots (●) and cross (x) to represent outermost electrons, draw a diagram to show the bonding in the compound formed when  $A_1$  reacts with  $A_4$
24. The atomic number of element **P** is **11** and that of **Q** is **8**  
 a) Write down the possible formula of the compound formed between **P** and **Q**  
 b) Using dots (·) and crosses(x) to represent electrons draw a diagram to represent the bonding in the compound in (a) above
25. Name the type of bonding and structure found in: -  
 (a) Ice  
 (b) Magnesium chloride
26. Name the type of bonding and structure found in: -  
 (a) Ice  
 (b) Magnesium chloride

27. Use the scheme to answer the questions that follow:

- (a) Identify solid **N** .....
- (b) Write a balanced equation for the formation of **Q**
- (c) Write the formula of the complex ion formed when sodium hydroxide is added to solution **L** in excess
28. (a) Using dots (●) and crosses (x) to represent electrons show bonding in:  
 $\text{NH}_2$  (N=7, H=1)                       $\text{S}_8$  (S = 16)
- (b) Show bonding in Carbon (II) Oxide by use of (—) or ( —>) to represent bonds.
29. In terms of structure and bonding, explain why diamond is the hardest naturally occurring Substance
30. Identify the bond types in the diagram
31. Elements **A**, **B**, **C**, and **D** are not actual symbols, have atomic numbers **19**, **9**, **12** and **10** respectively.  
 (a) Which **two** elements represent non-metals  
 (b) Write the formula of the compound formed between elements **B** and **C** and identify the bond present in the compound
32. (a) Distinguish between a covalent and dative bond  
 (b) Explain why nitrogen gas reacts with oxygen at very high temperature
33. Draw a dot (●) and cross (x) diagram to show bonding in:-  
 (i) Ammonium ion ( $\text{NH}_4^+$ )  
 (N = 7.0, H= 1)  
 (ii) Silane ( $\text{SiH}_4$ )  
 (Si= 14, H = 1)
34. Below is a table oxides of some period three elements

Oxides	Na <sub>2</sub> O	P <sub>4</sub> O <sub>6</sub>	SO <sub>2</sub>	Cl <sub>2</sub> O
State at room temp	Solid	Solid	Gas	Gas

- (a) Give the systematic name of Cl<sub>2</sub>O  
 (b) Explain why Na<sub>2</sub>O exists as a solid whereas SO<sub>2</sub> is a gas at room temperature

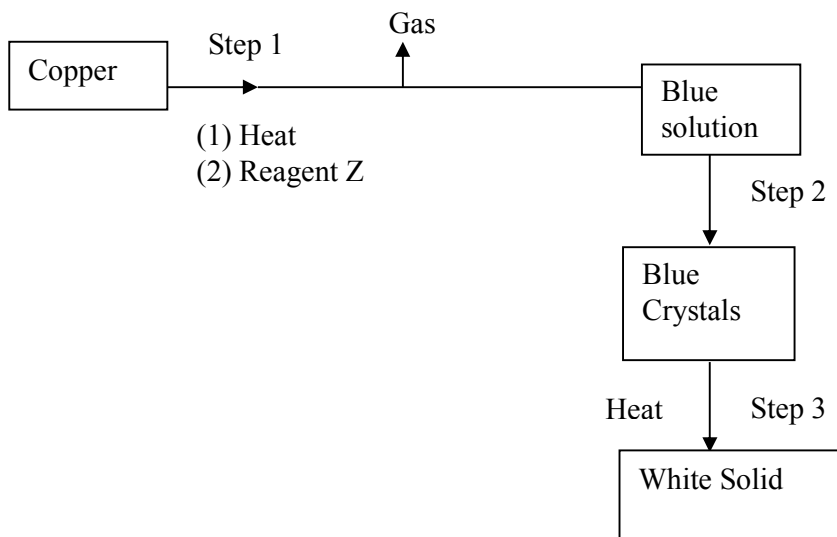

35. The table below shows properties of period three chlorides

<b>Formular of compound</b>	NaCl	MgCl <sub>2</sub>	AlCl <sub>3</sub>	SiCl <sub>4</sub>
<b>Bp °C</b>	1470°C	1420°C	180°C	60°C

Explain why AlCl<sub>3</sub> solid has a much lower boiling point than MgCl<sub>2</sub> solid

## Salts

1. Study the flow chart below and answer the questions that follow:

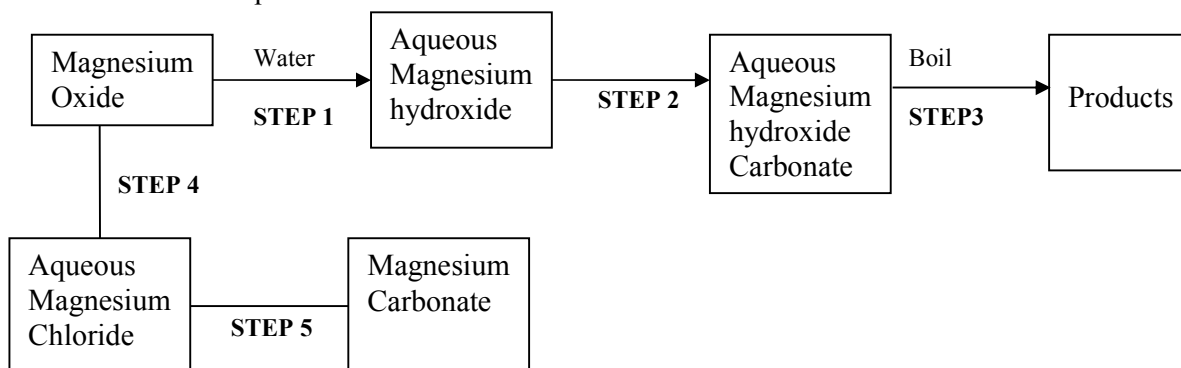

- a) Name reagent Z.  
 b) Describe the process which takes place in step 2.  
 c) Identify the white solid.
2. a) Starting from solid magnesium oxide, describe how a solid sample of magnesium hydroxide can be prepared.  
 b) Give **one** use of magnesium hydroxide.
3. Starting with lead (II) oxide, describe how you would prepare a solid sample of lead (II) Carbonate
4. Study the diagram below and answer the questions that follow:

- (a) Name the **two** salts formed in tube **A**  
 (b) State the observations made in tube **C**  
 (c) Name gas **P**
5. Study the information in the table below and answer the questions that follow:-

PARTICLE	MASS NUMBER	NUMBER OF PROTONS	NUMBER OF NEUTRONS	NUMBER OF ELECTRONS
<b>E</b>	37	17	<b>(i)</b>	18
<b>F</b>	32	<b>(ii)</b>	16	16
<b>G</b>	<b>(iii)</b>	19	20	18
<b>H</b>	40	20	<b>(iv)</b>	18

- (a) Complete the table by filling in the blank spaces **(i)** , **(ii)** **(iii)**, and **(iv)**  
 (b) Identify the particles which are electrically charged
6. Sodium Carbonate Decahydrate crystals were left exposed on a watch glass for two days.  
 a) State the observations made on the crystals after two days.  
 b) Name the property of salts investigated in the above experiment
7. Starting with sodium oxide, describe how a sample of crystals of sodium hydrogen carbonate may be prepared
8. In an experiment, ammonium chloride was heated in test-tube. A moist red litmus paper placed at the mouth of test first changed blue then red. Explain these observations:-
9. Using dots (•) and cross (x), show the structure of ammonium ion
10. a) Give the name of each of the processes described below which takes place when salts are exposed to air for sometime  
 i) Anhydrous copper sulphate becomes wet  
 ii) Magnesium chloride forms an aqueous solution  
 iii) Fresh crystals of sodium carbonate,  $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$  become covered with white powder of formula  $\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}$   
 b) Write the formula of the complex ion formed in each of the following reactions described below;  
 i) Zinc metal dissolves in hot alkaline solution  
 ii) Copper hydroxide dissolves excess ammonia solution
11. (a) Write an equation to show the effect of heat on the nitrate of:-  
 (i) Potassium  
 (ii) Silver
12. (a) The scheme below shows some reactions starting with magnesium oxide. Study it and answer the questions that follow:-

- (i) Name the reagents used in **steps 2 and 4**  
(ii) Write an equation for the reaction in **step 3**  
(iii) Describe how a solid sample of anhydrous magnesium carbonate is obtained in **step 5**
13. In the preparation of magnesium carbonate, magnesium was burnt in air and the product collected. Dilute sulphuric acid was then added and the mixture filtered and cooled. Sodium carbonate was added to the filtrate and the contents filtered. The residue was then washed and dried to give a white powder.
- (a) Give the name of the product  
(b) Write the chemical equation for the formation of the product  
(c) (i) Name the filtrate collected after sodium carbonate was added.  
(ii) Write down the chemical formula of the white powder  
(d) Write a chemical equation for the reaction between product in (a) and the acid  
(e) Write an ionic equation to show the formation of the white powder.  
(f) Write an equation to show what happens when the white powder is strongly heated.  
(g) Identify the ions present in the filtrate after addition of sodium carbonate.  
(h) What is the name given to the reaction that takes place when sodium carbonate was added to the filtrate?  
(i) Explain the observations made when crystals of sodium carbonate decahydrate are left exposed to the atmosphere for two days
14. a) Give the name of each of the processes described below which takes place when salts are exposed to air for sometime
- i) Anhydrous copper sulphate becomes wet  
ii) Magnesium chloride forms an aqueous solution  
iii) Fresh crystals of sodium carbonate,  $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$  become covered with white powder of formula  $\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}$
15. You are provided with the following:- solid lead (II) nitrate, magnesium oxide powder, dilute sulphuric (VI) acid and distilled water. Describe how you can prepare a dry sample of lead (II) sulphate
16. Use the scheme to answer the questions that follow:

- (a) Identify solid **N** .....
- (b) Write a balanced equation for the formation of **Q**
- (c) Write the formula of the complex ion formed when sodium hydroxide is added to solution **L** in excess
17. When exposed to air, crystals of hydrated sodium carbonate loses water of crystallization:-  
(i) Name this process  
(ii) Write the formula of hydrated sodium carbonate
18. A student poured sodium iodide solution into a small portion of solution **Q**, a yellow precipitate was formed.  
(i) Which ion was most likely in solution **Q**?  
(ii) Write an ionic equation leading to the formation of the yellow precipitate
19. Calcium oxide can be used as a solid drying agent for some laboratory gases. Explain
20. A piece of marble chips was strongly heated in air for about 30 minutes. Some drops of water

were added drop by drop to the product when it was still warm.

Using equation, explain:

(i) What happens when the piece of marble chips is heated?

(ii) The reaction that takes place when water is added to the final warm product.

21. Study the flow chart below and answer the questions that follow

a) Identify ;

i) gases C and B

ii) Ions likely to be presented in solid A

22. Potassium nitrate crystals in a test-tube were heated strongly for some time. State the observation made:

(a) When a glowing splint is introduced into the test-tube during the heating

(b) At the end of the heating

23. Name the process which takes place when:

(a) Anhydrous iron (III) chloride absorb water vapour from the air to form solution

(b) Zinc chloride vapour changes directly to zinc chloride solid

24. (a) Starting from solid magnesium oxide, describe how a solid sample of magnesium hydroxide can be prepared

(b) Give **one** use of magnesium hydroxide

25. The diagram below represents a set-up that was used to show that part of air is used during burning

(a) State **two** sources of errors in this experiment

26. In an experiment the following solids were provided to form three students; Ca(NO<sub>3</sub>)<sub>2(s)</sub>, NaH<sub>2</sub>PO<sub>4(s)</sub>, Mg(OH)Cl<sub>(s)</sub> and Fe(NH<sub>4</sub>)<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub> · 6H<sub>2</sub>O. They were then told to dissolve the given solids in differently in 20ml of water.

(a) Classify the given salts accordingly

(b) (i) Explain the process which takes place when FeCl<sub>3</sub> is dissolved in water

(ii) A student placed a moist litmus paper on the product in (i) above. State and explain the observation made

## Effect of an electric current on substances

1. The set-up was used to electrolyse Lead (II) bromide. Study it and answer the questions that follow;

- (a) Write an ionic equation for the reaction that occurred at the cathode  
 (b) State and explain what happened at the anode
2. When an electric current was passed through two molten substances **E** and **F** in separate voltammeters. The observations recorded below were made:-

Substance	Observation	Type of structure
<b>E</b>	Conducts electric current and a gas is formed at one of the electrodes	
<b>F</b>	Conducts an electric current and is not decomposed	

Complete the table above

3. (a) Differentiate the following terms :-  
 Electrolyte and non-electrolyte  
 (b) The diagram below is a set-up used to investigate the conductivity of electric current by some aqueous solution. Study it and answer the questions that follow;

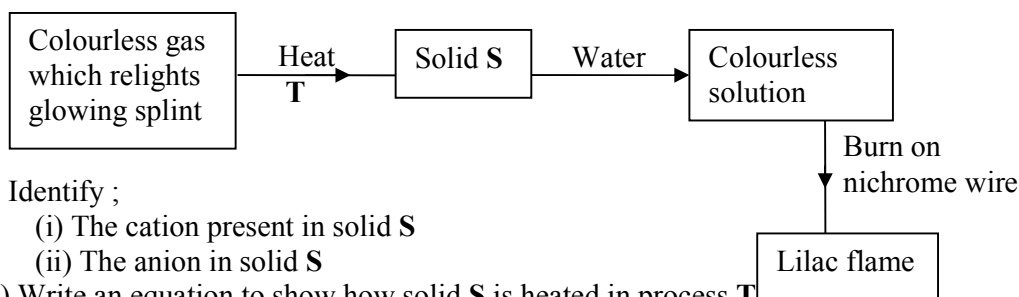

- (i) State the observation made on the bulb when each of the following solution were put onto the beaker  
 (a) Sugar solution  
 (b) (i) Salt solution  
 (ii) Classify the substance in (i) above as either electrolyte or non-electrolyte  
 (b) If in the above set-up of apparatus, the substance to be tested is Lead II Bromide, what modification should be included in the set-up?  
 (c) Write an Ionic equation at the electrodes and state the observation:-  
 Anode
4. (a) The diagram below shows the set up used to investigate the effect of an electric current on molten lead (II) bromide

- i. Explain what happens to the lead II bromide during electrolysis
  - ii. Why is it important to carry out the experiment in a fume chamber?
5. (I) Define the following terms:
- (a) Crystallization
  - (b) (i) Salting out as used in soap making
  - (ii) Starting with barium carbonate solid, dilute sulphuric acid and dilute nitric acid, describe how you would prepare dry barium sulphate solid

(iii) Study the scheme below and answer the questions which follow:

- (a) Identify ;
    - (i) The cation present in solid S
    - (ii) The anion in solid S
  - (b) Write an equation to show how solid S is heated in process T
  - (iv) Copper II chloride solution dissolves in excess ammonia solution to form a deep blue solution. Give the ion responsible for the deep blue solution
  - (v) A solution of hydrogen chloride is an electrolyte but a solution of hydrogen chloride in methylbenzene is a non-electrolyte. Explain
6. (i) State Faraday's first law of electrolysis
- (ii) The diagram below shows a set-up used for the electrolysis of molten Lead bromide:-

- State the observations that would be made at the anode and cathode as the electrolysis progressed
7. (a) (i) Describe how you would prepare pure crystals of lead II nitrate in the laboratory from lead II oxide
  - (ii) Write an equation for the reaction that takes place in (a)(i) above
  - (b) (i) State what happens when lead II nitrate is strongly heated
  - (ii) Write an equation for the reaction in b(i) above
  - (c) (i) State what is observed when ammonia solution is gradually added to a solution of

lead II nitrate until the alkali is in excess

(ii) Write an ionic equation for the reaction that takes place in (i) above

8. The diagram show an experiment for investigating electrical conduction in lead (II) fluoride. Study it and answer the questions that follow:

- (a) On the diagram  
 (i) Label the anode and the cathode  
 (ii) Show the direction of movement of electrons  
 (iii) Complete the diagram by indicating the condition that is missing but must be present for electrical conduction to take place.  
 (b) Why is it necessary to leave a gap between the cork and the boiling tube?  
 (c) State the observations that are expected at the electrodes during electrical conduction and at the experiment  
 (d) Write equations for the reactions that take place at the electrodes  
 (e) Why should this experiment be carried out in a fume chamber?

II. The table below shows the electrical conductivity of substance **A**, **B** and **C**

Substance	Solid state	Molten state	Aqueous solution
<b>A</b>	Conducts	Conducts	Not soluble
<b>B</b>	Doesn't conduct	Conducts	Conducts
<b>C</b>	Doesn't conduct	Doesn't conduct	Not soluble

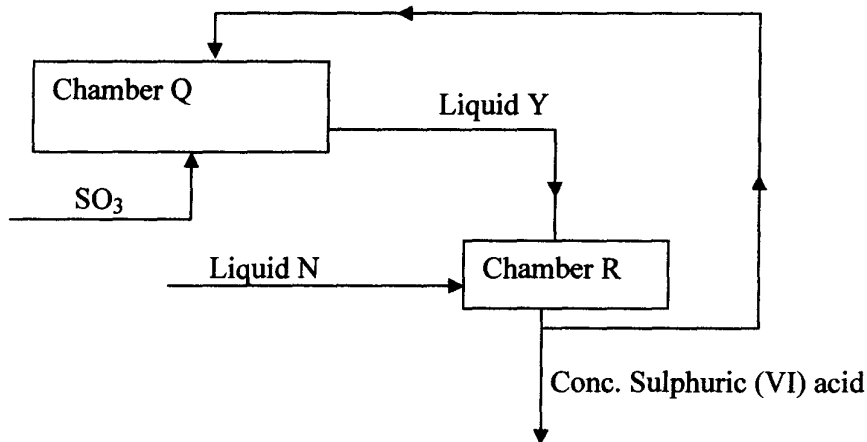

- (a) Which one of the substance is likely to be plastic?  
 (b) Explain why the substance you have given in (a) above behaves in the way it does  
 (c) Which of the substances is likely to be sodium chloride? Explain  
 (d) Give the type of structure and bonding that is present in substance **A**

9. Study the diagram below and use it to answer the questions that follow:-

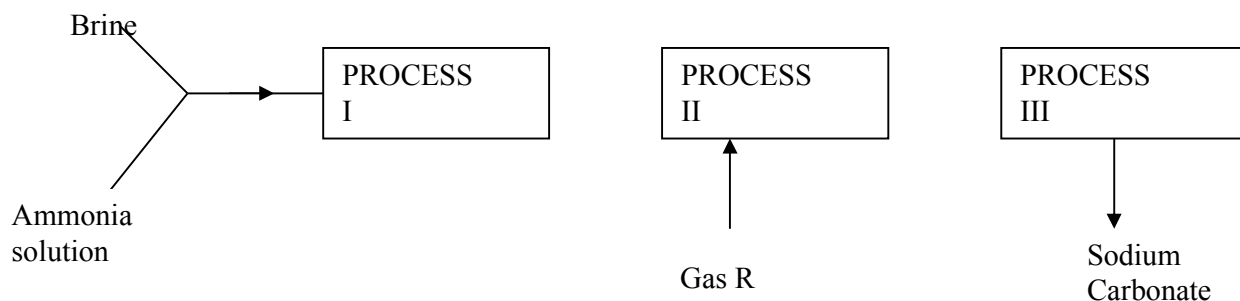

- (a) Identify electrodes **A** and **B**  
 (b) Name the product formed at the anode  
 (c) Write the electrode half equation of reaction at electrode **A**
10. Explain the differences in electrical conductivity between melted sodium chloride and liquid mercury
11. Below is part of a flow diagram for the contact process:

- (a) Name :  
 I. Liquid **Y** .....  
 II. Liquid **N**.....
- (b) Write the equation for the reaction taking place in;  
 I. Chamber **Q**  
 II. Chamber **R**
12. In an experiment to investigate the conductivity of substances, a student used the set-up shown below.  
 The student noted that the bulb did not light.  
 a) What had been omitted in the set up.  
 b) Explain why the bulb lights when the omission is corrected.

### Carbon and its compounds

1. (a) State **one** use of graphite  
 (b) Both graphite and diamond are allotropes of element Carbon. Graphite conducts electricity whereas diamond does not. Explain
2. Below is a simplified scheme of solvay process. Study it and answer the questions that follow:

- a) Identify gas **R**.

- b) Write an equation for the process III.  
 c) Give **one** use of sodium carbonate.
3. A burning magnesium continues to burn inside a gas jar full of carbon (IV) oxide. Explain.  
 4. The diagram below shows a jiko when in use

- (a) Identify the gas formed at region **H**  
 (b) State and explain the observation made at region **G**
5. Study the diagram below and use it to answer the questions that follow.

- (a) State the observation made in the combustion tube.  
 (b) Write an equation for the reaction that took place in the combustion tube  
 (c) Give **one** use of **P**
6. (a) Identify **two** substance that are reacted to regenerate ammonia gas in the solvay process  
 (b) Write down a balanced chemical equation for the reaction above
7. When the oxide of element **H** was heated with powdered Carbon, the mixture glowed and Carbon (IV) oxide was formed. When the experiment was repeated using the oxide of element **J**, there was no apparent reaction  
 (a) Suggest **one** method that can be used to extract element **J** from its oxide  
 (b) Arrange the elements **H**, **J** and Carbon in order of their decreasing reactivity
8. (i) Diamond and silicon (IV) Oxide have a certain similarity in terms of structure and bonding. State it  
 (ii) State **one** use of diamond
9. (a) What is allotropy?  
 (b) Diamond and graphite are allotropes of Carbon. In terms of structure and bonding explain why graphite conducts electricity but not diamond
10. The diagram below shows a charcoal stove with different regions

- (a) Write an equation for the formation of the product in region **B**  
 (b) How would one avoid the production of the product at **B**? Give a reason for your answer

11. Study the diagram below and answer the questions that follow:

- (a) Explain the observation made in the combustion tube during the experiment  
 (b) Write an equation for the reaction that takes place in the combustion tube
12. Diamond and graphite are allotropes of carbon:-  
 (a) What is meant by allotropes?  
 (b) How do they differ in their structure and bonding
13. Study the experimental set-up below:

- a) State **two** observations made in the set up as the experiment progressed  
 b) By use of a chemical equation, explain the changes that occurred in the boiling tube  
 c) Why was it necessary to burn the excess gas?
14. The diagram below shows the heating curve of a pure substance. Study it and answer the questions that follow:

points A and C

(d) The substance under test is definitely not water; Give a reason for this

(e) What would happen to the melting point of this substance if it were contaminated with sodium chloride?

(f) What happens to the temperature between points B and C?

15. Study the set-up below and answer the questions that follow:

(a) (i) Name Gas X .....

(ii) State the effect of releasing gas X to the environment

(b) Write down equations for the reactions taking place in;

(i) Tube I

(ii) Tube II

(iii) Flask

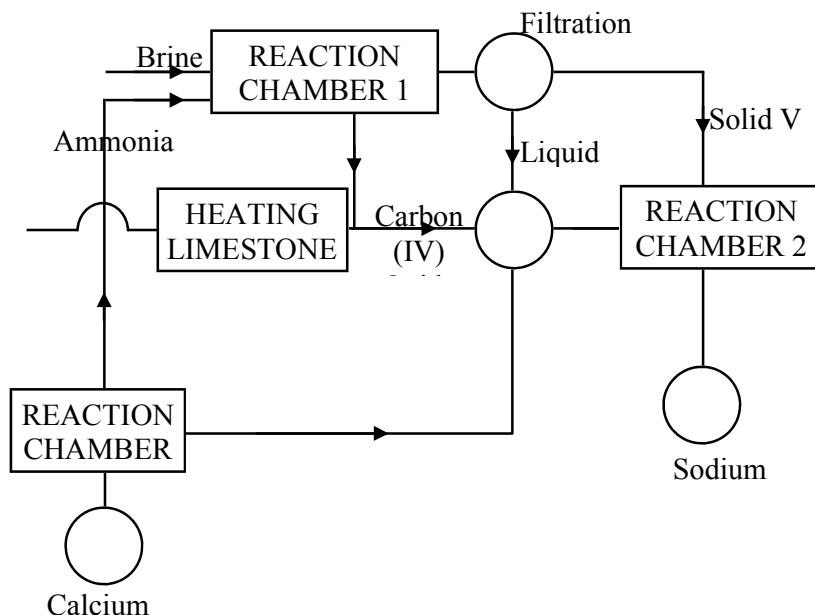

(c) State the observation made in tube III

(d) Write down an equation for the reaction which could be used to generate Carbon (IV) Oxide for the above set up

(e) Name the reagents used to generate gas x in the laboratory

(f) Complete the diagram above to show how excess gas x can be collected

16. The figure below shows the stages in the manufacture of sodium carbonate. Study the diagram below and use it to answer the questions that follow.

- a) (i) Name **three** starting materials in the manufacturer of sodium carbonate.  
(ii) Which substances are recycled in this process?  
(iii) Identify the chambers in which the recycled substances are regenerated.  
(iv) Name the substances **U** and **V**.
- b) Give an equation for the reaction which occurs:  
(i) In the reaction chamber 1  
(ii) When solid V is heated.  
(iii) In the reaction chamber 3.
- c) State **one** commercial use for  
(i) Sodium carbonate.
17. The set-up below was used to prepare dry carbon (II) Oxide gas. use it to answer the questions below it:

- (a) (i) State **two** mistakes committed in the set-up arrangement above
- (ii) The student produced carbon (IV) oxide gas from the reaction between Lead (II) Carbonate and dilute hydrochloric acid. The gas was produced for a short time and the reaction came to a stop. Explain
- (iii) Write the equation for the reactions taking place in the combustion tube and the conical flask:  
Combustion tube:.....

Conical flask .....

- (iv) State **one** use of carbon (IV) Oxide gas apart from fire extinguisher
- (v) Give **two** properties that make carbon (IV) Oxide to be used as fire extinguisher
- (b)  $\text{PbO}_{(s)} + \text{CO}_{(g)} \longrightarrow \text{Pb}_{(s)} + \text{CO}_{2(g)}$   
Which property of carbon (II) Oxide is demonstrated by the above equation?
- (c) Aluminium carbonate does not exist. Give a reason
- (d) Ammonium carbonate decomposes when heated. Write a chemical equation to represent this decomposition
18. State and explain the observation made when a piece of charcoal is dropped in a jar containing concentrated nitric (V) acid
19. When Carbon (IV) oxide is passed through lime water, a white precipitate is formed but when excess Carbon (IV) Oxide is passed, the white precipitate disappears;
- (a) Explain why the white precipitate disappears
- (b) Give an equation for the reaction that takes place in (a) above
20. The set-up below was used to prepare a carbon (II) oxide gas.

- (a) Give the name of substance **A** .....
- (b) Complete the diagram to show how the gas can be collected
- (c) Write the equation for the reaction

## Gas laws

1. A sample of unknown compound gas **X** is shown by analysis to contain Sulphur and Oxygen. The gas requires 28.3 seconds to diffuse through a small aperture into a vacuum. An identical number of oxygen molecules pass through the same aperture in 20seconds. Determine the molecular mass of gas **X** (O= 16, S= 32)
2. (a) State Graham's Law of diffusion
- (b) Gas **V** takes 10 seconds to diffuse through a distance of one fifth of a meter. Another gas **W** takes the same time to diffuse through a distance of 10 cm. if the relative molecular mass of gas **V** is 16.0; calculate the molecular mass of **W**
3. (a) State Charles' Law
- (b) The volume of a sample of nitrogen gas at a temperature of 291K and  $1.0 \times 10^5$  Pascals was  $3.5 \times 10^{-2} \text{m}^3$ . Calculate the temperature at which the volume of the gas would be  $2.8 \times 10^{-2} \text{m}^3$  at  $1.0 \times 10^5$  pascals.
4.  $60 \text{ cm}^3$  of oxygen gas diffused through a porous partition in 50 seconds. How long would it take  $60 \text{ cm}^3$  of sulphur (IV) oxide gas to diffuse through the same partition under the sane conditions? (S = 32.0, O = 16.0)
5. (a) State Graham's law of diffusion

- (b)  $30\text{cm}^3$  of hydrogen chloride gas diffuses through a porous pot in 20 seconds. How long would it take  $42\text{cm}^3$  of sulphur(IV) oxide gas to diffuse through the same pot under the same conditions (H = 1 C = 12 S = 32 O = 16)
6. a) State **Boyle's law**  
 b) Sketch a graph that represents Charles' law  
 c) A gas occupied a volume of  $250\text{cm}^3$  at  $-23^\circ\text{C}$  and 1 atmosphere. Determine its volume at  $127^\circ\text{C}$  when pressure is kept constant.
7. A factory produces Calcium Oxide from Calcium Carbonate as shown in the equation below:-

- (a) What volume of Carbon (IV) Oxide would be produced from 1000kg of Calcium Carbonate at s.t.p (Ca = 40, C = 12, O = 16, Molar gas volume at s.t.p =  $22.4\text{dm}^3$ )
8. A fixed mass of gas occupies  $200\text{cm}^3$  at a temperature of  $23^\circ\text{C}$  and pressure of 740mmHg. Calculate the volume of the gas at  $-25^\circ\text{C}$  and 780mmHg pressure
9. Gas **K** diffuses through a porous material at a rate of  $12\text{cm}^3 \text{ s}^{-1}$  where as **S** diffuses through the same material at a rate of  $7.5\text{cm}^3 \text{ s}^{-1}$ . Given that the molar mass of **K** is 16, calculate the molar mass of **S**
10. (a) State Gay Lussac's law
11. (a) What is the relationship between the rate of diffusion of a gas and its molecular mass?  
 (b) A sample of Carbon (IV) Oxide takes 200 seconds to diffuse across a porous plug. How long will it take the same amount of Carbon (II) Oxide to diffuse through the same plug? (C=12, O=16)
12. Below are structures of particles. Use it to answer questions that follow. In each case only electrons in the outermost energy level are shown

**key**

P = Proton

N = Neutron

X = Electron

- (a) Identify the particle which is an anion  
 (b) Choose a pair of isotopes. Give a reason
13. The figure below shows two gases **P** and **Q** diffusing from two opposite ends 18 seconds after the experiment

- (a) Which of the gases has a lighter density?  
 (b) Given that the molecular mass of gas **Q** is 17, calculate the molecular mass of **P**

14. Identify the particles that facilitate the electric conductivity of the following substances
  - (i) Sodium metal
  - (ii) Sodium Chloride solution
  - (iii) Molten Lead Bromide
15. Gas **B** takes 110 seconds to diffuse through a porous pot, how long will it take for the same amount of ammonia to diffuse under the same conditions of temperature and pressure? (RMM of **B** = 34 RMM of ammonia = 17)
16. A gas occupies 5dm<sup>3</sup> at a temperature of -27°C and 1 atmosphere pressure. Calculate the volume occupied by the gas at a pressure of 2 atmospheres and a temperature of 127°C
17. A fixed mass of gas occupies 200 cm<sup>3</sup> at a temperature of 23<sup>0</sup>c and a pressure of 740 mm Hg. Calculate the volume of the gas at -25<sup>0</sup>c and 790 mm Hg pressure.
18. (a) State the Graham's law  
 (b) 100cm<sup>3</sup> of Carbon (IV) oxide gas diffused through a porous partition in 30seconds. How long would it take 150cm<sup>3</sup> of Nitrogen (IV) oxide to diffuse through the same partition under the same conditions? (C = 12.0, N = 14.0, O = 16.0)

## The mole

1. In an experiment magnesium ribbon was heated in air. The product formed was found to be heavier than the original ribbon. Potassium manganate (VII) was on the other hand, heated in air and product formed was found to be lighter. Explain the differences on the observation made
2. In a filtration experiment 25cm<sup>3</sup> of a solution of Sodium Hydroxide containing 8g per litre was required for complete neutralization of 0.245g of a dibasic acid. Calculate the relative molecular mass of the acid (Na = 23.0, O = 16, H= 1)
3. **D** grams of Potassium hydroxide were dissolved in distilled water to make 100cm<sup>3</sup> of solution. 50cm<sup>3</sup> of the solution required 50cm<sup>3</sup> of 2.0M nitric acid for complete neutralization. Calculate the mass D of Potassium hydroxide (RFM of KOH = 56)
 
$$\text{KOH}_{(\text{aq})} + \text{HNO}_{3(\text{aq})} \longrightarrow \text{KNO}_{3(\text{aq})} + \text{H}_2\text{O}_{(\text{l})}$$
4. When excess dilute hydrochloric acid was added to sodium sulphite, 960cm<sup>3</sup> of sulphuric (IV) Oxide gas was produced. Calculate the mass of sodium sulphate that was used. (Molar gas volume = 24000cm<sup>3</sup> and Molar mass of sulphite = 126g)
5. The equation of the formation of iron (III) chloride is
 
$$2\text{Fe}_{(\text{s})} + 3\text{Cl}_{2(\text{g})} \longrightarrow 2\text{FeCl}_3$$
 Calculate the volume of chlorine which will react with iron to form 0.5g of Iron (III) chloride. (Fe = 56 Cl=35.5). Molar gas volume at 298K = 24dm<sup>3</sup>)
6. 15.0cm<sup>3</sup> of ethanoic acid (CH<sub>3</sub>COOH) was dissolved in water to make 500cm<sup>3</sup> of solution. Calculate the concentration of the solution in moles per litre [C=12, H = 1, O = 16, density of ethanoic acid is 1.05g/cm<sup>3</sup>]
7. When 1.675g of hydrated sodium carbonate was reacted with excess hydrochloric acid, the volume carbon (IV) oxide gas obtained at room temperature and pressure was 150cm<sup>3</sup>. Calculate the number of moles of water of crystallization in one mole of hydrated sodium carbonate:- (Na=23, H=1, C=12, O=16, MGV at R.T.P = 24000cm<sup>3</sup>)
8. How many chloride ions are present in 1.7g of magnesium chloride crystals? (Avogadro's constant = 6.0 x 10<sup>23</sup>, Mg = 24, Cl = 35.5)
9. 0.84g of aluminium reacted completely with chlorine gas. Calculate the volume of chlorine gas used (Molar gas volume is 24dm<sup>3</sup>, Al = 27)
10. 6.4g of a mixture of sodium carbonate and sodium chloride was dissolved in water to make 50cm<sup>3</sup> solution. 25cm<sup>3</sup> of the solution was neutralized by 40cm<sup>3</sup> of 0.1M HCl<sub>(aq)</sub>. What is the percentage of sodium chloride in the solid mixture?

11. An unknown mass,  $x$ , of anhydrous potassium carbonate was dissolved in water and the solution made up to  $200\text{cm}^3$ .  $25\text{cm}^3$  of this solution required  $18\text{cm}^3$  of  $0.22\text{M}$  nitric (V) acid for complete neutralization. Determine the value of  $x$ . ( $K=39.0$ ,  $C=12.0$ ,  $O=16.0$ )
12. Calculate the volume of oxygen gas used during the burning of magnesium ( $O=16$ , molar gas volume =  $24,000\text{cm}^3$  at room temperature)
13. A hydrated salt has the following composition by mass. Iron 20.2 %, oxygen 23.0%, sulphur 11.5%, water 45.3%
- Determine the formula of the hydrated salt ( $\text{Fe}=56$ ,  $\text{S}=32$ ,  $\text{O}=16$ ,  $\text{H}=11$ )
  - $6.95\text{g}$  of the hydrated salt in **(i)** above were dissolved in distilled water and the total volume made to  $250\text{cm}^3$  of solution. Calculate the concentration of the resulting salt solution in moles per litre. (Given that the molecular mass of the salt is 278)
14. (i) Lead (II) ions react with iodide ions according to the equation;

- $300\text{cm}^3$  of a  $0.1\text{M}$  solution of iodide ions was added to a solution containing excess lead II ions. Calculate the mass in grams of lead II iodide formed
- Identify the colour of the product formed in **(d) (i)**

15. a) The diagram below represents part of the structure of sodium chloride crystal

The position of one of the sodium ions in the crystal is shown as;

- On the diagram, mark the positions of the other three sodium ions
  - The melting and boiling points of sodium chloride are  $801\text{C}$  and  $1413\text{C}$  respectively. Explain why sodium chloride does not conduct electricity at  $25\text{C}$ , but does not at temperatures between  $801\text{C}$  and  $1413\text{C}$
- b) Give a reason why ammonia gas is highly soluble in water
- c) The structure of ammonium ion is shown below;

Name the type of bond represented in the diagram by  $\text{N} \longrightarrow \text{H}$

- d) Carbon exists in different crystalline forms. Some of these forms were recently discovered in soot and are called fullerenes
- What name is given to different crystalline forms of the same element
  - Fullerenes dissolve in methylbenzene while the other forms of carbon do not. Given that soot is a mixture of fullerenes and other solid forms of carbon, describe how crystals of fullerenes can be obtained from soot

- iii) The relative molecular mass of one of the fullerenes is 720. What is the molecular mass of this fullerene
16. Calculate the volume of oxygen gas used during the burning of magnesium (O = 16, molar gas volume = 24,000cm<sup>3</sup> at room temperature)
17. Study the information in the table below and answer the questions that follow

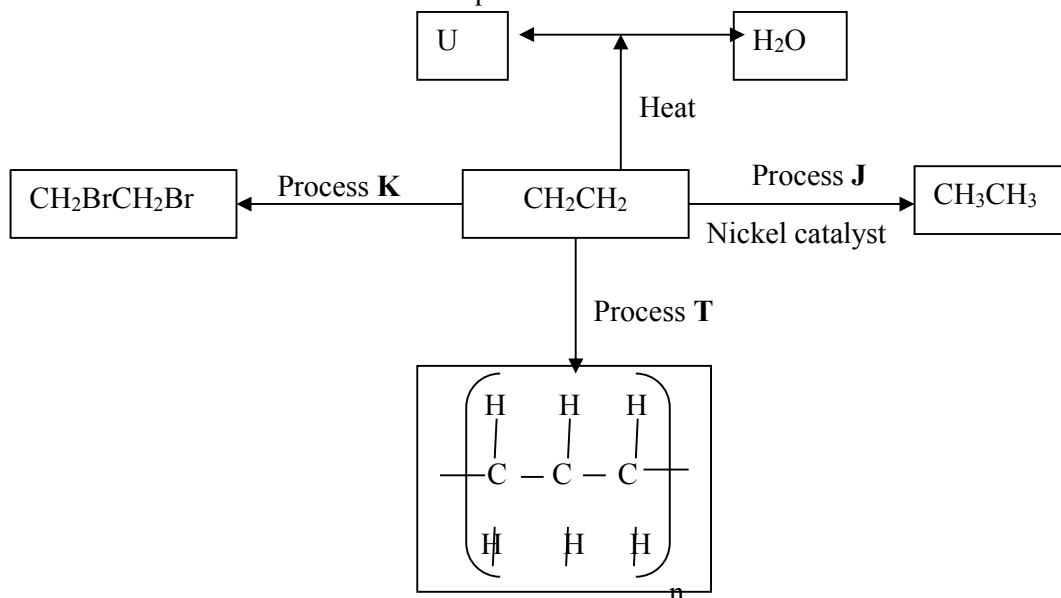

Number of carbon atoms per molecule	Relative molecular mass of the hydrocarbon
2	28
3	42
4	56

- i) Write the general formula of the hydrocarbons in the table
- ii) Predict the relative atomic mass of the hydrocarbons with 5 carbon atoms
- iii) Determine the relative atomic mass of the hydrocarbon in (ii) above and draw its structural formula (H=1.0, C=12.0)
18. A hydrated salt has the following composition by mass. Iron 20.2 %, oxygen 23.0%, sulphur 11.5%, water 45.3%
- i) Determine the formula of the hydrated salt (Fe=56, S=32, O=16, H=11) (3 mks)
- ii) 6.95g of the hydrated salt in **c(i)** above were dissolved in distilled water and the total volume made to 250cm<sup>3</sup> of solution. Calculate the concentration of the resulting salt solution in moles per litre. (Given that the molecular mass of the salt is 278)
19. a) Galvanized iron sheets are made by dipping the sheets in molten Zinc.
- i) Explain how zinc protects iron from rusting
- ii) Name the process applied in galvanization of iron with zinc
20. Calculate the percentage of copper in 1.0g of the alloy (Cu = 63.5 Mg = 24)
21. A factory uses nitric acid and ammonia gas as the only reactant for the preparation of the fertilizer if the daily production of the fertilizer is 4800kg. Calculate the mass of ammonia gas used daily (N = 14.0, O= 16.0, H = 1.0)
22. Calculate the volume of sulphur (VI) oxide gas that would be required to produce 178kg of oleum in step 3 molar gas volume at s.t.p = 22.4 litres H = 1 O = 16 S = 32
23. Using the answer in **d (ii)** above, determine:
- i) The volume of 1M nitric acid that would react completely with one mole of copper (Cu = 63.5)
- ii) The volume of Nitrogen (IV) oxide gas produced when one mole of copper reacts with excess 1M nitric acid at room temperature
24. A sample of biogas contains 35.2% by mass of methane. A biogas cylinder contains 5.0kg of the gas. Calculate:
- (i) Number of moles of methane in the cylinder (Molar mass of methane = 16)
- (ii) Total volume of carbon (IV) oxide produced by the combustion of methane in the cylinder (Molar gas volume = 24.0dm<sup>3</sup> at room temperature and pressure)
25. 0.84g of aluminium were reacted completely with chlorine gas. Calculate the volume of chlorine gas used. (Molar gas volume is 24dm<sup>3</sup>, Al = 27)
26. 3.52g of Carbon (IV) Oxide and 1.40g of water are produced when a mass of a hydrocarbon is completely burnt in oxygen. Determine the empirical formula of the hydrocarbon; (H = 1 , C= 12, O = 16)
27. Calculate the number of water molecules when 34.8g Na<sub>2</sub>CO<sub>3</sub> xH<sub>2</sub>O is heated and 15.9g of anhydrous Na<sub>2</sub>CO<sub>3</sub> obtained (H=1, O=16, Na= 23, C = 12)
28. A weighed sample of crystalline sodium carbonate (Na<sub>2</sub>CO<sub>3</sub>nH<sub>2</sub>O) was heated in a crucible until there was no further change in mass. The mass of the sample reduced by 14.5%. Calculate the number of moles (n) of water of crystallization (Na = 23, O = 16, C = 12, H = 1)
29. In a reaction 20cm<sup>3</sup> of 0.1 M Sodium Carbonate completely reacted with 13cm<sup>3</sup> of dilute

- sulphuric acid. Find the molarity of the sulphuric acid used.
30. An organic compound P contains 68.9% carbon, 13.5% hydrogen and 21.6% oxygen. The relative formula mass of P is 74. Determine its molecular formula. [C=12, H=1, O=16]
31. Campers GAZ cylinder contains about 1.12dm<sup>3</sup> of butane measured at 0° and 1atm. Given that 25% of heat is lost, what is the maximum volume of water at room temperature which can be boiled to 100°C in order to make some coffee?
- $$\text{C}_4\text{H}_{10}(\text{g}) + 6\frac{1}{2}\text{O}_2(\text{g}) \longrightarrow 4\text{CO}_2(\text{g}) + 5\text{H}_2\text{O}(\text{l}); \Delta H^\theta = -3,000\text{KJmol}^{-1}$$
- (Specific heat capacity of water = 4.2J g<sup>-1</sup>C<sup>-1</sup>; density of water 1gcm<sup>-3</sup> Molar gas volume 22.4l at s.t.p)
32. An aqueous solution containing anhydrous sodium carbonate was prepared by dissolving 19.6g of the salt in 250cm<sup>3</sup> of distilled. Calculate the volume of 2M of magnesium chloride solution required to precipitate all the carbonate ions in the solution. (Na=23, C= 12; O = 16; Mg = 24; Cl =35.5)
33. 10.08g of ethanedioic acid (H<sub>2</sub>C<sub>2</sub>O<sub>4</sub>·xH<sub>2</sub>O) crystals were dissolved in water and made to 1dm<sup>3</sup> solution. 25.0cm<sup>3</sup> of this solution was completely neutralized by 20cm<sup>3</sup> of 0.2M sodium hydroxide solution.
- Calculate**
- Molarity of the acid
  - the value of x in H<sub>2</sub>C<sub>2</sub>O<sub>4</sub>·xH<sub>2</sub>O acid
34. 1.6g of magnesium metal is reacted with excess hydrochloric acid. Calculate the volume of hydrogen gas produced (Molar gas volume at stp = 22.4dm<sup>3</sup> Mg=24)
35. 60 litres of sulphur(IV) oxide were made to react with 40 litres of oxygen.
- Which reactant was in excess and by how much?
  - What is the volume of the product?
36. During welding of cracked railway lines by thermite 12.0g of oxide of iron is reduced by aluminium to 8.40g of iron. Determine the empirical formula of the oxide (Fe= 56.0, O= 16.0)

## Organic chemistry 1

1. Use the flow chart below to answer the questions that follow:

- What observation would be made in process K?
- Name another conditions necessary for process J to take place

- (c) Give the name of substance **V**
2. But-2-ene undergoes hydrogenation according to the equation given below

- (a) Name the product formed when but-2-ene reacts with hydrogen gas  
 (b) State **one** industrial use of hydrogenation
3. Write the structures of the following compounds:-  
 (a) But-2-yne  
 (b) 2,2-dimethylpropane
4. a) What is meant by Isomerism?  
 b) Draw and name **two** Isomers of butane.
5. Study the information in the table below and answer the questions that follow:

Ion	No. of protons	No. of electrons
P <sup>3-</sup>	7	10
Q <sup>+</sup>	19	18
R <sup>2+</sup>	12	10

- a) Write the electron arrangement of element P.  
 b) Give the group and period to which elements Q and R respectively.  
 Q .....
- R .....
6. Compound **W** reacted with chlorine to form compound **X** only. The structural formula of **X** is shown below:
- $$\begin{array}{ccccccc} \text{CH}_3 & - & \text{CH} & - & \text{CH} & - & \text{CH}_3 \\ & & | & & | & & \\ & & \text{Cl} & & \text{Cl} & & \end{array}$$
- (a) Give the structural formula and name of compound **W**  
 (b) Name compound **X** .....
7. In petrol chemical industries, long chain alkanes are broken down into simpler substances in a process called cracking
- a) Why is cracking necessary?  
 b) State the **two** conditions required in cracking  
 c) Draw the structure of 1-chloro-2, 2-dimethylpropane
8. In a reaction an alcohol **K** was converted to hex-1-ene
- a) Name reagent and condition necessary for the reaction in **6 (a)** above to occur
9. (a) Give the IUPAC systematic names of compounds **Q** and **R**  
**Q**: CH<sub>2</sub>CHClCHICH<sub>2</sub>CH<sub>3</sub>  
**R**: CH<sub>3</sub>CHClCH<sub>2</sub>ClCH<sub>3</sub>
- (b) The organic compounds **Q** and **R** in (b) above, are formed when one mole of hydrocarbon **N** reacts with two moles of hydrogen chloride gas;
- (i) Structural formula of **N**  
 (ii) The IUPAC systematic name of **N**
10. Distinguish between the isotopes and isomers
11. Polymerisation of ethene takes place as shown in the equation below

- Name the type of polymerisation undergone by ethene in the reaction above
12. (a) State Gay Lussac's law
  13.  $10\text{cm}^3$  of methane ( $\text{CH}_4$ ) gas is exploded with  $150\text{cm}^3$  of air containing 20% oxygen and 80% nitrogen. The products were allowed to cool to room temperature. What will be the total volume of the gases at the end of the reaction?
  14. Give the open structures of:-
    - (i) 3-chlorohex-1-yne
    - (ii)  $\text{CH}_3\text{OH}$
  15. A fixed mass of gas occupies  $105\text{cm}^3$  at  $-14^\circ\text{C}$  and  $650\text{mmHg}$  pressure. At what temperature in degrees Celsius will it have a volume of  $15\text{cm}^3$  if the pressure is adjusted to  $690\text{mmHg}$  pressure?
  16. Write an equation for the reaction that takes place between ethene and concentrated Sulphuric (VI) acid
  17. Petroleum (crude oil) is a mixture of several compounds which are separated in a Changamwe refinery by means of apparatus as shown below:

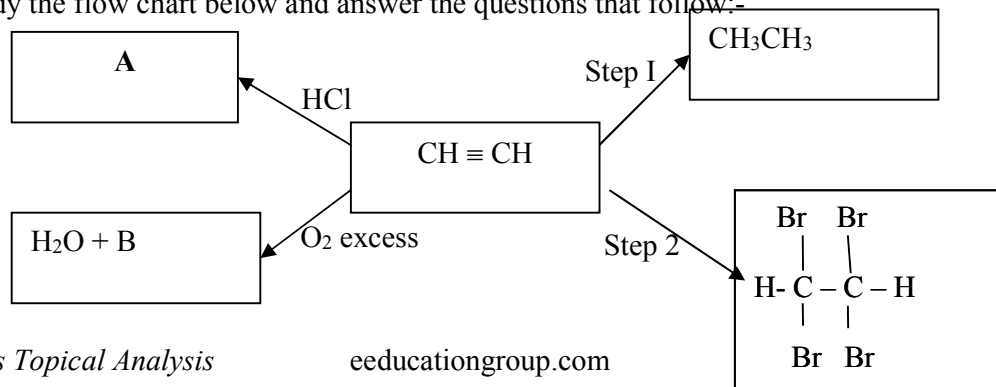

- (a)
  - (i) What is the name of the apparatus above
  - (ii) What is the name of the process which is used in separation of crude oil
  - (iii) What physical property of compounds in the mixture does the separation depend
  - (iv) Use the letter A to G to describe where the following could be formed:
    - I. The fraction that represents gases
    - II. The fraction that represents the largest molecules
    - III. The fraction that represents liquids with the lowest boiling points
- (b) State the use of product produce at
 

G.....

C.....
- (c) Draw apparatus for the separation of the product produce at D and water

18. Study the flow chart below and answer the questions that follow:-

- (i) Give the name of the substance  $\text{CH} \equiv \text{CH}$  .....
- (ii) To which group of hydrocarbons does the substance in (i) above belong?
- (iii) Give **two** reagents that can be used to prepare the substance named in (i) above
- (iv) State **two** physical properties of the substances in (i) above
- (v) Give the names to the process in step I and 2
- (vi) Write an equation to show how substance **A** is formed
- (iv) Identify substance **B** .....

19. The diagram below represents a large-scale fractional distillation plant used to separate the components **A**, **B**, **C** and **D** in a mixture

- (a) The components have the following average relative molecular masses not necessarily in that order; 282, 184, 44 and 128.
- (a) (i) What is the physical state of **B** at the position marked **Q**?
- (ii) Which component has an average relative molecular mass of 128? Explain
- (iii) State with a reason whether **C** is pure or impure
- (iv) Explain how the mixture is separated into its components
- (v) Name **two** naturally occurring mixtures that are separated using this process
20. The diagram below represents a large-scale fractional distillation plant used to separate the components **A**, **B**, **C** and **D** in a mixture

- (a) The components have the following average relative molecular masses not necessarily in that order; 282, 184, 44 and 128.
- (a) (i) What is the physical state of **B** at the position marked **Q**?
- (ii) Which component has an average relative molecular mass of 128? Explain
- (iii) State with a reason whether **C** is pure or impure
- (iv) Explain how the mixture is separated into its components

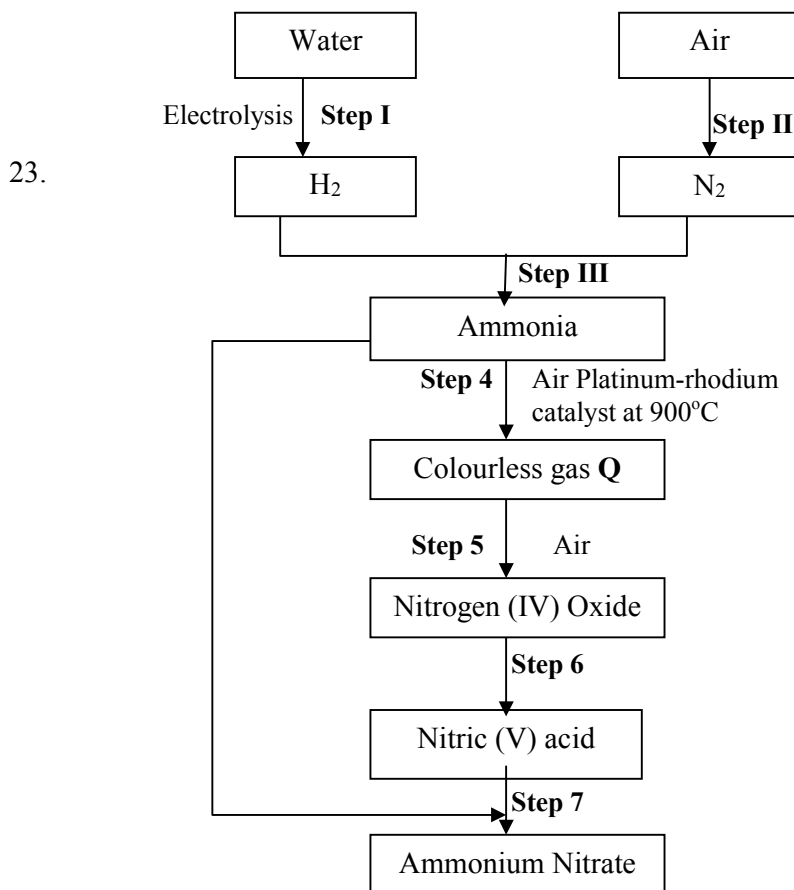

- (v) Name **two** naturally occurring mixtures that are separated using this process
21. a) The table below gives information about the major constituents of crude oil. Study it and answer the questions that follow:

Constituent	Boiling point °C
Gases	Below 40
Petrol	40-175
Kerosene	175-250
Diesel	250-350
Lubricating oil	350-400
Bitumen	Above 400

- i) Which of the constituents of crude has molecules with the highest number of carbon atoms? Explain
- ii) Name the process you would use to separate a mixture of petrol and diesel and explain how the separation takes place
- iii) Explain why the constituents of crude oil do not have a sharp boiling point
- iv) Name the gas that is likely to be a constituent of crude oil and write its formula
- b) i) What condition could cause a poisonous gas to be formed when kerosene is burnt. Explain
- ii) Give **one** use of bitumen
22. (a) The set-up below was used to prepare ethyne gas

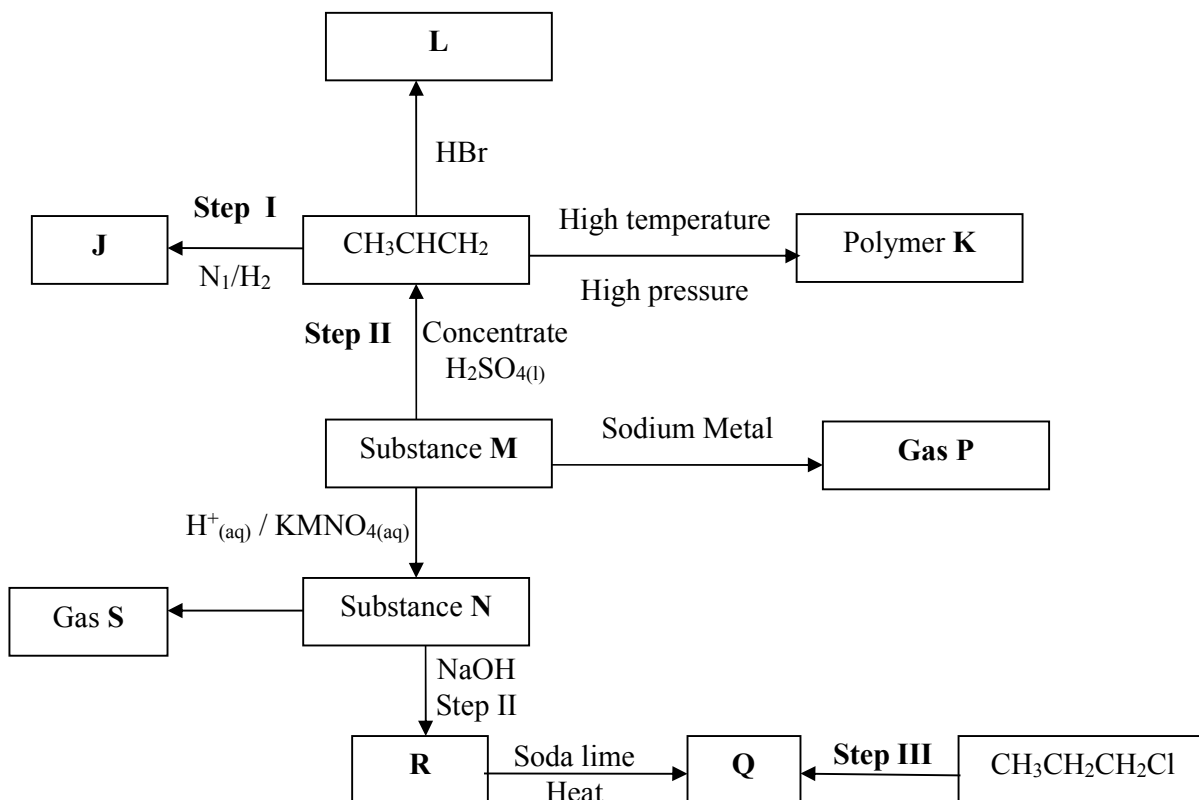

- (i) Identify solid **E**
- (ii) Complete the diagram to show how the gas can be collected
- (iii) Write an equation to show how the gas is formed
- (iv) Complete the equation below: )
- $$\text{C}_2\text{H}_2 + 2\text{I}_2 \longrightarrow$$
- (v) What is the role of sand in the experiment?
- (b) (i) Explain the meaning of esterification
- (ii) Complete the equation below :
- $$\text{CH}_3\text{COOCH}_3 + \text{H}_2\text{O}$$
- (iii) What type of reaction is occurring above
- (c) Given the reaction:
- $$\text{C}_8\text{H}_{18} \xrightarrow{\text{Solid F}} \text{N} + \text{C}_2\text{H}_4$$
- (i) Identify substance:
- F**..... **N**.....
- (ii) Name the process represented above?
- (d) Give **one** use of substance **N**

- (i) Name another source of hydrogen apart from electrolysis of water  
(ii) What conditions are necessary for **step III** to occur?  
(iii) Write the equation for the formation of colourless gas **Q**  
(iv) Give **one** use of nitric (V) acid
- (b) State and explain the observations that would be made if a sample of copper metal is heated with concentrated nitric (V) acid
24. (a) Give the systematic names of the following compounds:-  
(i)  $\text{CH}_2 = \underset{\text{Br}}{\text{C}} - \text{CH}_3$  .....
- (ii)  $\text{CH}_3\text{CH}_2\text{CH}_2\text{C} \equiv \text{CH}$  .....
- (b) State the observations made when butan-1-ol reacts with:-  
(i) Acidified potassium dichromate (VI) solution  
(ii) Potassium metal
- (c) Ethanol obtained from glucose can be converted to ethene as shown below:-  
 $\text{C}_6\text{H}_{12}\text{O}_6 \xrightarrow{\text{Step I}} \text{C}_2\text{H}_5\text{OH} \xrightarrow{\text{Step II}} \text{C}_2\text{H}_4$
- Name and describe the processes that take place in steps **I** and **II**
- (d) Compounds **A** and **B** have the same molecular formula  $\text{C}_3\text{H}_6\text{O}_2$ . Compound **A** liberates Carbon (IV) Oxide on addition of aqueous sodium carbonate while compound **B** does not. Compound **B** has a sweet smell. Draw the possible structures of:-
- (e) Give **two** ways how the disposal of polymers such as polychloroethene by burning pollutes the environment
25. (a) Name the following compounds  $(\text{CH}_3)_3\text{CCH}_2\text{CH}_2\text{CH}_3$   
Use the flow chart below to answer the questions that follow:-

(b) (i) Name the following :-

- I. Gas **S** .....
- II. Gas **P** .....
- III. **J** .....

(ii) Name the processes involved in the following steps:

- I. Step I .....
- II. Step II .....
- III. Step III .....

(iii) Write a chemical equation for the complete combustion of substance **M**

(iv) Name the condition and reagent in step III

Condition .....

Reagent .....

(v) Calculate the mass of salt **R** that would be formed by using 21.9 tonnes of **N** when it reacts with excess sodium hydroxide (C= 12.0 H= 1.0 Na = 23)

(vi) Draw the structure of polymer **K**

II. State **one** use of the above polymer

(c) (i) Name the class to which the following cleansing agents belong:-

i)  $\text{R} - \text{COONa}^+$  .....

(ii)  $\text{R} - \text{C}_6\text{H}_4 - \text{O} - \text{SO}_3\text{Na}$  .....

II. Which cleaning agent above is not environmental friendly? Explain

26. The molecular formula of a hydrocarbon is  $\text{C}_6\text{H}_{14}$ . The hydrocarbon can be converted into two other hydrocarbon as shown by the equation below:

- (i) Name and draw the possible structural formula of **X**  
 (ii) State and explain the observations that would be made if a few drops of bromine water were added to a sample of **X**  
 (iii) Write an equation for the complete combustion of  $C_3H_8$

27. (a) Give the names of the following  
 (i)  $CH_3CH_2CH_3$   
 (ii)  $CH_3CCCH_3$   
 (b) Ethene is used in making polyethene bag in a process called polymerization  
 (i) Name the type of polymer that is formed when ethane polymerise  
 (ii) Describe a simple chemical test that can be used to identify ethane gas in the laboratory  
 (c) Study the information in the table below and answer the questions that follow:-

No. of carbon atoms	R.M.M of the Hydrocarbon
2	28
3	42
4	56

- i. Write the general formula of the hydrocarbons in the table above  
 ii. Determine the molecular of a hydrocarbon with 5 carbon atoms and draw its structural formula  
 Molecular formula  
 Structural formula

- (d) Study the scheme below and answer the questions that follow

- (i) Name the reagents in  
 Step I .....  
 Step II .....  
 Step IV .....
- (ii) Write an equation for the complete combustion of  $CH \equiv CH$   
 (iii) Give **two** uses of  $CH_4$

28. Give the systematic names of the following compounds;

29. Study the data given in the following table and answer the questions that follow. The letters are not the actual symbols of elements.

Element	Number of protons	Melting point	Bpt °C
<b>A</b>	11	98	890
<b>B</b>	12	650	1110
<b>C</b>	13	60	2470
<b>D</b>	14	1410	2360
<b>E</b>	15	442	280
<b>F</b>	16	590	445

		119	
<b>G</b>	17	-101	-35
<b>H</b>	18	-189	-186

- (i) State and explain the trend in melting point in **A B C**  
(ii) Explain why the melting point and boiling points of element **D** is the highest  
(iii) Explain why the element represented by letter **E** has two melting point values  
(iv) Write down the chemical formula between element **C** and sulphate ions  
(v) Name the chemical family in which **H** belong and state one use of the element  
(vi) What is the nature of the oxide of the elements represented by letters **C** and **F**?
30. a) The table below gives information about the major constituents of crude oil. Study it and answer the questions that follow:

Constituent	Boiling point °C
Gases	Below 40
Petrol	40-175
Kerosene	175-250
Diesel	250-350
Lubricating oil	350-400
Bitumen	Above 400

- i) Which of the constituents of crude has molecules with the highest number of carbon atoms? Explain  
ii) Name the process you would use to separate a mixture of petrol and diesel and explain how the separation takes place  
iii) Explain why the constituents of crude oil do not have a sharp boiling point  
iv) Name the gas that is likely to be a constituent of crude oil and write its formula
- b) i) What condition could cause a poisonous gas to be formed when kerosene is burnt. Explain  
ii) Give **one** use of bitumen
31. Study the information in the table below and answer the questions that follow

Number of carbon atoms per molecule	Relative molecular mass of the hydrocarbon
2	28
3	42
4	56

- i) Write the general formula of the hydrocarbons in the table  
ii) Predict the relative atomic mass of the hydrocarbons with 5 carbon atoms  
iii) Determine the relative atomic mass of the hydrocarbon in (ii) above and draw its structural formula (H=1.0, C=12.0)
32. Substance “**M**” with a general formula  $C_2H_y$  burnt in chlorine gas with a red flame producing a cloud of black specks and colourless gas **G**.  
(a) State the collective name for compounds which ‘**M**’ belongs  
(b) With reason, state the identity of the black specks and colour gas “**G**”.
33. 2.63g of a solution of sodium chloride at 20.0°C was reacted with silver nitrate. After filtration, washing and drying, 2.36g of silver chloride was obtained. Determine the solubility of sodium chloride at 20.0°C. (Na=23, Cl= 35.5, Ag = 108)  
(b) Determine the number of moles of carbon (IV) Oxide gas produced when sodium carbonate reacted with dilute sulphuric (VI) acid (Molar gas volume =24dm<sup>3</sup>)
34. Write down all the isomers of but-z-ene and give their IUPAC names
35. (a) A hydrocarbon compound **Z** decolourizes bromine liquid in the presence of light but does not decolourize acidified potassium manganate (VII). Name and draw the structural formula of the eighth member of this homologous series
36. (a) What is meant by **isomerism**?

(b) Draw and name **two** isomers of Butyne

## Nitrogen and its compounds

1. The apparatus below was set-up to show the catalytic oxidation of ammonia. Study the diagram and answer the questions that follow:-

- (i) Write an equation for the reaction that takes place  
(ii) Why is it necessary to have a hot nichrome wire in the gas jar?  
(iii) Write the formula of the complex ion formed when excess ammonia gas is passed through a solution containing  $Zn^{2+}$  ions
2. The diagram below shows the catalytic oxidation of ammonia gas. Use it to answer the questions that follow:-

- (a) What metal could rod **M** be made of?  
(b) State and explain **two** observations made inside the conical flask
3. Ammonia gas is prepared in the laboratory by the action of an alkali on an ammonium salt. A student wanted to prepare a sample of ammonia gas in the laboratory.

- (a) Give **one** alkali that can be used in the above experiment  
 (b) Write an equation for the reaction that takes place in the above experiment

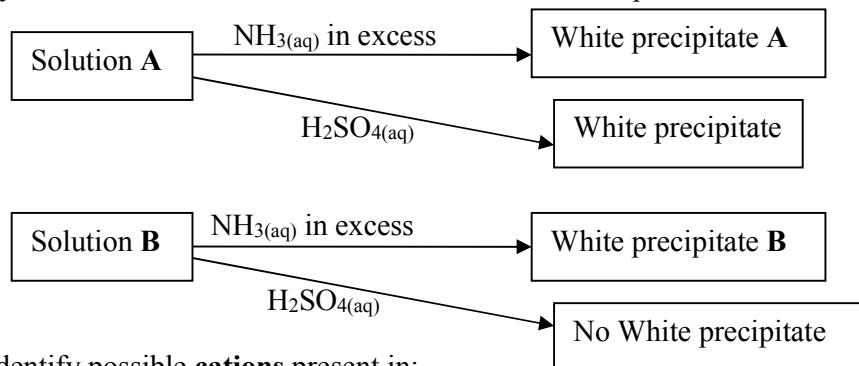

4. (a) Explain the importance of the high percentage of nitrogen in air  
 (b) Why is nitrogen used for storage of semen in artificial insemination?

5. The diagram below is used in preparation of a gas in the laboratory. Answer the questions that follow;

- (a) Name gas X .....  
 (b) State **one** physical property which makes it possible for the gas to be collected as shown\*  
 (c) State **one** commercial use of gas X

6. Study the flow charts below and use them to answer the questions that follow:

- (a) Identify possible **cations** present in:  
 (i) Solution **A**  
 (ii) Solution **B**  
 (b) State and explain the observations made when a sample of dry white precipitate **B** is heated in a test-tube

7. The set-up below is an arrangement showing how metals react with nitrogen (IV) oxide. Study it and answer the questions that follow:-

- (a) Nitrogen (IV) oxide is passed through the combustion tube before copper is heated. Give a reason for this
- (b) State the observations that would be made at the end of the experiment in the combustion tube
- (c) Name gas N .....
8. (a) In haber process hydrogen and nitrogen react in the presence of finely divided iron catalyst. Explain why the catalyst is finely divided
- (b) A mixture of  $N_2$ ,  $H_2$  and  $NH_3$  was bubbled through 0.2M hydrochloric acid solution. The final concentration of the acid was found to be 0.1M. Give explanation
9. In an experiment, a few drops of concentrated nitric acid were added to aqueous iron II sulphate in a test-tube. Excess ammonia solution was then added to the mixture
- (a) State the observations that were made when:-
- Concentrated nitric acid was added to aqueous iron (II) sulphate
  - Excess ammonia was added to the mixture
- (b) Write an ionic equation for the reaction which occurred in a (ii) above
10. The chart below shows a summary for the preparation of nitrogen gas from air

- (a) What is the purpose of the sodium hydroxide?
- (b) Write an equation for the reaction taking place in chamber II
- (c) The nitrogen gas obtained is not pure. Explain
11. Dilute nitric acid is added to excess green solid. Effervescence occurs and a blue solution is formed. When excess ammonia solution is added to a sample of the solution a deep blue solution is formed
- (a) Identify the anion and cation in the green solid:
- (b) Write an ionic equation for the reaction forming deep blue solution
12. The diagram below is a set-up for preparation and collection of a gas. Study it answer the questions that follow:

- Identify gas **X** .....
- Write an equation for the formation of gas **X**
- What precaution should be observed when preparing gas **X** by the above method?
- Describe the suitable drying agent for gas **X**
- How can one confirm that the gas collected is gas **X**?
- State **two** physical properties of gas **X**

(b) The diagram below is a set-up used in preparation of ammonia solution. Study it and answer the questions that follow

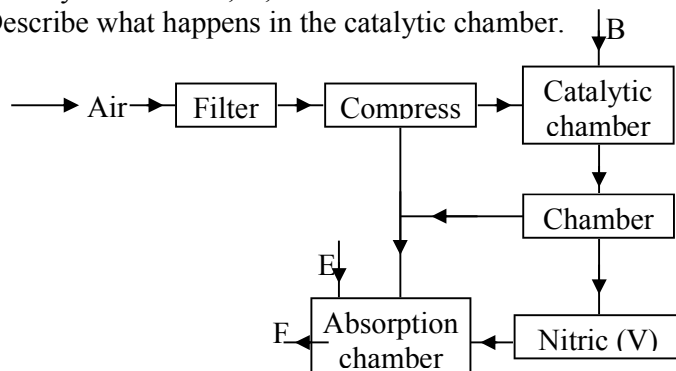

- What is the purpose of the filter funnel in the set-up above?
- What would happen if a delivery tube was used in place of the filter funnel?
- What observation would be made on litmus paper placed into the solution in the beaker at the end of the experiment?

13. The following flow chart shows the industrial manufacture of Nitric (V) acid.

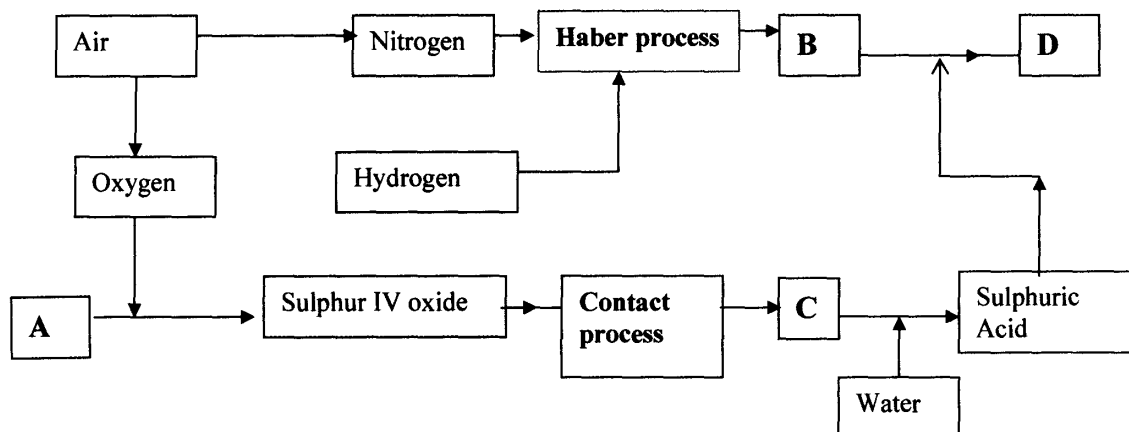

a) Identify substance **B**, **C**, **E** and **F**.

b) Describe what happens in the catalytic chamber.

- State what takes place in chamber **D**.
- 60 – 65% nitric (V) acid is produced in the absorption chamber. Describe how the acid can be concentrated.
- State why nitric (V) acid is stored in dark bottles.
- Copper reacts with nitric (V) acid and not hydrochloric acid. Explain.

14. The flow chart below illustrates two industrial processes, **Haber** process and the **Contact** process:

- Give the name of the process by which air is separated into oxygen and nitrogen
- Apart from oxygen and nitrogen gases produced from process (a)(i) Name **one** other gas produced
- Name the substances represented by the letters **A, B, C** and **E**
- Name the catalysts used in:
  - Haber Process .....
  - Contact Process .....
- Explain the role of the catalysts in both the Haber and the Contact processes
- Write a chemical equation for the formation of compound **B**
- Calculate the percentage by mass of the nitrogen present in compound **D**
- Give **one** major use of compound **E**

15. The diagram below represents a set-up used to obtain nitrogen from air. Study it and answer the questions that follow:-

- Name solid **Q** .....
- What is the purpose of sodium hydroxide
- Write an equation for the reaction which took place in tube "**P**"
- Give the name of **one** impurity in the nitrogen gas obtained
- Give a reason why liquid nitrogen is used for storage of semen for artificial insemination

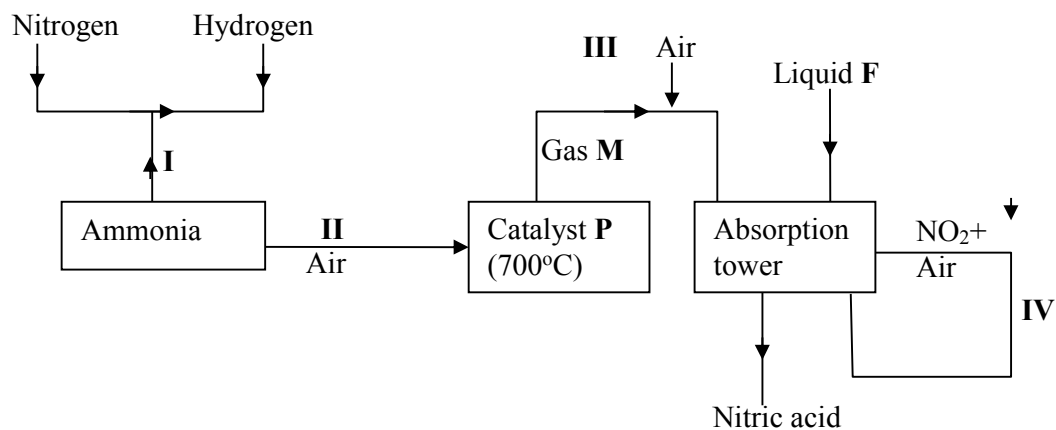

(b) The set-up below was used to prepare nitric acid.

- (i) Give the name of liquid 'R' .....
- (ii) Explain the following:-
- (a) Nitric acid is stored in dark bottles
- (b) The reaction between copper metal with 50% nitric acid in an open tube gives brown fumes

16. Study the flow chart below and answer the questions which follow:

- (i) Give **one** source of the following raw materials
- (a) Nitrogen gas .....
- (b) Hydrogen gas .....
- (ii) State **three** conditions required in process **I**
- (iii) Name: catalyst **P**.....
- Gas **M**.....
- (iv) Write chemical equations for;
- (a) Formation of gas **M**
- (b) The reaction in the absorption tower
- (v) Give **two** reasons why step **IV** is necessary
- (vi) Describe how you would test if a given liquid is a nitrate
- (vii) Give **three** uses of nitric acid
17. The diagram below shows the apparatus for the laboratory preparation of one of the oxides of Nitrogen

- a) (i) Name the gas being produced  
(ii) Write the equation for the thermal decomposition of ammonium Nitrate  
(iii) The gas is being collected over hot water. Explain  
(iv) State and explain the observations made when burning sulphur is lowered into a gas jar containing the gas
- (b) (i) Name the catalyst used during catalytic oxidation of ammonia  
(ii) Nitrogen (IV) oxide is the final product during catalytic oxidation of ammonia. Write a chemical equation for its formation  
(iii) State **two** physical differences between Nitrogen (I) oxide and Nitrogen (IV) Oxide
- (c) Nitric acid is prepared in the laboratory by action of concentrated sulphuric (VI) acid on a suitable Nitrate and distilling off the Nitric acid, in all glass apparatus.  
(i) Why must the apparatus be made of glass?  
(ii) Hot concentrated Nitric acid reacts with sulphur in the equation below:-  

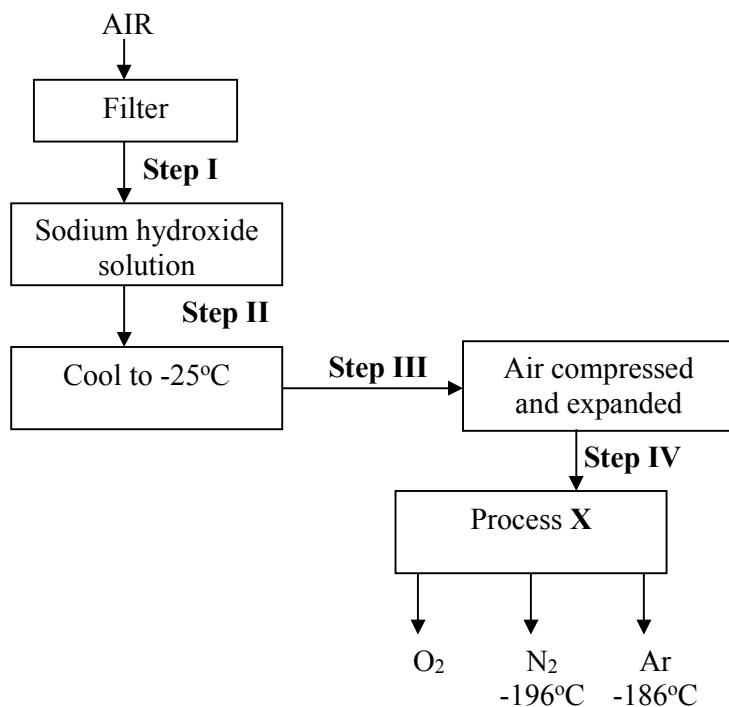

$$S_{(s)} + 6HNO_{3(aq)} \longrightarrow H_2SO_{3(aq)} + 6NO_{2(g)} + 2H_2O_{(l)}$$
(I) Identify the species :-  
Oxidised ..... Reduced .....
- (II) Pure nitric acid is colourless but the product during its preparation is usually pale yellow. Explain

18. a) Describe the process by which oxygen can be obtained from air on large scale  
b) The flow chart below shows the industrial manufacture of nitric (V) acid

- i) Identify substances X and Y  
ii) Write an equation for the reaction taking place in the absorption tower  
iii) The concentration of the acid obtained is about 60%. How can this concentration be increased to about 65%?  
iv) A factory uses nitric (V) acid and ammonia as the only reactants for the production of a fertilizer. If a mass of 9600kg of fertilizer was produced, calculate the mass of ammonia gas needed (N = 14, H = 1, O = 16)

1.9

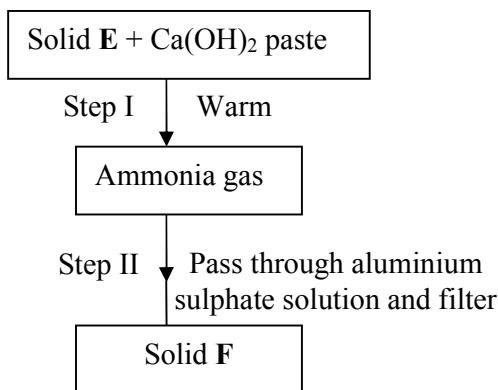

- Name another substance which can be used instead of sodium hydroxide
  - What is the function of filters?
  - Identify the substance removed at **step III**
  - At what temperature does liquid oxygen distil?
  - Identify **process X**
  - Describe how **process X** occurs
  - I. State **one** industrial use of Nitrogen  
 (II) Air is a mixture but not a compound. Give **two** reasons
20. Using chemical equations show the bleaching actions of chlorine and sulphur(IV)oxide
21. The diagram below represents an incomplete set-up for preparation of a dry sample of gas R

- Complete the set-up to show how a dry sample of gas **R** is collected
  - Write a chemical equation for the reaction that produces gas **R**
22. The diagram below was used to investigate the reaction between nitrogen(I)oxide and copper turnings. Study it and answer the questions that follow:

- a) What has been omitted in the set-up? (show it on the diagram)  
 b) Write a chemical equation for the reaction that took place in the combustion tube  
 c) State **one** use of gas P
23. When sulphur powder is heated to over 400°C the following changes are observed:-  
 At 113°C it melts into light brown liquid. The liquid then darkens to become reddish-brown and very viscous at 160°C. Above 160°C the liquid becomes almost black. At the boiling point the liquid becomes mobile. Explain these observations
24. Concentrated sodium chloride (Brine) was electrolysed using platinum electrodes. What would be the difference in terms of products at each electrode if dilute sodium chloride solution was used in place of brine. Explain
25. (i) Nitrogen (I) Oxide supports, combustion of burning charcoal. Write an equation to show this reaction  
 (ii) Ammonium nitrate can be heated to give off nitrogen (I) Oxide. However, a mixture of  $\text{NH}_4\text{Cl}$  and  $\text{NaNO}_3$  is preferred. Explain  
 (iii) Ammonia turns wet red litmus paper blue. Which ion is responsible for this reaction
26. Study the scheme below and answer the questions that follow:

- (a) Name solids **E** and **F**  
 (b) Write down a balanced equation for the reactions that lead to formation of solid **F**
27. When a few drops of aqueous ammonia were added to a colourless solution **X**, a white precipitate was formed. On addition of more aqueous ammonia, the white precipitate dissolved to a colourless solution **Q**
- (a) Name the white precipitate formed  
 (b) Write formula of the complex ion present in the colourless solution **Q**

- (c) Write an ionic equation for the formation of the white precipitate
28. The first step in the industrial manufacture of nitric acid is the catalytic oxidation of ammonia gas.
- What is the name of the catalyst used?
  - Write the equation for the catalytic oxidation of ammonia gas.
  - Nitric acid is used to make ammonium nitrate. State **one** use of ammonium nitrate.
29. Explain what is observed when ammonia gas is bubbled into Copper (II) sulphate solution till in excess.
30. (a) State the conditions under which nitrogen react with hydrogen to form ammonia during Haber process
- (b) When dry ammonia gas is passed over hot copper (II) Oxide, a shiny brown residue and a colourless droplets are formed. Explain these **two** observations
31. Study the flow chart below and answer the questions that follow

- State the observation made when ammonia is passed over heated Copper (II) Oxide
- Identify:-
  - Gas A .....
  - Liquid B .....

## Sulphur and its compounds

1. Sulphur is extracted from underground deposits by a process in which three concentric pipes are sunk down to the deposits as shown below

- Name the process represented above
  - What is passed down through pipe J?
  - Name the **two** allotropes of sulphur
2. Commercial sulphuric acid has a density of  $1.8\text{gcm}^{-3}$ .
- Calculate the molarity of this acid
  - Determine the volume of commercial acid in (a) above that can be used to prepare  $500\text{cm}^3$  of  $0.2\text{M H}_2\text{SO}_4$  solution
3. Oleum ( $\text{H}_2\text{S}_2\text{O}_7$ ) is an intermediate product in the industrial manufacture of sulphuric acid
- How is oleum converted into sulphuric (IV) acid?
  - Give **one** use of sulphuric acid
4. Differentiate between the bleaching action of chloride and sulphur (IV) oxide gas.
5. (i) Is concentrated sulphuric acid a weak acid or a strong acid?

- (ii) Explain your answer in (i) above.
6. In the manufacture of sulphuric acid, sulphur (IV) oxide is oxidized to sulphur (VI) oxide.
- Name the catalyst used
  - Write the equation representing the conversion of sulphur (IV) oxide to sulphur(VI)oxide
  - Explain using equations how dilute sulphuric acid is finally obtained from sulphur (VI) oxide
7. When a mixture of concentrated sulphuric acid and copper turnings is strongly heated, a colourless gas and solid mixture of white and black solids are formed. When this solid mixture is treated with distilled water, and filtered, a blue solution and black solid residue are collected. Explain the observations on the solid mixture formed in the above experiment
8. The set-up below is used to prepare dry sulphur (IV) Oxide in the laboratory. Answer questions that follow:

- Identify the mistake in the set-up
  - Write an equation for the reaction in the set-up
  - State how the polluting effects of the gas on the environment can be controlled
9. (a) State the observation made at the end of the experiment when a mixture of iron powder and sulphur are heated in a test-tube
- Write an equation for the reaction between the product in (a) above and dilute hydrochloric acid
  - When a mixture of iron powder and sulphur is heated it glows more brightly than that of iron fillings and sulphur. Explain this observation
10. (a) Name **one** reagent that can be reacted with dilute hydrochloric acid to produce Sulphur (IV) oxide
- What would be observed if moist blue litmus paper is dropped into a gas jar of sulphur (IV) oxide? Explain your answer with an equation
11. (a) State **two** properties that vulcanized rubber posses as a result of vulcanization
- During Frasch process molten sulphur flows out through the middle pipe but not through the outer pipe. Give a reason
12. (a) Give **two** reasons why during the manufacture of sulphuric (VI) acid, sulphur (VI) Oxide, is dissolved in concentrated Sulphuric (VI ) acid instead of dissolving in water
- State **one** use of sulphuric (VI) acid
13. The diagram below may be used to react hydrogen sulphide and sulphur (IV) oxide. Study it and answer the questions that follow:-

- (a) What is observed in the jars  
 (b) Write an equation for the reaction  
 (c) What is the role of sulphur (IV) oxide in the reaction
14. The diagram below shows the extraction of sulphur by Frasch process.

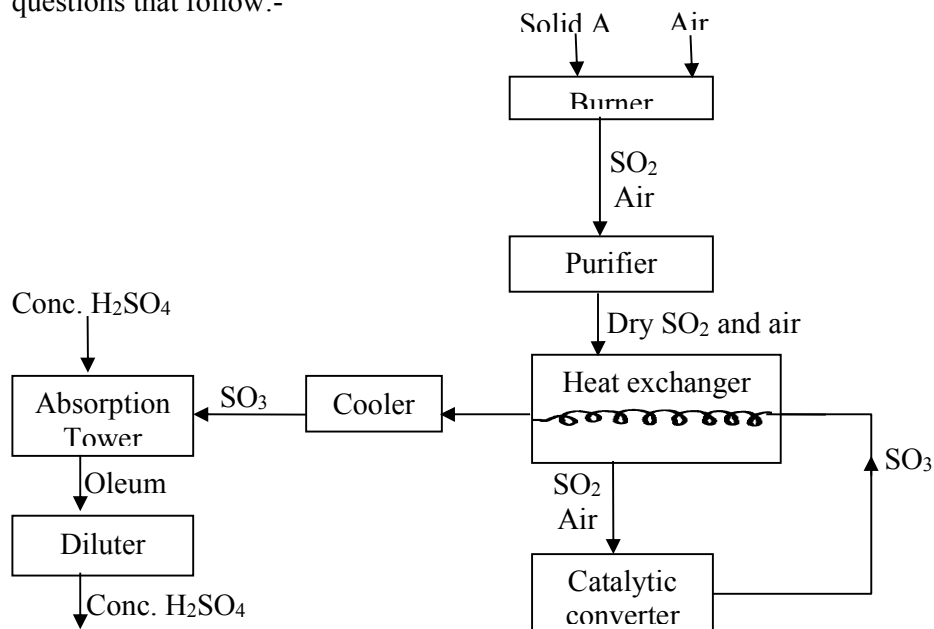

- a) State the uses of pipes A, B and C.  
 b) Give **two** crystalline allotropes of sulphur.  
 c) Write an equation for the combustion of sulphur.  
 d) Name the product formed when a mixture of sulphur and Iron is heated.  
 e) Give **two** uses of sulphur.  
 f)  $6.0 \text{ dm}^3$  of sulphur (IV) oxide were oxidized by oxygen to sulphur (VI) oxide.  
 (i) Write an equation for the reaction.  
 (ii) Calculate the number of moles of sulphur (IV) oxide and oxygen used at R.T.P.  
 (iii) Determine the volume of oxygen used.  
 (Molar volume of a gas at R.T.P. is  $24.0 \text{ dm}^3$ )
15. The diagrams below represent two allotropes of Sulphur. Study them and answer the questions which follow:-

- (i) Name the **two** allotropes labelled **X** and **Y**  
 (ii) (I) Explain why a piece of burning magnesium continues to burn in a gas jar of Sulphur (IV) Oxide  
 (II) Explain how one of the products formed in (I) above can be obtained from the mixture
16. (a) (i) Name the **two** crystalline forms of sulphur  
 (ii) Briefly explain how plastic sulphur is formed

(b) The scheme below represents the steps followed in the contact process. Study it and answer the questions that follow:-

- Name **two** possible identities of solid A
- Name **one** impurities removed by the purifier
- Why is it necessary to remove impurities?
- Write down the equation of the reaction taking place in the converter
- (I) Name the **two** catalysts that can be used in the converter  
(II) What is the function of heat exchanger?
- Sulphuric (VI) Oxide is not dissolved directly into water? Explain
- (I) Name the main pollutant in the contact process.  
(II) How can the pollution in (g) (I) above be controlled?
- Give **one** use of sulphuric (VI) acid

7. The set-up below was used to prepare dry sample of hydrogen sulphide gas

- (i) Complete the diagram to show how the gas was collected  
(ii) Identify the following:-  
I. Solid H .....  
II. Solid I .....
- Write an equation for the reaction that occurred in the flask between solid H and dilute

Hydrochloric acid

(b) When hydrogen sulphide gas was passed through a solution of Iron (III) chloride, the following observations were made:-

- (i) the colour of the solution changed from reddish-brown to green and
- (ii) a yellow solid was deposited

Explain the observation

(c) In the manufacture of Sulphuric (VI) acid by contact process sulphur (IV) oxide is made to react with air to form sulphur (VI) oxide as shown:-

- (i) Name the catalyst in this reaction
- (ii) State and explain the effect of the following changes on the yield of sulphur (VI) oxide
  - I. Increasing the pressure
  - II. Using a catalyst
- (iii) Explain why sulphur (VI) oxide gas is absorbed in concentrated sulphur (VI) acid before dilution

18. The flow chart below shows a sequence of chemical reactions starting with sulphur. Study it and answer the questions that follow:-

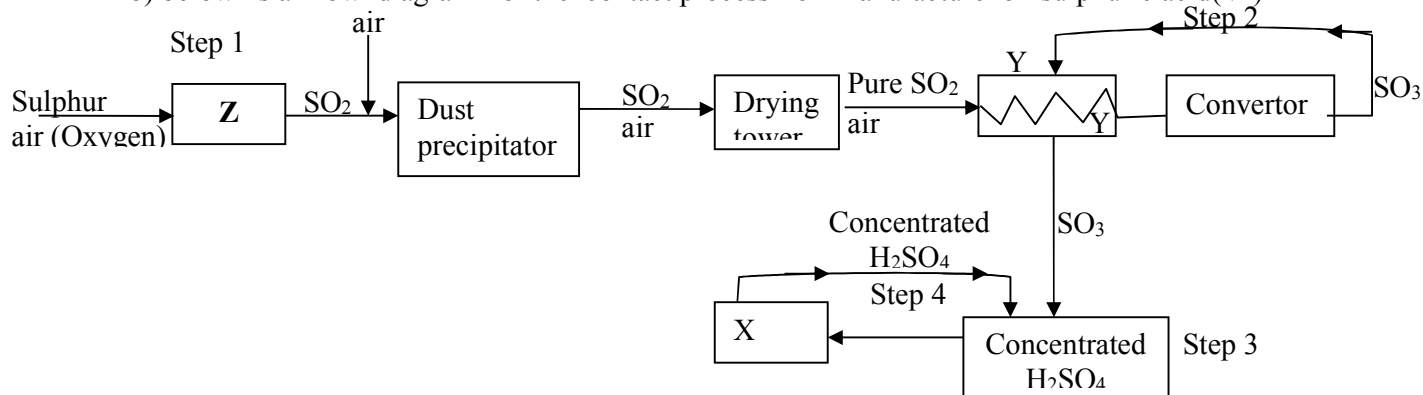

- (a) (i) State **one** observation made when the reaction in step 1 was in progress
- (ii) Explain why dilute hydrochloric acid cannot be used in **step 1**
- (iii) Write the equation for the reaction that took place in **step 1**
- (iv) Name the reactions that took place in **step 4**
- (v) Name **solution A** .....
- (vi) State and explain the harmful effects on the environment of the **gas C** produced in **step 1**

- 19 a) Sulphur occurs naturally in two different forms called allotropes;
- i) What are allotropes
  - ii) the two allotropes of sulphur are stable at different temperatures, as shown in the equations below.

Give the name to the temperature 95.5°C

b) below is a flow diagram for the contact process for manufacture of sulphuric acid(VI)

- i) Give the name of the chambers labelled  
(1½mks)
- ii) State the **three** conditions in the converter  
(1½mks)
- iii) Explain why the gases are passed through:  
I. The dust precipitator and drying power  
II. The chamber labeled Y
- (iv) Write the balanced equations for the reactions in :

Step 2

Step 3

Step 4

20. Study the figure below:

State and explain the observations made in:

Test tube L .....

Test tube K .....

21. The set-up below was used to prepare and collect hydrogen sulphide gas. Study it and answer the questions that follow:-

- (a) Name solid V
- (b) Give a reason why warm water is used in the set-up

22. Sulphur (IV) oxide and nitrogen (II) oxide are some of the gases released from internal combustion engines. State how these gases affect the environment

23. When hydrogen sulphide gas was bubbled into an aqueous solution of Iron (III) chloride, a yellow precipitate was formed.
- State another observation that was made.
  - Write an equation for the reaction that took place.
  - What type of reaction was undergone by hydrogen sulphide in this reaction?
24. In an attempt to prepare Sulphur (IV) Oxide gas, dilute Sulphuric acid was reacted with barium carbonate. The yield of Sulphur dioxide was found to be negligible. Explain

## Chlorine and its compounds

- State **one** observation made in this experiment
  - Identify the substances formed in the above reaction
- Hydrogen chloride gas was passed into water as shown below:

- When a blue litmus paper was dropped into the resulting solution, it turned red. Give a reason for this observation
  - What is the function of the funnel?
3. A group of compounds called chlorofluoro-carbons have a wide range of uses but they also have harmful effects on the environment. State one:-
- Use of chlorofluoro carbons
  - Harmful effect of chlorofluoro carbons on the environment.
4. a) Water from a town in Kenya is suspected to contain chloride ions but not sulphate ions. Describe how the presence of the chloride ions in the water can be shown.
5. In an experiment, chlorine was passed into moist hydrogen sulphide in a boiling tube as shown below:

- What observation was made in the boiling tube?
- Write an equation of the reaction that took place in the boiling tube

- (c) What precaution should be taken in carrying out this experiment? Give a reason
6. Heated iron can react with both chlorine gas and hydrogen chloride gas
- Write equations for the reactions
  - Chlorine gas has no effect on dry blue litmus paper. Explain
7. The following diagram represents a set-up that can be used in the laboratory to prepare and collect a sample of chlorine gas:

- No gas bubbles were produced in the above experiment. Explain the observation
  - Complete the following equation  

$$\text{Cl}_2\text{O}_{(g)} + \text{H}_2\text{O}_{(l)} \longrightarrow$$
  - Describe the bleaching property of chlorine water
8. Study the flow diagram below and answer the questions that follow:

- Name gas **L**
  - Write a balanced equation for the reaction between hydrochloric acid and manganese (IV) oxide
  - Explain what happens to coloured petals when dropped into a solution of **M**
9. Carbon (IV) Oxide, methane, nitrogen (I) Oxide and trichloromethane are green house gases
- State **one** effect of an increased level of these gases to the environment
  - Give **one** source from which each of the following gases is released to the environment;
    - Nitrogen (I) Oxide
    - Tricholomethane
10. (a) Two reagents that can be used to prepare chlorine gas are manganese (IV) oxide and concentrated hydrochloric acid.
- Write an equation for the reaction
  - Give the formula of another reagent that can be reacted with concentrated hydrochloric acid to produce chlorine gas
  - Describe how the chlorine gas could be dried and collected in the laboratory

- (b) In an experiment, dry chlorine gas was reacted with aluminium as shown in the diagram below

- Name substance **A**
- Write an equation for the reaction that took place in the combustion tube

- (iii) State the function of the calcium chloride in the set-up above
11. The figure below was set by a student to investigate the reaction between chlorine gas and hydrogen gas:

- (a) Write an equation for the reaction that took place in the flask
- (b) What observation was made in the flask?
- (c) What precaution should be taken in carrying out the experiment?
12. In an attempt to prepare a gas, Sabulei added concentrated hydrochloric acid to Potassium manganate. The products were then passed through two wash bottles containing water and concentrated sulphuric acid
- (a) Name the gas prepared.....
- (b) Name the purpose of wash bottle:
- (i) Containing water?
- (ii) Containing concentrated sulphuric acid?
13. Study the scheme below and answer the questions that follow.

- (a) Write the formula of the cation present in the yellow solution F
- (b) What property of chlorine is shown in Step II?
- (c) Write an equation for the reaction in step III
14. (i) Name **one** drying agent for hydrogen Chloride
- (ii) State and explain the observation that would be made when hydrogen Chloride gas is bubbled into a solution of Silver nitrate

## Acids, bases and salts

1. Study the reaction below and answer the questions that follow
- $$\text{NH}_3 (\text{g}) + \text{H}_2\text{O} (\text{l}) \rightleftharpoons \text{NH}_4^+ (\text{aq}) + \text{OH}^- (\text{aq})$$
- (a) Define the term acid
- (b) Identify an acid in the above reaction
- (c) Explain your answers in (b) above
2. A student mixed equal volumes of Ethanol and butanoic acid. He added a few drops of concentrated Sulphuric (VI) acid and warmed the mixture
- (i) Name and write the formula of the main products

Name.....

Formula.....

(ii) Which homologous series does the product named in (i) above belong?

3. A sample of water from a village in Trans Mara East District was divided into equal portions and each mixed with equal volume of soap solution. The observations made are tabulated below:

Sample of water	Treatment before adding soap	Observations made on shaking with soap
I	Boiled	Lather form immediately
II	No treatment	Slight lather form slowly
III	Treatment with washing soda	Lather formed immediately

- (a) What type of hardness is present in water from the village. Explain  
(b) State **one** advantage of hard water
4. The solubility of Iron (II) Sulphate crystals at 22°C is 15.65g per 100g of water. Calculate the mass of iron(II) sulphate crystals in 45g of saturated solution at the same temperature
5. Hardness of water may be removed by either boiling or addition of chemicals:  
(a) Write an equation to show how boiling removes hardness of water  
(b) Name **two** chemicals that are used to remove hardness of water
6. State **one** advantage of drinking hard water rather than soft water.
7. Given this reaction;  
$$\text{RNH}_2 + \text{H}_2\text{O} \rightleftharpoons \text{RNH}_3^+ + \text{OH}^-$$
  
a) Identify the acid in the forward reaction. Explain  
b) Dilute nitric acid can react with a solution of sodium carbonate. Write an ionic equation for the reaction
8. Magnesium hydrogen carbonate is responsible for the temporary hardness of water. This type of hardness can be removed by addition of ammonia solution  
(a) Describe how temporarily hard water is formed  
b) Write an equation to show the softening of temporarily hard water by the addition of aqueous ammonia solution
9. When 2M potassium hydroxide solution was added to solution **R**, a white precipitate **T** was formed which dissolved in excess potassium hydroxide solution to form solution **L**. solution **R** forms a white precipitate with sodium chloride solution:  
(a) Identify the cation in solution **R** .....  
(b) Name precipitate **T** .....  
(c) Write the molecular formula of the compound in solution **L**
10. Below is a table showing the solubilities of salts **Q** and **R** at different temperatures.
- | Temperature °C                            |               | 0    | 10   | 20   | 30   | 40   | 50   |
|---|---------------|------|------|------|------|------|------|
| Solubilities in grammes per 100g of water | Salt <b>Q</b> | 3.0  | 5.0  | 7.4  | 10.0 | 14.0 | 19.0 |
|   | Salt <b>R</b> | 15.0 | 17.0 | 20.7 | 25.7 | 28.7 | 33.0 |
- (a) Define the term "Solubility of salt"  
(b) If both salts **Q** and **R** are present in 100cm<sup>3</sup> of saturated solution at 50°C, what will be the total mass of crystals formed if the solution was cooled to 20°C?
11. The following results were obtained during an experiment to determine the solubility of potassium chlorate(V) in water at 30°C.  
Mass of evaporating dish = 15.86g

Mass of evaporating dish + saturated solution at 30°C = 26.8g  
 Mass of evaporation dish + solid potassium chlorate (v) after evaporation to dryness = 16.86g  
 Calculate the mass of the saturated solution containing 60.0g of water at 30°C

12. (a) What is meant by the term solubility of salts?  
 (b) Calculate the solubility of salt given that 15g of the salt can saturate 25cm<sup>3</sup> of water  
 (c) The table below gives the solubility of salt X in grams per 100g of water at different temperatures

Temp °C	10	20	30	40	50	60	70	80	90	100
Solubility (g/100g) water	5.0	7.5	10.5	14.0	18.5	24.0	30.0	38.0	46.0	50.1

- (i) Plot a solubility curve for salt X (solubility in g /100g water Y- axis) (temp °C (X –axis)  
 (ii) What is meant by the points plotted in (i) above?  
 (iii) From your graph determine the solubility of salt X at the following temperatures  
 I 44°C .....  
 II 62°C .....  
 (iv) What mass of crystals of the salt will be formed if the solution was cooled from 62°C to 44°C  
 (v) Name **two** areas where knowledge of solubility curves is applied
13. You are given a mixture of Lead (II) Chloride, Iodine, ammonium chloride and sodium chloride. Explain how you would separate all the four solids using methylbenzene, a source of heat and water
14. (a) The table below shows the solubility of potassium chlorate at different temperatures

Temperature (°C )	10°	20°	30°	40°	50°	60°	70°
Solubility g/100g water	27	30	36	55	80	110	140

- (i) Plot a graph of solubilities of potassium chlorate against temperature  
 (ii) Using your graph:  
 (I) Determine the solubility of potassium chlorate at 47°C  
 (II) Determine the concentration in moles per litre of potassium chlorate at 47°C  
 (K= 39, Cl = 35.5, O= 16) density of solution = 1g/cm<sup>3</sup>  
 (III) Determine the mass of potassium chlorate that would crystallize if the solution is cooled from 62°C to 45°C
- (b) In an experiment to determine the solubility of sodium hydroxide, 25cm<sup>3</sup> of a saturated solution of sodium hydroxide weighing 28g was diluted in a volumetric flask and the volume made to 250cm<sup>3</sup> mark. 20cm<sup>3</sup> of this reacted completely with 25cm<sup>3</sup> of 0.2M hydrochloric acid according to the equation.
- $$\text{NaOH}_{(\text{aq})} + \text{HCl}_{(\text{aq})} \longrightarrow \text{NaCl}_{(\text{aq})} + \text{H}_2\text{O}_{(\text{l})}$$

**Calculate:**

- (i) The number of moles of hydrochloric acid used  
 (ii) The number of moles of sodium hydroxide in 20cm<sup>3</sup>  
 (iii) The moles of sodium hydroxide in 250cm<sup>3</sup> of solution  
 (iv) The mass in grams of sodium hydroxide in 250cm<sup>3</sup> of solution  
 (v) The solubility of sodium hydroxide in g/100g water
15. a) Define the **term solubility of a substance**  
 b) The table below shows the solubilities of two salts L and M at different temperatures.

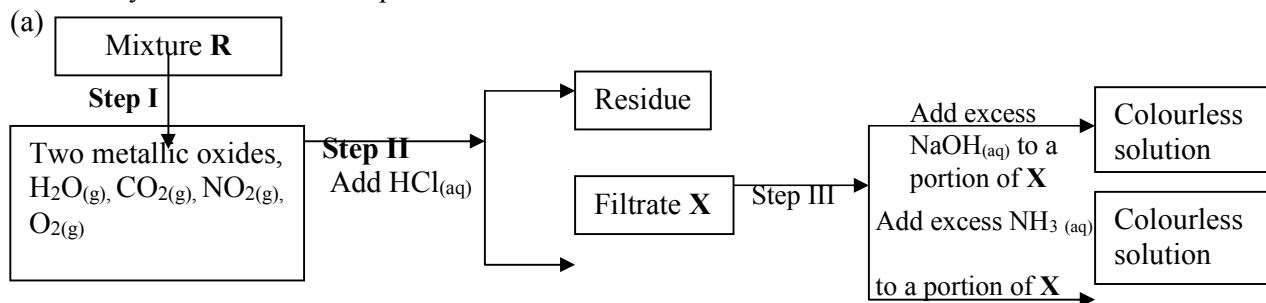

Temperature(°C)		10	20	30	40	50
Solubility in g/100g of water.	L	11.0	14.0	20.1	28.0	36.0
	M	15.0	17.0	19.0	21.2	25.0

- i) Name the method that can be used to separate the two salts
- ii) Plot on the same axes a graph of solubilities of **L** and **M** against temperature
- iii) From the graph determine:-
  - The temperature at which solubilities are equal
  - The solubility at the temperature mentioned above
- iv) If the relative formula mass of **M** is 132, determine the concentration of **M** in moles per litre in (iii) II above

16. The graph below shows the changes in conductivity when 50cm<sup>3</sup> of 0.1M Nitric (V) acid is titrated with potassium hydroxide (curve I) and when 50cm<sup>3</sup> of 0.1M methanoic acid is

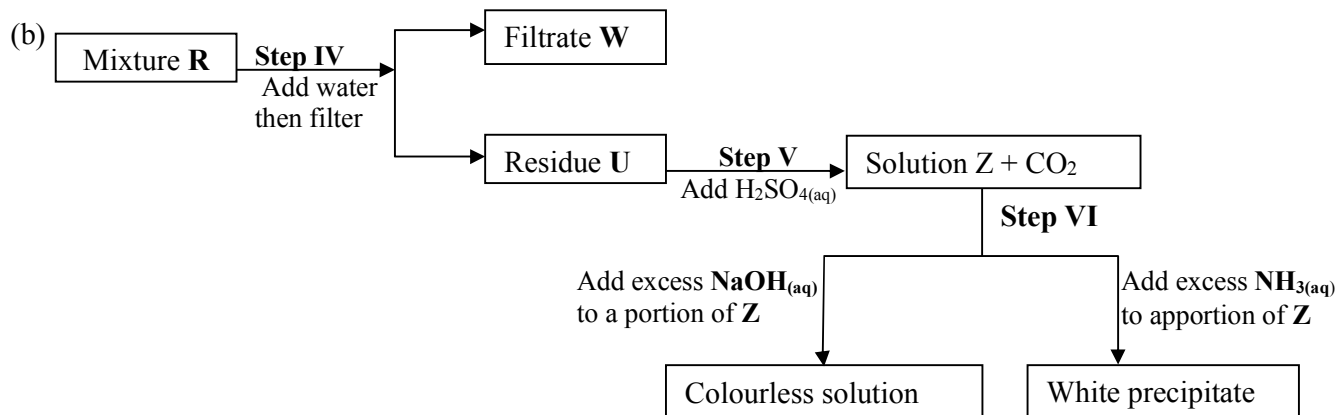

- (a) (i) Explain the changes in conductivity in the regions:
    - AB**.....
    - BC**.....
  - (ii) Using curve (I), explain why the conductivity does not have a value of zero at end-point
  - (iii) Calculate the concentration of KOH with reference to curve II
  - (iv) Explain why the two curves shows different trends in conductivity
  - (b) 50cm<sup>3</sup> of 0.1M methanoic acid was reacted with 20cm<sup>3</sup> of a solution of sodium carbonate of unknown concentration. Work out the concentration of the carbonate
17. The flow charts below show an analysis of a mixture **R** that contains two salts. Study the analysis and answer the questions that follow:-

- (i) State:-
  - (I) The condition in **step I**
  - (II) The process in **step II**

- (ii) A small portion of mixture **R** is added to dilute nitric (V) acid in a test-tube. What would be observed?
- (iii) Write an equation for the reaction between the cation in filtrate **X** and sodium hydroxide solution
- (iv) Explain how water vapour in **step I** could be identified

- (i) State and explain the conclusion that can be made from **step IV** only
- (ii) Name the anion present in residue **U**. Explain
- (iii) From the flow chart in (a) and (b);
- (I) Write the formulae of cations present in mixture **R**
18. a) Define the term solubility of a substance.
- b) The table below shows the solubilities of two salts **L** and **M** at different temperatures.

Temperature (°C)	Type of salt	10	20	30	40	50
Solubility g/100g of water	<b>L</b>	11.0	14.0	20.1	28.0	36.0
	<b>M</b>	15.0	17.0	19.0	21.2	25.0

- (i) Name the method that can be used to separate the two salts.
- (ii) Plot on the same axes a graph of solubilities of **L** and **M** against temperature
- (iii) From the graph, determine:
- I. The temperatures at which solubilities are equal
- II. The solubility at the temperature mentioned above
- (iv) If the relative formula mass of **M** is 132, determine the concentration of **M** in moles per litre in (iii) II above.
- v) A solution contains 38g of **L** and 22g of **M** at 50°C. Calculate the total mass of crystals obtained in cooling this solution to 30°C.
19. a) Define:
- (i) A saturated solution.
- (ii) Solubility of a solute.
- b) In an experiment to determine solubility of sodium chloride, 10.0 cm<sup>3</sup> of a saturated solution of sodium chloride weighing 10.70g were placed in a volumetric flask and diluted to a total of 500 cm<sup>3</sup>. 25.0 cm<sup>3</sup> of the diluted solution of sodium chloride reacted completely with 24.0 cm<sup>3</sup> of 0.1M silver nitrate solution. The equation for the reaction is
- $$\text{AgNO}_3(\text{aq}) + \text{NaCl}(\text{aq}) \longrightarrow \text{AgCl}(\text{s}) + \text{NaNO}_3(\text{aq})$$
- I. Calculate;
- (i) Moles of silver nitrate in 24.0 cm<sup>3</sup> of solution.
- (ii) Moles of NaCl in 25.0 cm<sup>3</sup> of solution.
- (iii) Moles of NaCl in 500 cm<sup>3</sup> of solution.

- (iv) Mass of NaCl in 10.0 cm<sup>3</sup> of saturated sodium chloride (Na = 23, Cl = 35.5)  
 (v) Mass of water in 10.0cm<sup>3</sup> of saturated solution.  
 (vi) The solubility of NaCl in g/100g of waters.

20. Describe how you would prepare a dry sample of crystals of potassium sulphate starting with 100cm<sup>3</sup> of 1M sulphuric (VI) acid.

21. The table shows solubility of potassium chlorate V

Temp (°C)	45°C	80°
Solubility	39	63

- (a) Calculate the mass of solute and solvent in 90g of the saturated solution of the salt at 45°C  
 (b) A solution of the salt in 100g water contains 63g at 95°C. At what temperature will the solution start forming crystals when cooled
22. Two samples of hard water **C** and **D** were boiled. When tested with drops of soap, sample **D** formed lather easily while **C** did not:-  
 (a) Name the possible salt that caused hardness in sample **D**  
 (b) Explain how distillation can remove hardness in sample **C**  
 (c) Give **one** advantage of hard water
23. A student attempted to prepare a gas using the set-up below. She could not collect any gas

- (a) Give **two** reasons why no gas was collected  
 (b) Which gas did the student intend to prepare?
24. Water from a town in Kenya is suspected to contain chloride ions but not sulphate ions.  
 (a) Describe how the presence of chloride ions in the water can be shown  
 (b) State **one** advantage of drinking hard water rather than soft water
25. Study the following tests and observation and answer the questions that follow:-

	TEST	OBSERVATION
<b>I</b>	- Add few drops of aqueous ammonia to copper (II) nitrate solution	- Light blue precipitate is formed
<b>II</b>	- Add excess of ammonia to copper (II) nitrate	- Deep blue solution
<b>III</b>	- Add cold dilute hydrochloric acid to substance E1 and warm gently	- Gas evolved, smells of rotten eggs and blackens lead acetate paper

**Identify:-**

(a) Substance responsible for:

I. Light blue precipitate.....

II. Deep blue solution .....

- (b) Gas evolved in **test III** above .....
26. (i) What is meant by the term solubility of salts?  
(ii) Calculate the solubility of a salt given that 15g of the salt can saturate 25cm<sup>3</sup> of water.
27. (a) Draw a well labeled diagram to show how to prepare an aqueous solution of hydrogen chloride gas  
(b) Name **one** other gas whose aqueous solution can be prepared in the same way
28. In an experiment to determine the solubility of solid Y in water at 30°C the following results were obtained; \*MAT  
Mass of empty evaporating dish = 26.2g  
Mass of evaporating dish + saturated solution = 42.4g  
Mass of evaporating dish + dry solid Y = 30.4g  
(a) Use the data to calculate the solubility of solid Y at 30°C  
(b) State **one** application of solubility curves and values

29. Study the table below showing the solubility of substance **K** at various temperatures

Temperature (°C )	Solubility (g/100g water)
0	30
30	24
70	19
100	14

- (a) What would happen if a sample of a saturated solution of the substance at 30°C is heated to 70°C. Explain.  
(b) What is the most likely state of substance **K**.....
30. In the equilibrium given below:-  

$$\text{Fe}^{3+}_{(\text{aq})} + \text{SCN}_{(\text{aq})} \rightleftharpoons [\text{Fe}(\text{SCN})]^{2+}_{(\text{aq})}$$
Brown Red
- What would be observed when Iron (III) Chloride is added to the equilibrium mixture. Explain
31. Sodium Carbonate Decahydrate crystals were left exposed on a watch glass for two days.  
a) State the observations made on the crystals after two days.  
b) Name the property of salts investigated in the above experiment

32. The label on a bottle of mineral; water had the information below.

Ions present	Concentration (g/litre)
Ca <sup>2+</sup>	0.10
Mg <sup>2+</sup>	0.20
Na <sup>+</sup>	0.01
K <sup>+</sup>	0.01
SO <sub>4</sub>	0.14
HCO <sub>3</sub> <sub>2</sub>	0.26

- (a) Name the compound that causes temporary hardness in the mineral water.  
(b) Using an equation, describe how the water can be made soft by adding sodium carbonate solution.  
(c) Give **one** advantage of drinking mineral water such as the one above
33. A solution of hydrogen chloride gas in methylbenzene has no effect on calcium carbonate. A solution of hydrogen chloride in water reacts with calcium carbonate to produce a gas. Explain
34. (i) Is concentrated sulphuric acid a weak acid or a strong acid?  
(ii) Explain your answer in (i) above.
35. When water reacts with potassium metal the hydrogen produced ignites explosively on the surface of water.  
(i) What causes this ignition?  
(ii) Write an equation to show how this ignition occurs

36. In an experiment, soap solution was added to three samples of water. The results below show the volume of soap solution required to lather with 500cm<sup>3</sup> of each water sample before and after boiling

	Sample 1	Sample 2	Sample 3
Volume of soap used before water boiled	26.0	14.0	4.0
Volume of soap after water boiled	26.0	4.0	4.0

- (i) Which water samples are likely to be soft?  
 (ii) Explain the change in volume of soap solution used in sample 2
37. How does the  $\sqrt{1}$  pH value of 0.25M KOH<sub>(aq)</sub> compare with that of 0.25M ammonia solution

## Energy changes in chemical and physical processes

1. 6g of Potassium nitrate solid was added to 120cm<sup>3</sup> of water in a plastic beaker. The mixture was stirred gently and the following results were obtained.  
 Initial temperature = 21.5°C  
 Final temperature = 17.0 °C
- (a) Calculate the enthalpy change for the reaction  
 (Density = 1g/cm<sup>3</sup>, C = 4.2jg<sup>-1</sup>K<sup>-1</sup>)
- (b) Calculate the molar enthalpy change for the dissolution of potassium nitrate  
 (K=39, N= 14, O =16)
2. (a) The heat of combustion of ethanol, C<sub>2</sub>H<sub>5</sub>OH is 1370KJ/mole.  
 (i) What is meant by heat of combustion?  
 (ii) Calculate the heating value of ethanol  
 (H = 1.0, C = 12.0, O = 16.0)
3. Use the information below to answer the questions that follow:-  
 $\text{Ca}_{(s)} + \frac{1}{2} \text{O}_{2(g)} \longrightarrow \text{CaO}_{(s)} \quad \Delta H = -635\text{KJ/mol}$   
 $\text{C}_{(s)} + \text{O}_{2(g)} \longrightarrow \text{CO}_{2(g)} \quad \Delta H = -394\text{KJ/mol}$   
 $\text{Ca}_{(s)} + \text{C}_{(s)} + \frac{3}{2} \text{O}_{2(g)} \longrightarrow \text{CaCO}_{3(s)} \quad \Delta H = -1207\text{KJ/mol}$   
 Calculate the enthalpy change for the reaction:  
 $\text{Ca}_{(s)} + \text{CO}_{2(g)} \longrightarrow \text{CaCO}_{3(s)}$
4. 0.92g of ethanol were found to burn in excess air producing a temperature rise of 32.5°C in 200cm<sup>3</sup> of water.  
 C=12.0 H=1.0 O=16.0  
 Density of water 1g/cm<sup>3</sup>  
 Specific heat capacity of water 4.2kj kg<sup>-1</sup>k<sup>-1</sup>
- a) Write the equation for combustion of ethanol  
 b) Determine the molar heat of combustion of ethanol
5. Study the information in the following table and answer the questions that follow. The letters do not represent the actual chemical symbols of the elements.
- | ELEMENT            | U  | V  | W | X  | Y  | Z  |
|--------------------|----|----|---|----|----|----|
| NUMBER OF PROTONS  | 18 | 20 | 6 | 16 | 19 | 17 |
| NUMBER OF NEUTRONS | 22 | 20 | 8 | 16 | 20 | 20 |
- Which of the above elements are:  
 (i) Likely to be radioactive?  
 (ii) Able to form a compound with the highest ionic character?
6. The diagram below shows energy levels for the reaction

- (a) Work out the activation energy for the reaction  
 (b) Calculate the heat of formation of **HF**  
 (c) Is the reaction endothermic or exothermic?
7. Using the heats of combustion of the following substances, calculate the heat of formation of ethanol
- $$\text{C}(\text{s}) + \text{O}_2(\text{g}) \longrightarrow \text{CO}_2(\text{g}); \Delta\text{H} = -393\text{KJmol}^{-1}$$
- $$\text{H}_2(\text{g}) + \frac{1}{2} \text{O}_2(\text{g}) \longrightarrow \text{H}_2\text{O}(\text{l}); \Delta\text{H} = -286\text{KJmol}^{-1}$$
- $$\text{CH}_3\text{CH}_2\text{OH}(\text{l}) + \text{O}_2(\text{g}) \longrightarrow 2\text{CO}_2(\text{g}) + 3\text{H}_2\text{O}(\text{l}); \Delta\text{H} = 1386\text{KJmol}^{-1}$$

8. Nitrogen and hydrogen react reversibly according to the equation:-  

$$\text{N}_2(\text{g}) + 3\text{H}_2(\text{g}) \rightleftharpoons 2\text{NH}_3(\text{g}); \Delta\text{H} = -92\text{kJmol}^{-1}$$
  
 The energy level diagram for the above reaction is shown below:-

- (a) How would the yield of ammonia be affected by:  
 (i) A decrease in temperature  
 (ii) An increase in pressure  
 (b) How does a catalyst affect reversible reaction already in equilibrium?  
 (c) On the above diagram, sketch the energy level diagram that would be obtained when iron catalyst is added to the reaction
9. Study the table below and answer the questions that follow

<u>Bond type</u>	<u>bond energy kJmol<sup>-1</sup></u>
C-C	346
C = C	610
C-H	413
C-Br	280
Br-Br	193

- a) Calculate the enthalpy change for the following reaction  

$$\text{C}_2\text{H}_4(\text{g}) + \text{Br}_2(\text{g}) \longrightarrow \text{C}_2\text{H}_4\text{Br}_2(\text{g})$$
  
 b) Name the type of reaction that took place in (a) above

**1 mark**

10. Bond energies for some bonds are tabulated below:-

BOND	BOND ENERGY KJ/mol
H – H	436
C = C	610
C- H	410
C - C	345

Use the bond energies to estimate the enthalpy for the reaction

11. The table shows the results obtained when 20.2g of potassium nitrate was added in 50cm<sup>3</sup> of water.

Time in (min)	0.0	0.3	1.0	1.3	2.0	2.3	3.0	3.3	4.0
Temperature (°C)	25.0	25.0	25.0	25.0	17.0	17.0	20.0	20.0	20.0

- (i) Draw the graph of temperature against time  
 (ii) Using the graph, determine the temperature change  
 (iii) Calculate the heat change  
 (iv) Find the molar heat of solution of potassium nitrate
12. When 1.6g of ammonium nitrate were dissolved in 100cm<sup>3</sup> of water, the temperature dropped by 6°C. Calculate its enthalpy change. (Density of water = 1g/cm<sup>3</sup>, specific heat capacity is 4.2kJ kg<sup>-1</sup>K<sup>-1</sup>)

13. Sodium hydrogen carbonate was strongly heated.  
 a) Write an equation for the reaction  
 b) The grid below shows part of the periodic table. Use it to answer the questions that follow. The letters are not the actual symbols.

A								
B				C			D	E
L	F		G	H			J	
						K		

- i) Write the equation for the reaction that occurs between elements **L** and **D**  
 ii) The oxide of **G** reacts with both hydrochloric acid and sodium hydroxide. What is the nature of the oxide of **G**?  
 iii) Explain why element **H** has a higher boiling point than element **D**.  
 iv) State **one** use of element **E**  
 v) Compare and explain the atomic radius of **B** and **C**  
 vi) 11.5g of **L** was completely burnt in oxygen. Calculate the volume of gas that was used. (L = 23, molar gas volume at room temperature is 24dm<sup>3</sup>)
14. A student has been provided with sodium hydroxide solution of 2M and hydrobromic acid of 4M. He was asked to investigate the equation for the reaction between these two substances and hence determine the molar enthalpy of neutralization. He carried out the reaction and obtained the following results:-

Vol. of 4M Hydrobromic acid added to 20cm <sup>3</sup> of 2M NaOH	Temperature of the mixture (°C)
4.0	26.8
6.0	30.0
8.0	33.2
10.0	36.0
12.0	35.2
14.0	34.4
20.0	30.8

- (a) Draw a graph of the temperature of the mixture (vertical axis against the volume of the acid added) \*
- (b) Using the graph estimate the temperature of the mixture when 17cm<sup>3</sup> of the acid was added
- (c) Both solutions were at room temperature at the start of the experiment. Use your graph to estimate the room temperature (½mk)
- (d) What is the significance of the highest temperature of the solution mixture? \*
- (e) The temperature of the mixture increased during the first additions of the acid. Why did the temperature increase? \*
- (f) Suggest a reason why the temperature decreased during the latter part of the experiment
- (g) Use your graph to determine the volume of 4M Hydrobromic acid which just neutralize 20cm<sup>3</sup> of 2M NaOH \*
- (h) How many moles of Hydrobromic acid are present in your answer in (g) above? \*
- (i) How many moles of NaOH are present in 20cm<sup>3</sup> of 2M of NaOH solution? \*
- (j) Use your answers in (h) and (i) above to write an equation of the reaction taking place in the experiment. Explain clearly how you have used your answers (1½mks)
- (k) Determine the molar enthalpy of neutralization of hydrobromic acid (1½mks)
15. (a) The following results were obtained in an experiment to determine the enthalpy of solution of sodium hydroxide
- Mass of plastic beaker = 8.0g  
 Mass of plastic beaker + distilled water = 108.15g  
 Mass of plastic beaker + distilled water + sodium hydroxide = 114.35g
- The table below shows the temperature at fixed times after mixing
- | Time/seconds     | 0  | 30 | 60 | 90 | 120 | 150 | 180 | 210 |
|------------------|----|----|----|----|-----|-----|-----|-----|
| Temperature (°C) | 15 | 21 | 29 | 28 | 27  | 26  | 26  | 25  |
- (i) Plot a graph of temperature (y-axis) against time (x-axis)
- (ii) From your graph, determine the maximum temperature attained
- (iii) Determine the temperature change of the reaction
- (iv) Calculate the number of moles of sodium hydroxide used in the experiment (Na = 11, H = 1, O = 16)
- (v) Use your results to determine the molar enthalpy solution of sodium hydroxide. (Density of solution is 1g cm<sup>-3</sup>, specific heat capacity of solution = 4.18 KJ<sup>-1</sup>K<sup>-1</sup>)
- (b) Below is an energy level diagram of the exothermic reaction
- CH<sub>4(g)</sub> + 2O<sub>2(g)</sub> → CO<sub>2(g)</sub> + 2H<sub>2</sub>O ΔH = -890KJ

Examine the energy level diagram below and use it to answer the questions that follow

- (b) (i) Which  $\Delta H$  values will have negative sign?  
 (ii) What physical change is being represented where enthalpy change  $\Delta H_4$  is involved? ( 1/2mk)  
 (iii) In terms of  $\Delta H_1$ ,  $\Delta H_2$ ,  $\Delta H_3$  and  $\Delta H_4$ , give the overall enthalpy change for the reaction:-  

$$\text{H}_2(\text{g}) + \frac{1}{2} \text{O}_2(\text{g}) \longrightarrow \text{H}_2\text{O}(\text{l})$$
  
 (iv) Is the reaction in (iii) above exothermic or endothermic?
16. (I) Study the graph below and answer the questions which follow:

- (a) Distinguish between molar latent heat of fusion and molar latent heat of vaporization  
 (b) (i) Explain the changes occurring between points  
**BC** ..... **CD** .....
- (ii) In an experiment to determine molar enthalpy of neutralization of hydrochloric acid using potassium hydroxide, the data below was obtained. The concentration of potassium hydroxide used was 0.5M

Volume of 0.5M KOH (cm <sup>3</sup> )	0	5	10	15	20	25	30	35
Total volume of acid + Base	20	25	30	35	40	45	50	55
Temperature (°C)	24	26	27	28	29	29	28	27

- (i) Plot a graph of temperature (y-axis) against volume of potassium hydroxide used
- (ii) From your graph:  
 (a) Determine the temperature change  
 (b) Find the volume of potassium hydroxide which completely neutralized 20cm<sup>3</sup> of the acid  
 (iii) Calculate the heat change for the reaction ( $C = 4.2\text{Jg}^{-1}\text{K}^{-1}$  density of solution =  $1\text{g/dm}^3$ )  
 (iv) Calculate the molar enthalpy of neutralization of hydrochloric acid with potassium hydroxide
17. A typical electrolysis cell uses a current of 40,000 amperes. Calculate the mass

- (in Kg of aluminium produced in one hour). (Al = 27) (Faraday = 96500 Coloumbs )
18. (a) Biogas is a mixture of mainly Carbon (IV) Oxide and methane.  
 (i) Give a reason why biogas can be used as a fuel  
 (ii) Other than fractional distillation, describe a method that can be used to determine the percentage of methane in biogas

19. Consider the following equilibrium reaction.

- a) State and explain the effect of formation of hydrogen chloride if pressure was increased in the equation above
20. Turning of fossil fuels has adverse environmental effects:-  
 a) Name **two** pollutants from the burning of petroleum products  
 b) Give **one** precaution taken to minimise the pollution by fossil fuels
21. (a) Define molar heat of neutralization  
 (b) The rise in temperature when 50cm<sup>3</sup> of sodium hydroxide is reacted with two acids is given in the table below:-

Acid	50cm <sup>3</sup> of HCl	50cm of Oxalic acid
Temp rise (°C)	7	4

- (i) Explain the difference in the temperature.
22. Calculate the latent heat of vaporization of water

Given the following thermo chemical equations:-

23. (a) Define the term fuel  
 (b) State **four** reasons why wood fuel is chosen for domestic cooking

24. The setup bellow was used to investigate the changes that take place when sodium hydroxide pellets dissolve in water.

- a) Why is a plastic beaker used instead of a metallic beaker?  
 b) State and explain the observations made in the above reaction
25. (a) What is a fuel? (1mark)  
 (b) Other than the cost, state **two** other factors to consider when choosing a fuel.

26. The equation below represents changes in the physical state of ions metal:

- a) Calculate the amount of heat energy required to change 10kg of solid iron to gaseous iron

Fe = 56

- b) Iodine can react with chlorine as shown below:-

- Determine the molar enthalpy change for this reaction  
 c) Draw an energy level diagram for the reaction in (b) above  
 27. Study the diagram below and answer the questions that follow:

a) What do  $\Delta H_1$  and  $\Delta H_2$  represent?

$\Delta H_1$  .....

$\Delta H_2$  .....

b) Write an expression to show the relationship between  $\Delta H_1$ ,  $\Delta H_2$  and  $\Delta H_3$ .

## Reaction rates and reversible reactions

1. Study the following equilibrium reaction and answer the questions that follow:-

Given that in an acid solution,  $\text{H}_3\text{O}^+_{(\text{aq})}$  act in place of hydrogen ions,  $\text{H}^+$ , according to the equation.

Explain what would be observed when potassium hydroxide solution is added to the above equilibrium mixture

2. The scheme below shows the energy changes that take place between ice, water and steam. Study it and answer the questions that follow:-

(a) What name is given to the energy change  $\Delta H_4$ ?

(b) What is the sign  $\Delta H_3$ , give a reason

3. The table below gives bond energies for three covalent bonds

Bond	Bond energy (KJmol <sup>-1</sup> )
H – H	435
Cl – Cl	240
H – Cl	430

(a) Calculate the energy change for the following reaction:

- (b) Sketch an energy level diagram for the reaction in (a) above
4. The sketch below was obtained when 2g of magnesium was reacted with excess of 2M hydrochloric acid. The volume of hydrogen evolved was then plotted against time as shown below:

- (a) On the same axis plot the graph that would be obtained if 1M hydrochloric acid was used instead of 2M hydrochloric acid. Explain
- (b) Explain the significance of the flat portion **BC** of the curve
5. In a closed system an equilibrium exists between Nitrogen (IV) Oxide and dinitrogen tetraoxide as shown in the equation below:
- $$\text{N}_2\text{O}_4(\text{g}) \rightleftharpoons 2\text{NO}_2(\text{g}); \Delta H = + 27.5\text{KJ}$$
- Pale yellow                      Reddish brown
- (a) State and explain the observation when a glass syringe containing the equilibrium mixture is immersed in ice-cold water
- (b) If the piston of the syringe is pushed, state the effect on the position of the equilibrium
6. The table below gives the volumes of the gas produced when different volumes of 2M hydrochloric acid were reacted with 1.0g of a lump of an alloy of Magnesium and copper at room temperature

Volume of 2M hydrochloric acid (cm <sup>3</sup> )	Volume of gas (cm <sup>3</sup> )
0	0
10	240
20	480
30	600
40	600
50	600

- (a) Write an equation for the reaction that occurred
- (b) On the grid provided below, plot a graph of the volume of the gas produced (vertical axis) against the volume of acid added (Note that before the reaction comes to completion, the volume of the gas produced is directly proportional to the volume of the acid added)
- (c) From the graph, determine:
- The volume of the gas produced if 13.0cm<sup>3</sup> of 2M hydrochloric acid had been used
  - The volume of 2M hydrochloric acid required for the reaction to go to completion
- (d) State and explain the effect on the rate of production of the gas if:
- 1.0g of the lump of the alloy were replaced by 1.0g powder of the alloy
  - The reaction was carried out at 35°C.

7. In a series of experiments in which magnesium ribbon of uniform width reacted with 2.0M Hydrochloric acid, the rates of evolution of hydrogen gas were found to be as follows:-

Length of ribbon (cm)	1.0	2.0	3.0	4.0	5.0	6.0	7.0
Rate of Evolution of hydrogen (cm <sup>3</sup> /min)	1.1	1.8	2.7	3.6	4.6	5.4	6.1

- (I) (a) Draw a graph of rate of evolution of hydrogen gas against length of ribbon \*  
 (b) What conclusion can you make from this graph? \*  
 (c) Determine the rate of evolution of hydrogen gas from a piece of magnesium ribbon 12cm long under the same conditions \*  
 (d) With dotted line, sketch on the same axis the graph that would be obtained if all the ribbons were ground into powder \*
- (II) (a) The curves below represent the changes in concentration of substances E and F with time in reaction

- (i) Which curve represents the change in the concentration of substance F? Give a reason \*  
 (ii) Give **one** reason for the shapes of the curves after two minutes \*
8. A typical electrolysis cell uses a current of 40,000 amperes. Calculate the mass (in Kg of aluminium produced in one hour). (Al = 27) (Faraday = 96500Coulombs )
9. The table below shows the volumes of nitrogen (IV) oxide gas produced when different volumes of 1M nitric acid were each reacted with 0.635g of copper at room temperature.

Volume of 1M nitric acid (cm <sup>3</sup> )	Volume of Nitrogen (IV) oxide gas(cm <sup>3</sup> )
5	60
15	180
25	300
35	420
45	480
55	480

- a) Give a reason why hydrochloric acid can not be used instead of nitric acid  
 b) Explain how the rate of the reaction between copper and nitric acid would be affected if the temperature of the reaction mixture was raised  
 c) On the grid provided below, plot a graph of the volume of the gas produced (vertical axis) against volume of acid  
 d) Using the graph, determine the volume of:  
 (i) Nitrogen (IV) oxide produced when 30cm<sup>3</sup> of 1M nitric acid were reacted with 0.635g of copper  
 (ii) 1M nitric acid which would react completely with 0.635g of copper

10. The graph below represents the volume of gas collected against time when dilute sulphuric acid is reacted with Zinc granules:-

- (a) Determine the rate of reaction between the 1<sup>st</sup> and 3<sup>rd</sup> minute  
 (b) When did the reaction stop?  
 (c) Give a possible reason for the reaction to stop
11. The equation below represents a reaction that takes place in an industrial process  
 $4\text{NH}_3(\text{g}) + 5\text{O}_2(\text{g}) \longrightarrow 6\text{H}_2\text{O}(\text{g}) + 4\text{NO}(\text{g})$   
 (a) Name the catalyst used  
 (b) What are the other conditions for the reaction?  
 (c) Why are the products cooled before being oxidised?
12. Nitrogen reacts with hydrogen according to the equation below:-  
 $\text{N}_2(\text{g}) + 3\text{H}_2(\text{g}) \rightleftharpoons 2\text{NH}_3(\text{g}) \Delta H = -92\text{KJ}$   
 (a) How would the yield of ammonia be affected by increase in :-  
 (i) Pressure  
 (ii) temperature  
 (b) The ammonia produced is isolated from the other gases from time to time. How does this affect the equilibrium?
13. Explain how you would obtain an insoluble salt  $\text{XSO}_4$  when you are provided with the following :-  
 (i) Distilled water  
 (ii) Solid  $\text{YSO}_4$  which is soluble in water  
 (iii) Solid salt  $\text{X}(\text{NO}_3)_2$
14. Metal **R** and **S** were used to form a cell. The following half equations show the standard electrode potentials of the half cells. (**R** and **S** are not actual symbols of the element)  
 $\text{R}^{2+} + 2\text{e}^- \rightleftharpoons \text{R}(\text{s}) \quad E^\theta = -2.04\text{V}$   
 $\text{S}^{2+}(\text{aq}) + 2\text{e}^- \rightleftharpoons \text{S}(\text{s}) \quad E^\theta = -0.47\text{V}$   
 Write the full equation for the cell and calculate the e.m.f

15. The apparatus below were used to study the properties of air

- (a) State **two** observations made at the end of the experiment  
 (b) Give **one** simple method that can be used to prevent rusting
16. Equal volumes of 1M monobasic acids **K** and **L** were each reacted with excess zinc granules. The table below shows the volumes of the gas produced after two minutes

Acid	Volume of gas (cm <sup>3</sup> )
<b>K</b>	40
<b>L</b>	100

- (a) Explain the difference in the volumes of the gas produced  
 (b) How can the production of the gas be increased?
17. The following is a thermochemical equation for the reaction between hydrogen and oxygen  

$$\text{H}_{2(g)} + \text{O}_{2(g)} \longrightarrow \text{H}_2\text{O}_{(l)} \quad \Delta H = -287\text{kJmol}^{-1}$$
 Calculate the bond energy between the elements in water given that:  
 $\text{O} = \text{O} = +496\text{kJmol}^{-1}$        $\text{H} - \text{H} = +435\text{kJmol}^{-1}$
18.  $\text{AgClO}_2(s) \rightleftharpoons \text{Ag}(s) + \frac{1}{2} \text{Cl}_2(g) + \text{O}_2(g) \quad \Delta H = 0.00\text{KJ/mol}$   
 What is the effect on the position of equilibrium of the above system if temperature is decreased? Give a reason
19. Sodium carbonate was reacted with dilute sulphuric (VI) acid at 25°C. The volume of carbon (IV) Oxide gas liberated was recorded at 10seconds interval. Below is a graph of the volume of carbon (IV) Oxide gas evolved against time.

(a) On the same axes, sketch the curve labelled V that would be obtained if Barium carbonate was used instead of sodium carbonate. (All conditions remain constant)

20. (a) What is meant by activation energy?  
 (b) A certain mass of unground compound X1 reacted with excess dilute hydrochloric acid. The volume of carbon (IV) oxide gas liberated was measured after every 20 seconds. The results were presented as shown in the graph below:-

- (i) On the same axes, sketch the curve that would be obtained if the experiment was repeated using ground compound X1  
 (ii) Explain the shape of your curve in (b) (i) above
22. The sketch below shows the rate at which substance T is converted into U. Study it and answer the questions that follows:-

When the equilibrium has been established the two curves become horizontal after sometime. Explain the effect of the amount of the two reactants and products

23. Elements **A**, **B**, **C**, and **D** are not actual symbols, have atomic numbers **19**, **9**, **12** and **10** respectively.
- (a) Which **two** elements represent non-metals  
 (b) Write the formula of the compound formed between elements **B** and **C** and identify the bond present in the compound
24. An equilibrium is established between nitrogen tetra -oxide and nitrogen (IV) oxide as shown below: State and explain what happens when temperature is increased
- $$\text{N}_2\text{O}_4(\text{l}) \rightleftharpoons 2\text{NO}_2(\text{g})$$
- Pale yellow  Red-brown fumes

25. The graph below shows the amount of calcium carbonate and calcium chloride varying with time in the reactions:

- (a) Which curve shows the amount of calcium chloride varying with time? (1mk)  
 (b) Explain why the two curves become horizontal after a given period of time. (1mk)  
 (c) Sketch on the graph how curve II would appear if the experiment was repeated using a more dilute hydrochloric acid solution (1mk)
26. State the effect on the equilibrium when;  
 a) Pressure is increased  
 b) Oxygen gas is added

6. An equilibrium is established between  $\text{CrO}_4$  and  $\text{H}^+$  ions as shown below:

27. State and explain the observation made when aqueous sodium hydroxide is added to the equilibrium mixture
28. Two experiments were carried out as follows and the volume of hydrogen gas evolved measured at intervals of 10 seconds for 100 seconds.  
 (i) 8cm of magnesium ribbon was added to 1M hydrochloric acid  
 (ii) 8cm of magnesium ribbon was added to 0.5M hydrochloric acid  
 Graphs of volume of hydrogen evolved against time were plotted

- (a) Which of the graph was obtained for reaction (i) above? Explain  
 (b) Explain the general shape of the graph
29. Bromine dissolves in water forming a brown solution, according to the dynamic equation below.

State and explain the observation that could be made if a solution of sodium hydroxide is added to the system

## Electrochemistry

1. The setup below was used to carry out the electrolysis of Magnesium sulphate solution using inert electrodes.

- (i) Name a suitable pair of electrode that can be used in the above process.  
 (ii) State and explain the changes on the concentration of magnesium sulphate solution as the process proceeds.
2. During purification of copper by electrolysis, 1.48g of copper were deposited when a current was passed through aqueous copper (II) sulphate for 2 ½ hours. Calculate the amount of current passed.  
 (Cu = 63.5 1Faraday = 96500C)
3. The diagram below represents a set-up that can be used for the electrolysis of dilute sulphuric acid

- (a) Name the electrodes **A** and **B**  
 (b) Write an equation for the reaction taking place at electrode **B**  
 (c) What happens to the concentration dilute sulphuric acid as the reaction continues?
4. In an electrolysis, a current of 200A was passed through molten oxide of metal **Q** for 58 minutes and 64.8g of the metal deposited. Determine;  
 i) Charge on metal **Q**  
 ii) The volume of oxygen gas produced at standard temperature and pressure  
 Q = 27 IF = 96500C, molar gas volume stp = 22.4dm<sup>3</sup>
5. Consider the reduction potentials below.

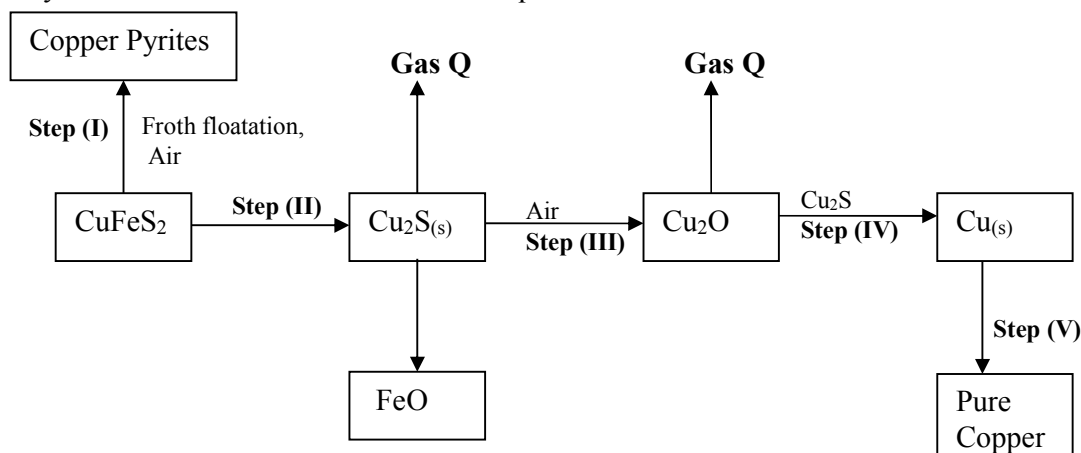

- Write the overall Redox reaction that takes place when the above half cells are connected.
- Determine the  $E^\theta$  value of the above cell.
- Calculate which group of the periodic table is element F?

6. An oxide of element F has the following formula:-  $\text{F}_2\text{O}_5$   
 (a) Determine the oxidation state of F

Element	Sodium	Magnesium	Aluminium
Atomic number	11	12	13

7. The table below gives elements and their atomic numbers. Answer the questions that follow:  
 Compare the electrical conductivity of sodium and aluminium. Explain
8. What mass of Zinc will be deposited from a solution of Zinc (II) Chloride when a current of 3A is passed through the Zinc (II) Chloride solution during electrolysis for 50minutes?  
 (Zn= 65, 1 Faraday = 96500C)
9. Study the flow chart below and answer the questions that follow:

- Name gas Q
  - With the help of diagram, describe how step (V) is carried out
10. Nitrogen and hydrogen react reversibly according to the equation:-  
 $\text{N}_{2(\text{g})} + 3\text{H}_{2(\text{g})} \rightleftharpoons 2\text{NH}_{3(\text{g})}; \Delta H = -92\text{kJmol}^{-1}$   
 The energy level diagram for the above reaction is shown below:-

- How would the yield of ammonia be affected by:
  - A decrease in temperature

- (ii) An increase in pressure  
 (b) How does a catalyst affect reversible reaction already in equilibrium?  
 (c) On the above diagram, sketch the energy level diagram that would be obtained when iron catalyst is added to the reaction

11. Study the electrode potentials in the table below and answer the question that follow:  
 (Letters are not the actual symbols of elements)

	$(E^\theta / \text{Volts})$
$\text{H}^{2+}_{(\text{aq})} + 2\text{e}^- \longrightarrow \text{H}_{(\text{s})}$	+0.34
$\text{Z}^{2+}_{(\text{aq})} + 2\text{e}^- \longrightarrow \text{Z}_{(\text{s})}$	-2.38
$\text{G}^{+}_{(\text{aq})} + \text{e}^- \longrightarrow \text{G}_{(\text{s})}$	+0.80
$\text{T}^{2+} + 2\text{e}^- \longrightarrow \text{T}_{(\text{s})}$	-2.87

- (a) Which **one** is the strongest reducing agent?  
 (b) Write the ionic equation for the reaction that takes place when **Z** is dipped in a solution of  $\text{G}^+$  ions  
 (c) Calculate the  $E^\theta$  cell value of the reaction in **22.(b)** above
12. When a hydrocarbon was completely burnt in oxygen, 4.2g of Carbon (IV) oxide and 1.71g of water were formed. Determine the empirical of the hydrocarbon. (H=10 C=12.0 O=16.0)
13. During electrolysis of aqueous copper (II) sulphate 144,750 coulombs of electricity were used. Calculate the mass of copper metal that was obtained (Cu =64 1Faraday = 96,5000 coulombs)
14. Sodium metal reacts with oxygen according to the following equation:-  

$$6\text{Na}_{(\text{s})} + 2\text{O}_{2(\text{g})} \xrightarrow{\text{Heat}} \text{Na}_2\text{O}_{2(\text{s})} + 2\text{Na}_2\text{O}_{(\text{s})}$$
 State **one** physical and **one** chemical difference between  $\text{Na}_2\text{O}_2$  and  $\text{Na}_2\text{O}$   
 Physical difference .....  
 Chemical difference.....

15. The diagram below shows an electrochemical cell:

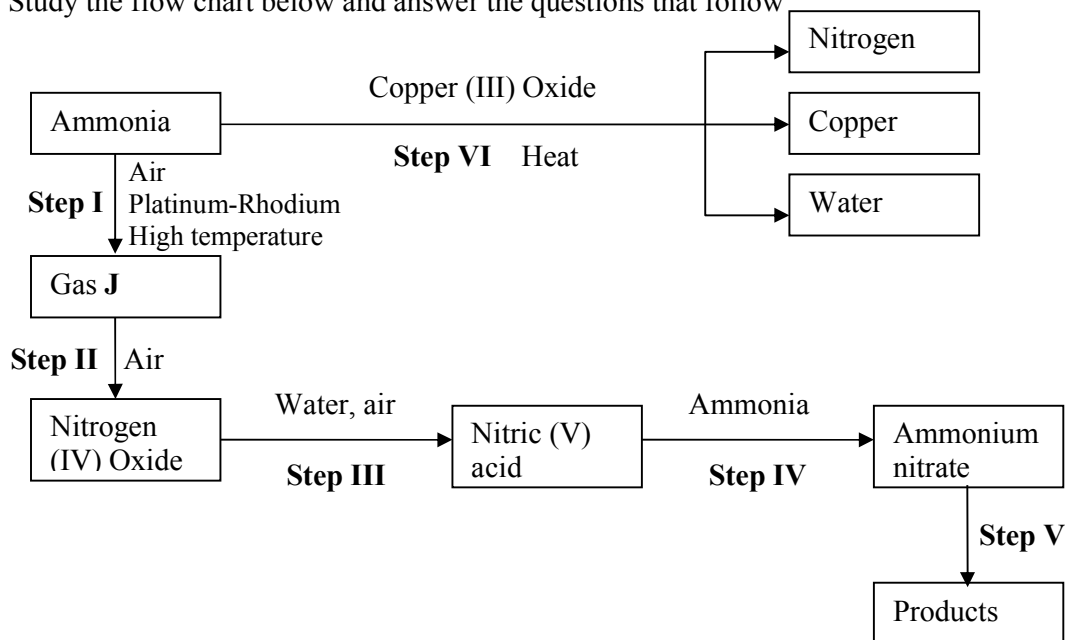

- (a) Give the formula of the possible salt **L**  
 (b) On the diagram show the direction of movement of electrons  
 (c) Write the cell representation
6. The reaction below is a redox reaction  

$$\text{MnO}_4^-_{(\text{aq})} + 8\text{H}^+_{(\text{aq})} + 5\text{Fe}^{2+}_{(\text{aq})} \longrightarrow \quad )$$
 (a) Identify the species reduced. Explain  
 (b) Write the equation for the oxidation reaction
17. Consider the cell diagram below  

$$\text{Cr}_{(\text{s})} / \text{Cr}^{3+}_{(\text{aq})} // \text{Fe}^{2+}_{(\text{aq})} / \text{Fe}_{(\text{s})} \quad E^\theta = +0.30\text{V}$$
 i) Write the overall cell reaction for the above electrochemical cell

- ii) Given that  $E^\ominus$  value for  $\text{Fe}^{2+}_{(\text{aq})}/\text{Fe}_{(\text{s})}$  is  $-0.40\text{V}$ , calculate the  $E^\ominus$  value for  $\text{Cr}^{3+}_{(\text{aq})}/\text{Cr}_{(\text{s})}$
18. (a) Describe the process by which Trichloro fluoromethane Nitrogen is obtained from air on a large scale

(b) Study the flow chart below and answer the questions that follow

- (i) Identify gas **J**
- (ii) Using oxidation numbers, show that ammonia is the reducing agent in step **VI**
- (iii) Write the equation that occurs in step **V**
- (iv) Give **one** use of ammonium nitrate
- (c) The table below shows the observations made when aqueous ammonia was added to cations of elements **E**, **F** and **G** until in excess

Cation of	Addition of a few drops of aqueous ammonia	Addition of excess aqueous ammonia
<b>E</b>	White precipitate	Insoluble
<b>F</b>	No precipitate	No precipitate
<b>G</b>	White precipitate	Dissolves

- (i) Select the cation that is likely to be  $\text{Zn}^{2+}$  .....
- (ii) Given that the formula of the cation of element **E** is  $\text{E}^{2+}$ , write the ionic equation for the reaction between  $\text{E}^{2+}$  and aqueous ammonia
19. a) Study the standard electrode potential for the half-cells given below and answer the questions that follow. (The letter do not represent the actual symbols of the elements)

$E^\ominus$ Volts		
$\text{N}^+_{(\text{aq})} + \text{e}^-$	$\text{N}_{(\text{s})}$ ;	$-2.92$
$\text{J}^+_{(\text{aq})} + \text{e}^-$	$\text{J}_{(\text{s})}$ ;	$+0.52$
$\text{K}^+_{(\text{aq})} + \text{e}^-$	$\frac{1}{2} \text{K}_{2(\text{g})}$ ;	$0.00$
$\frac{1}{2} \text{G}_{2(\text{g})} + \text{e}^-$	$\text{G}^-_{(\text{aq})}$ ;	$+1.36$
$\text{M}^{2+}_{(\text{aq})} + 2\text{e}^-$	$\text{M}_{(\text{s})}$ ;	$-0.44$

- i) Identify the strongest oxidizing agents. Give a reason for your answer
- ii) Which two half-cells would produce the highest potential difference when combined?

iii) In the space below draw a complete electro chemical cell of the two-half cells mentioned in (ii) above

20. Below is a simplified diagram of the Down's cell for the extraction of sodium. Study it and answer the question that follow:-

- (i) From which substances are the electrodes made?  
 Cathode.....  
 Anode.....
- (ii) State and explain why sodium chloride is mixed with calcium chloride
- (iii) What is the role of the iron gauze
- (iv) Write equations for the reaction at :-  
 cathode  
 anode
- (v) Which property of sodium makes it possible to collect it as shown?
- (b) When a current of 6.42 A was passed through an electrolyte  $Y^{2+}$  ions for 10 minutes, 2.74 g of Y were deposited
- (i) Calculate the quantity of electricity passed in the experiment
- (ii) Determine the relative atomic mass of Y (1 Faraday = 96000 coulombs)
21. (a) The table gives the standard redox potentials for a number of half reactions. Use it to answer the questions that follow:-
- |  | <u>(E<sup>0</sup>/Volts)</u> |
|--|------------------------------|
| $Zn^{2+}_{(aq)} + 2e^- \rightleftharpoons Zn_{(s)}$      | -0.76                        |
| $Fe^{2+}_{(aq)} + 2e^- \rightleftharpoons Fe_{(s)}$      | -0.44                        |
| $I_2(l) + 2e^- \rightleftharpoons 2I^-_{(aq)}$           | +0.54                        |
| $Fe^{3+}_{(aq)} + e^- \rightleftharpoons Fe^{2+}_{(aq)}$ | +0.77                        |
| $Ag^+ + e^- \rightleftharpoons Ag_{(s)}$                 | +0.88                        |
- (i) Relative to which half-cell reaction are the above electrode potentials expressed?
- (ii) Calculate the e.m.f of the cell made up by combining the  $I_{2(l)}/2I^-_{(aq)}$  electrode and  $Zn^{2+}_{(aq)}/Zn_{(s)}$  electrode
- (iii) Which of the substances listed in the above table is :-  
 I. The strongest oxidising agent  
 II. The strongest reducing agent
- (iv) Which substances could be used to convert iodide ions to iodine? Write balanced equations for any possible conversions
22. a) The standard electrode potential for the elements chlorine and magnesium are:-

- i) Which one of the two elements will act as an oxidizing agent? Explain.  
 ii) Calculate the electromotive force of a cell where the overall reaction is:-

- b) The table below gives the reduction standard electrode potentials for divalent metals. The letters are not their actual symbols. Use them to answer the questions that follow:-

<u>Metal</u>	<u>E<sup>θ</sup> (volts)</u>
P	+1.50
Q	- 0.44
R	+0.34
S	+0.76

- i) Select **two** metals whose half cells can produce the highest voltage when connected.  
 ii) Draw a well labelled diagram of electrochemical cell formed by half-cells of metals **P** and **Q**  
 iii) Calculate the voltage produced by the cell in (ii) above  
 c) When nitrate solution of a certain metal **X** was electrolysed, 1.174g of metal **X** was deposited by a current of 4 amperes flowing for 16minutes. Determine the formula of the metal nitrate. (1F= 96,500, R.A.M of **X**= 59)
23. Study carefully the information given below and answer the questions that follow:-

Substance	Physical state at e.t.p	Solubility in water	Other information
<b>A</b>	Solid	- Soluble - Blue solution	- solution conducts electricity forming two products <b>B</b> and <b>C</b> - <b>B</b> is solid and <b>C</b> is a greenish –yellow gas
<b>D</b>	Gas	- Soluble - Colourless solution	- Solution forms pale blue precipitate with <b>A</b> and then deep blue solution in excess
<b>E</b>	Solid	- Insoluble	- With a solution of <b>A</b> forms <b>B</b> and a colourless solution at E <sup>2+</sup> ions

- (a) Identify the substances represented by the letters  
 (b) Give equations for the reactions in which:-  
 (i) Substance **B** is formed from the solution of **A** on electrolysis  
 (ii) Substance **B** is formed from solution **A** when reacted with **E**  
 (c) Give **one** use of gas **C**  
 (d) Name the ion responsible for the deep blue solution
24. (a) Study the standard electrode potentials for the elements given below and answer the questions that follow. The letters do not represent the actual symbols of the elements

$\text{Q}_{2(g)} + 2e^-$	$\rightleftharpoons$	$2\text{Q}^-_{(aq)}$	$E^\theta$ +2.87
$\text{R}_{2(g)} + 2e^-$	$\rightleftharpoons$	$2\text{R}^-_{(aq)}$	+1.36
$\text{S}^{2+}_{(aq)} + 2e^-$	$\rightleftharpoons$	$\text{S}_{(s)}$	+ 1.23
$2\text{T}^+_{(aq)} + 2e^-$	$\rightleftharpoons$	$\text{T}_{2(g)}$	0.00
$\text{U}^{2+}_{(aq)} + 2e^-$	$\rightleftharpoons$	$\text{U}_{(s)}$	-0.13
$\text{V}^{2+}_{(aq)} + 2e^-$	$\rightleftharpoons$	$\text{V}_{(s)}$	-0.76

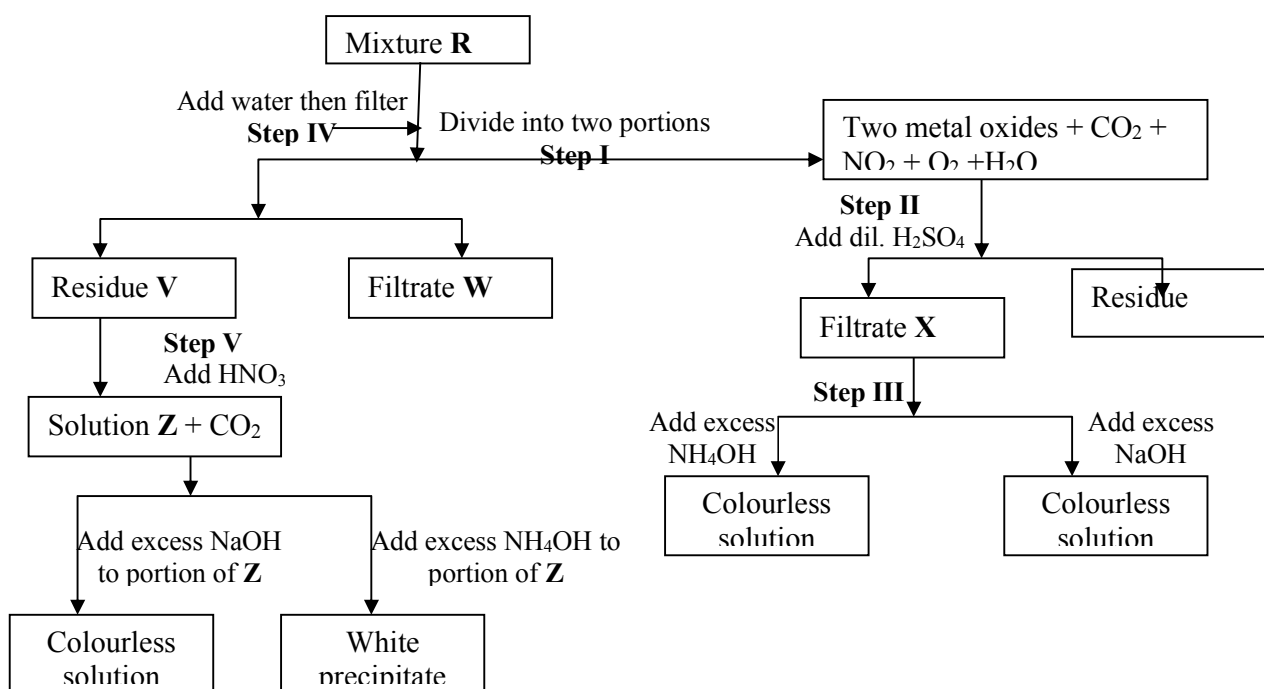

- (i) What is the E<sup>θ</sup> value of the weakest reducing agent?  
 (ii) Which element is likely to be hydrogen? Give a reason for your answer  
 (iii) Draw a diagram for the cell that would be obtained when the half cell of elements **S** and **V** are combined  
 (iv) Calculate the e.m.f of the electrochemical cell in a (iii) above

(b) The diagram below represents the electrolysis of dilute sulphuric (VI) acid

- Name the gases **X** and **Y**
- Write ionic equation for the formation of gas **X**
- At what electrode does reduction take place? Explain your answer
- Name the most suitable electrodes for this experiment. Explain your answer

25. The flow chart below shows an analysis of **mixture R** that contains two salts. Study it and answer the questions that follow:-

- Write **two** ionic equations for the reactions between the cation in filtrate **X** and aqueous ammonia (Ammonium hydroxide) until in excess
- What conclusion can be drawn from **Step IV** only? Explain
- What observation would indicate the presence of a  $\text{NO}_3^-$  ion in **step I**?
- Write the formula of the anion in **residue V**. Explain
- Suggest the identity of the cation present in solution **Z**
- Name the **two** salts present in mixture **R**

26. (a) The set-up below was used in the electrolysis of copper II nitrate solution:

- (i) What is electrolysis?
- (ii) Show the anode and cathode on the diagram
- (iii) Explain how you would confirm gas **P**
- (iv) Write the equation for the reaction occurring at
  - (a) Anode
  - (b) Cathode
- (v) State **two** changes that occur on the electrolyte after the experiment
- (b) Below are the standard electrode potentials for electrodes **B** and **D**

- (i) Identify the electrode which is ;
    - (a) The least reducing agent
    - (b) The strongest oxidizing agent
  - (ii) Calculate the e.m.f of the cell formed when the two electrodes are connected
  - (iii) Write a cell representative for the cell above
27. A typical electrolysis cell uses a current of 40,000 amperes. Calculate the mass (in Kg of aluminium produced in one hour). ( $\text{Al} = 27$ ) (Faraday = 96500 Coloumbs )
28. A strip of copper metal was immersed into a nitrate solution of metal Q overnight. Use the information below to answer questions that follow

	$E^\ominus$ (Volts)
$\text{Q}_{(\text{aq})} + \text{e}^- \longrightarrow \text{Q}_{(\text{s})}$	+0.80
$\text{Cu}^{2+}_{(\text{aq})} + 2\text{e}^- \longrightarrow \text{Cu}_{(\text{s})}$	+ 0.34

- (a) State the observations made at the end of the experiment
  - (b) Give a reason for the observations made in (a) above
  - (c) Calculate the e.m.f of the cell above
29. (a) Excess marble chips (Calcium carbonate) was put in a beaker containing  $150\text{cm}^3$  of dilute hydrochloric acid. The beaker was put on a weighing balance and the total loss in mass recorded after every two minutes as shown in the table below:

Time (min)	0	2	4	6	8	10
Total loss in mass (g)	0	1.8	2.45	2.95	3.2	3.3

(i)

Why was there a loss in mass?

- (ii) The average rate of reaction was faster between 0 and 2 minutes than between 6 and 8 minutes. Explain why

- (iii) State **one** way in which the rate of reaction can be increased
- (iv) When aqueous sodium sulphate was added to contents of the beaker, a white precipitate was formed;
- (I) Identify the white precipitate .....
- (II) Name **one** use of the substance named in (iv) (I) above
- b) A student performed the following experiment with an intention to extract calcium metal

- (i) The student was surprised that no calcium was produced in the experiment. Explain why no calcium was produced
- (ii) Write the equation for the reaction that occurred at the anode if the solution was concentrated
- (iii) The electrolysis involved passing an electric current of 4A for one hour. Calculate the mass of the product at the anode. (1Faraday = 96500C, Cl = 35.5, H = 1.0, O = 16, Ca = 40)

30. Cheptoo set-up some apparatus as shown in the diagram below:-

At the start of the experiment, the bulb did not light:-

- (a) State and explain the observation made when the tap was opened to allow the hydrogen chloride gas through the water for about 20 minutes
- (b) Write the chemical equation for the reaction that took place at the cathode
31. Metals **K** and **N** were connected to form a cell as shown in the diagram below. Their reduction potentials are as shown below:

- I. Write the equation for the half-cell reaction that occurs at  
 Metal **K** electrode  
 Metal **N** electrode
- II Identify **P** and state its role in the above setup  
 (i). Identity of **P**  
 (ii) . Role of **P** in the setup.
- III. On the diagram, show the flow of  
 I. Electrons  
 II. Current.
- IV Calculate cell potential (E) for the cell represented in the setup above
32. (a) The diagram below shows a Zinc –copper cell.

- (i) Given the standard electrode potential of Zinc is  $-0.76\text{V}$  and that of copper is  $+0.34\text{V}$ , suggest;  
 (i)The identity of **W** .....  
 (ii) The identity of **X** .....  
 (iii) The equation for the overall cell reaction  
 (iv) The reading on the voltmeter

(b) Sodium hydroxide may be manufactured by the electrolysis of brine as in the diagram below:-

- (i) State the chemical name of brine  
 (ii) Write the equations for the reactions at the electrodes  
 Anode  
 Cathode

(iii) Explain how sodium hydroxide is obtained from the product of this process

33. A typical electrolysis cell uses a current of 40,000 amperes. Calculate the mass (in kilograms) of aluminium produced in one hour ( $Al=27$ ,  $1\text{Faraday}=96,500$  coulombs)
34. The reaction between ammonia and oxygen to form Nitrogen (II) oxide is highly exothermic
- $$4\text{NH}_{3(g)} + 5\text{O}_{2(g)} \longrightarrow 4\text{NO}_{(g)} + 6\text{H}_2\text{O}_{(g)}$$
- The reaction is carried out in presence of platinum-rhodium catalyst at 1173k and a pressure of 911.952k pa.
- i) Explain how each of the following would affect the yield of Nitrogen(II) oxide gas:
- Reduction in pressure
  - Using a more efficient catalyst
35. The following table shows the standard reduction potentials of some half cells. Study the table and refer to it to answer the questions that follow;

Half reaction	$E^{\ominus}$ volts
$\text{P}^{4+}_{(aq)} + e^{-} \longrightarrow \text{P}^{3+}_{(aq)}$	+0.61
$\text{Q}^{3+}_{(aq)} + e^{-} \longrightarrow \text{Q}^{2+}_{(aq)}$	+0.77
$\text{R}_{2(g)} + 2e^{-} \longrightarrow 2\text{R}^{-}_{(aq)}$	+0.54
$\text{S}^{2+}_{(aq)} + 2e^{-} \longrightarrow \text{S}_{(s)}$	-0.44
$\text{T}^{2+}_{(aq)} + 2e^{-} \longrightarrow \text{T}_{(s)}$	-0.74

- Identify the strongest oxidizing agent
  - Which substance would be used to oxidize  $\text{R}^{-}$  ion to the atom R
  - Study the cell represented below;  

$$\text{T}_{(s)} / \text{T}^{2+}_{(aq)} // \text{S}^{2+}_{(aq)} / \text{S}_{(s)}$$
    - Identify the electrodes
    - Write equations for the reaction taking place in each half- cell
    - Determine the cell equation and the electromotive force (e.m.f) of the cell represented in (c) above
    - In which direction does the electrons flow in the external circuit of the cell whose e.m.f is determined in (iii) above
  - A steady current of 2.5A was passed for 15 minutes through a cell containing divalent ions  $\text{M}^{2+}$ . During this process 0.74g of metal M was deposited ( $IF = 96500\text{C}$ )
    - Calculate the quantity of electricity passed in this cell
    - Determine the relative atomic mass of M
36. The following table shows the standard reduction potentials of some half cells. Study the table and refer to it to answer the questions that follow;

Half reaction	$E^{\ominus}$ volts
$\text{P}^{4+}_{(aq)} + e^{-} \longrightarrow \text{P}^{3+}_{(aq)}$	+0.61
$\text{Q}^{3+}_{(aq)} + e^{-} \longrightarrow \text{Q}^{2+}_{(aq)}$	+0.77
$\text{R}_{2(g)} + 2e^{-} \longrightarrow 2\text{R}^{-}_{(aq)}$	+0.54
$\text{S}^{2+}_{(aq)} + 2e^{-} \longrightarrow \text{S}_{(s)}$	-0.44
$\text{T}^{2+}_{(aq)} + 2e^{-} \longrightarrow \text{T}_{(s)}$	-0.74

- Identify the strongest oxidizing agent
- Which substance would be used to oxidize  $\text{R}^{-}$  ion to the atom R
- Study the cell represented below;

- i) Identify the electrodes
  - ii) Write equations for the reaction taking place in each half- cell (2 mks)
  - iii) Determine the cell equation and the electromotive force (e.m.f) of the cell represented in (c) above
  - iv) In which direction does the electrons flow in the external circuit of the cell whose e.m.f is determined in (iii) above
  - d) A steady current of 2.5A was passed for 15 minutes through a cell containing divalent ions  $M^{2+}$ . During this process 0.74g of metal M was deposited ( $IF = 96500C$ )
    - i) Calculate the quantity of electricity passed in this cell
    - ii) Determine the relative atomic mass of **M**
37. In the equation below identify the reagent that acts as an acid in the forward reaction. Give a reason for your answer.
- $$NH_4^+_{(aq)} + H_2O_{(l)} \rightleftharpoons NH_{3(aq)} + H_3O^+_{(aq)}$$

38. A student set up the experiment shown below. Study it and answer the questions that follow.

- a) State any **two** observations the student made during the experiment
  - b) Explain what happens to the pH of the resultant solution at the end of the experiment
39. Copper (II) sulphate solution was electrolysed using copper electrode. A Current of 0.5A was passed for 64.3 minutes and a mass of 0.64g of copper was deposited. ( $Cu = 63.5$ )
- a) Which electrode decreased in mass during electrolysis? Explain
  - b) Calculate the quantity of charge needed to deposits 1 mole of copper
40. State and explain what is observed when crystals of iodine are heated gently
41. (a) State Faradays First Law of Electrolysis
- (b) Calculate the volume at s.t.p of hydrogen evolved when 2A of electricity are passed through dilute sulphuric acid for 2hours.
- (Molar gas volume at s.t.p =  $22.4dm^3$ , one Faraday= 96500coulombs)
42. The following is an equation for the reaction between ammonia and water
- $$NH_3(g) + H_2O(l) \rightleftharpoons NH_4^+_{(aq)} + OH^-_{(aq)}$$
- (a) Name the base in the backward reaction
43. The common ores of Zinc are zinc blende and calamine:-
- (i) Give the chemical formula of Zinc blende
  - (ii) Explain how the pollution caused by large scale extraction of Zinc can be reduced by having a fertilizer plant close to it
44. The oxides of calcium and phosphorous react as shown below:-
- $$6CaO_{(s)} + P_4O_{10(s)} \longrightarrow 2Ca_3(PO_4)_2(s)$$
- (i) Give a reason why these substances react and yet both are oxides
  - (ii) Work out the oxidation state of phosphorous in  $P_4O_{10}$
  - (iii) State **one** use of  $Ca_3(PO_4)_2$
45. The standard hydrogen electrode is used as the reference electrode. Some of the difficulties in using hydrogen gas as an electrode are:
- Hydrogen is a gas at 25°C

- Hydrogen does not conduct electricity
- The half-cell reaction,  $2\text{H}^+(\text{aq}) + 2\text{e}^- \rightleftharpoons \text{H}_2(\text{g})$  is slow and takes long to reach equilibrium.

46. Explain how these difficulties are solved in the standard hydrogen electrode  
The following are electrode potentials of the half cells

**Half cell**       **$E^\ominus$  volts**

$\text{M}^+(\text{aq}) / \text{M}(\text{s})$       -0.76

$\text{C}^{2+}(\text{aq}) / \text{C}(\text{s})$       -0.34

(a) Calculate the potential difference of the following cell.

$\text{M}(\text{s}) / \text{M}^{2+}(\text{aq}) // \text{C}^{2+}(\text{aq}) / \text{C}(\text{s})$

47. (a) Name **two** types of isotopes of phosphorous  
(b) Explain why phosphorus is stored in water and not in oil like sodium
48. Use the cell representation below to answer the questions that follow:-  
 $\text{X}(\text{s}) / \text{X}^{3+}(\text{aq}) // \text{W}^{2+}(\text{aq}) / \text{W}(\text{s})$   
(a) Write the equation for the cell reaction above  
(b) If the e.m.f of the cell is 0.30V and  $E^\ominus$  value for  $\text{W}^{2+}/\text{W}$  is -0.44volts, calculate the  $E^\ominus$  for  $\text{X}^{3+}(\text{aq}) / \text{X}(\text{s})$

49. The following diagram represents the electrolysis of dilute sodium chloride solution using inert electrodes

Determine the electrode at which different electrolytic products would be produced if the solution is electrolysed for several hours. Explain

50. Complete the following redox equations by adding the correct number of electrons on either reactant or product side of the redox equations:-

51. The following are standard reduction potentials;

Half-cell	$E^\ominus/\text{Volts}$	Using iron
$\text{Al}(\text{s}) / \text{Al}^{3+}(\text{aq})$	-1.66	
$\text{Zn}(\text{s}) / \text{Zn}^{2+}(\text{aq})$	-0.76	
$\text{Fe}(\text{s}) / \text{Fe}^{2+}(\text{aq})$	0.44	
$\text{Ni}(\text{s}) / \text{Ni}^{2+}(\text{aq})$	0.25	

Rewrite the  $E^\ominus$  values of the above half-cells using iron as a reference electrode

52. Calculate the mass of metal **J** that would be dissolved at the anode when a solution of **J (III)** nitrite is electrolysed using a current of 1.5amperes for 15minutes (1 Faraday = 96,500C;  $J = 52$ )

53. Consider the following standard electrode potentials:

Some modern cars are made from steel coated with other metals. Using this data above state and explain the best suited metal for coating steel

## Metals

1. The following diagram represents extraction of sodium by the Down's cell

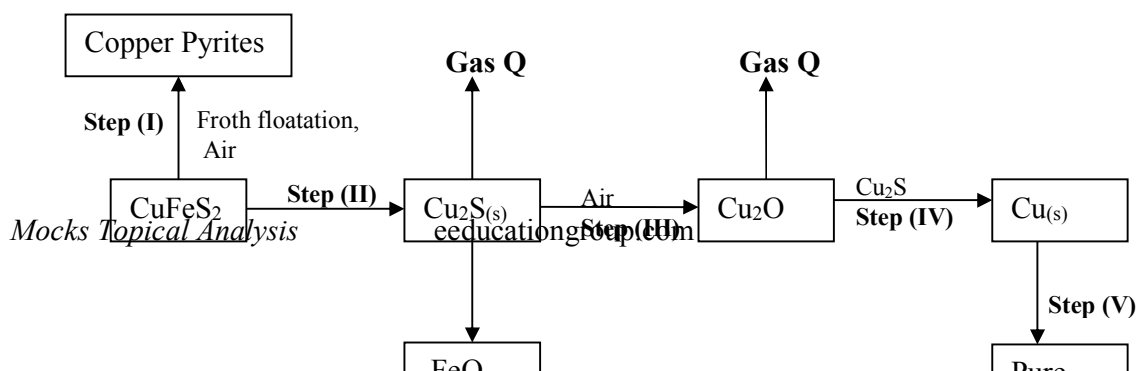

- Why is the anode made of graphite in this case instead of steel which is a better conductor of electricity?
  - How are the electrolytic products separated from reacting?
  - Give reasons why large quantities of electricity is required for this process
- Give **one** environmental hazard associated with the extraction of zinc metal
    - Suggest **one** manufacturing plant that can be set up near zinc extraction plant. Give reasons for your answer
    - What properties of aluminium and its alloys make it suitable for use in making aircraft parts
  - Aluminium is used in making overhead cables. State **two** properties of aluminium that makes it suitable for this use
  - The stages shown in the following diagram can be used to extract zinc from its oxide:- Name the stage and the process taking place in it:-

Name each stage and the process taking place in it:

Stage 1.....  
 Stage 2.....  
 Stage 3.....

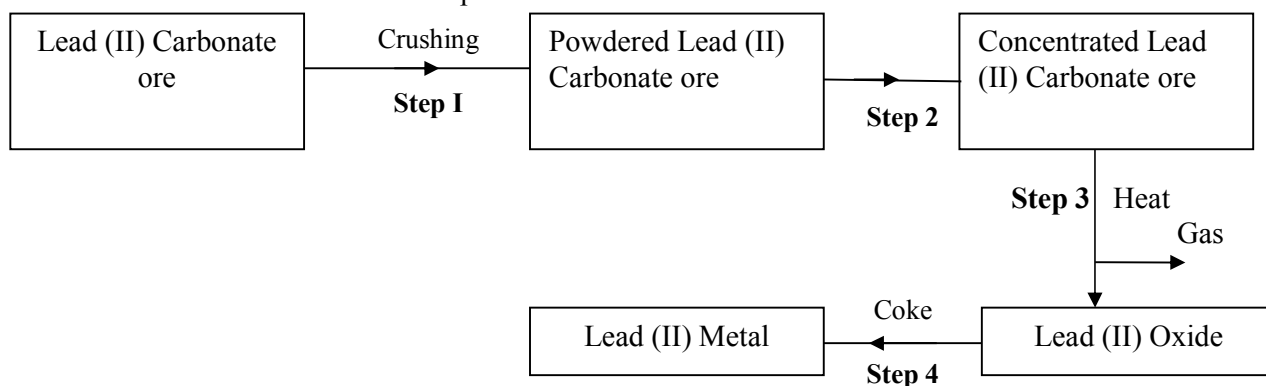

5. Study the flow chart below and answer the questions that follow:

- (a) Name gas **Q** .....
- (b) With the help of diagram, describe how step (V) is carried out
6. Name the following compounds using IUPAC system
- (i)  $\text{CCl}_4$
- (ii)  $\text{HOCl}$
7. Study the information provided:-

Element	Atomic radius (nm)	Ionic radius (nm)	Melting point of oxide ( $^{\circ}\text{C}$ )
W	0.381	0.418	-117
Y	0.733	0.669	849
Z	0.544	0.489	1399

- (a) Explain why the melting point of the oxide of **W** is lower than that of the oxide of **Z**
8. The flow chart below shows steps used in the extraction of zinc from one of its ores.

- (a) Name the process that is used in **step 2** to concentrate the ore
- (b) Write an equation for the reaction which takes place in **step 3**
- (c) Name **one** use of lead
9. Name the chief ores from which the following metals are extracted
- a) Aluminium .....
- b) Copper .....
10. The diagram below represents the second stage in extraction of aluminium metal

- i) On the diagram label the: Anode, cathode and the electrolyte region (s)
- ii) The melting point of aluminium oxide is  $2054^{\circ}\text{C}$ , but the electrolysis is carried out at between  $800-900^{\circ}\text{C}$
- Why is the electrolysis not carried out at  $2054^{\circ}\text{C}$
  - What is done to lower the temperature?
- iii) The aluminium which is produced is tapped off as a liquid. What does this suggest about its melting points?
11. The extraction of aluminium from its ore takes place in 2 stages. Purification stage and electrolysis stage. Below is set-up for the electrolysis stage:-

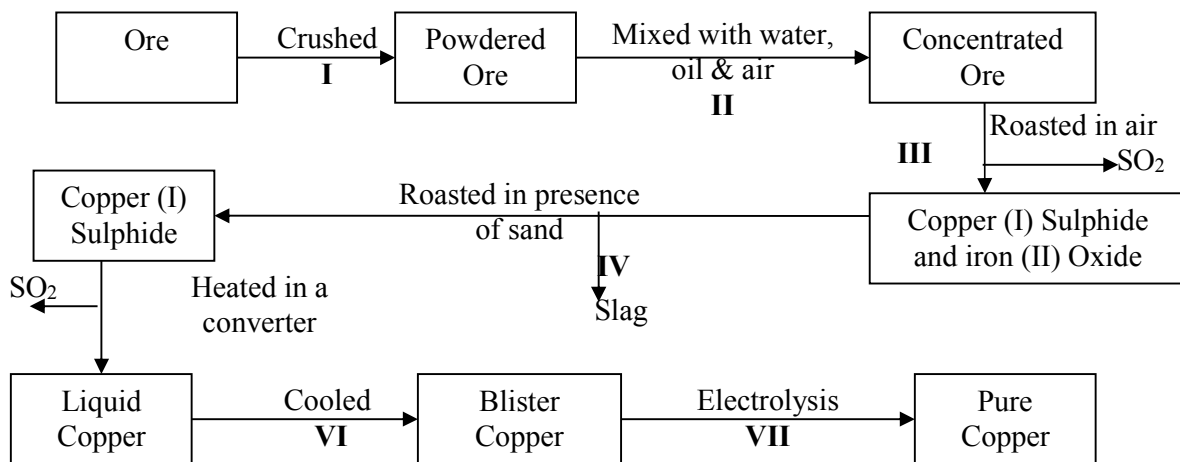

- (i) Name the chief ore from which aluminium is extracted
  - (ii) Name **one** impurity which is removed at the purification stage
- (b) (i) Label on the diagram each of the following:-
- Anode
  - Cathode
  - Region containing electrolyte
- (ii) The melting point of aluminium oxide is  $2054^{\circ}\text{C}$  but the electrolysis is carried out at between  $80^{\circ}\text{C}$  and  $900^{\circ}\text{C}$
- Why is not carried out at  $2050^{\circ}\text{C}$
  - What is done to lower the temperature
12. Aluminium is the most abundant metal in the earth crust and it is widely extracted for its wide range of uses.
- Name **one** major ore of aluminium and give its formula
  - Name **two** main impurities found in the ore
  - Aluminium oxide is heated first before it is electrolysed. Explain
  - Electrolysis of aluminium oxide is done as shown below:

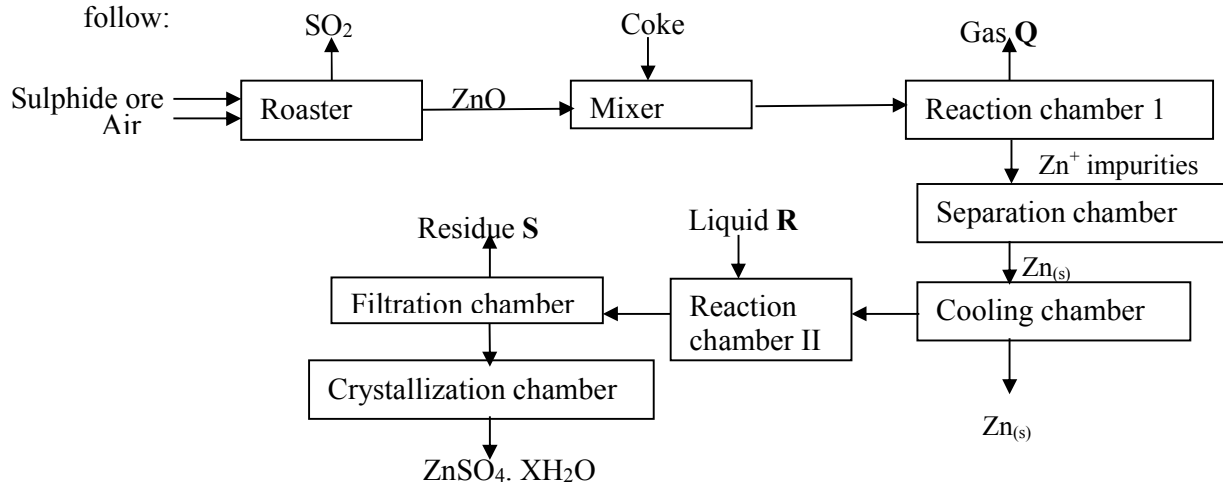

- (a) Identify the anode and cathode on the diagram  
 (b) What is the role of electrolyte in the extraction ?  
 (c) Write half equations for the reactions that occur at the anode and cathode  
 (d) State **two** uses of aluminium
13. The diagram below is a flow chart for the extraction of copper. Study it and answer the questions that follow:

- (a) Write the formula of the major ore of copper metal  
 (b) Name **process II**  
 (c) Give an equation for the reaction that occurs in **stage III**  
 (d) Explain what happens in stage IV  
 (e) Write half cell equations occurring at the anode and cathode in **stage VII**  
 (f) Draw a simple diagram showing the set-up that is used in electrolytic purification of copper  
 (g) A green rocky materials suspected to be the ore malachite  $\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$ .
14. The flow chart below illustrates the extraction of Zinc. Study it and answer the questions that follow:

- a) Name:-  
 i) Gas **Q** .....  
 ii) Liquid **R** .....  
 (iii) Residues **S** .....
- b) Name the sulphide ore used  
 c) Before the ore is roasted, it is first concentrated;  
 (i) Explain why it is necessary to concentrate the ore  
 (ii) Explain briefly the process of concentrating the ore  
 d) Write an equation for the reaction that takes place in the:-  
 (i) Roaster

(ii) Reaction chamber

(e) (i) Name **one** major impurity present in the sulphide ore used

(ii) Write an equation to show how the impurity in (e)(i) above is removed

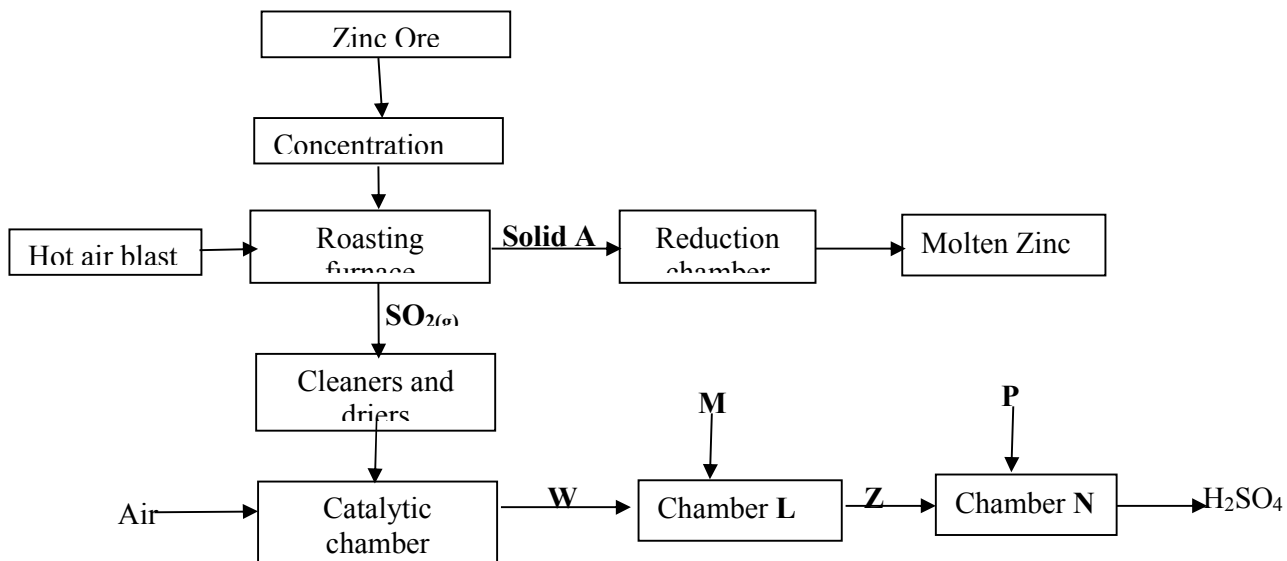

f) Given that the sulphide ore contains only 45% Zinc sulphide by mass, calculate :

(i) The mass in grams of Zinc sulphide that would be obtained from 250kg of the ore.

(ii) The volume of Sulphur (IV) oxide that would be obtained from the mass of sulphide ore at room temperature and pressure

(Zn = 65.4, S = 32.0, O = 16.0, 1 mole of gas occupies 24.0 liters at r.t.p)

15. The flow chart below represents the extraction of zinc from its ore and a by-product used in the manufacture of sulphuric (VI) acid. Study it and use it to answer the questions that follow:-

a) Name;

i) The suitable zinc ore used.

ii) The main impurity in the ore

b) Describe how zinc ore is concentrated

c) Write an equation for the reaction taking place in the roasting furnace

d) Describe what happens in the reduction chamber

e) Identify substances:-

W.....(½mk) M..... (½mk)

f) Write the equation for the reaction that occurs in chamber N.

g) Explain why sulphur (VI) oxide is not dissolved directly in water

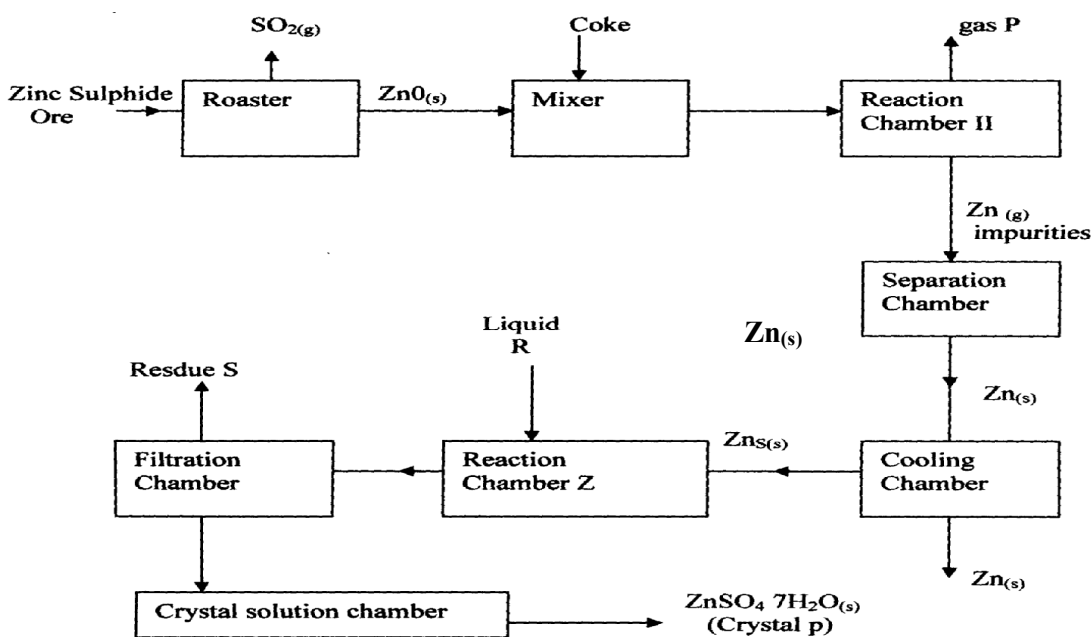

h) Explain the danger caused by this process to the environment

(2 marks)

16. The diagram below is for extraction of Aluminium from its ore. It takes place in stages. Use it to answer the questions that follow:-

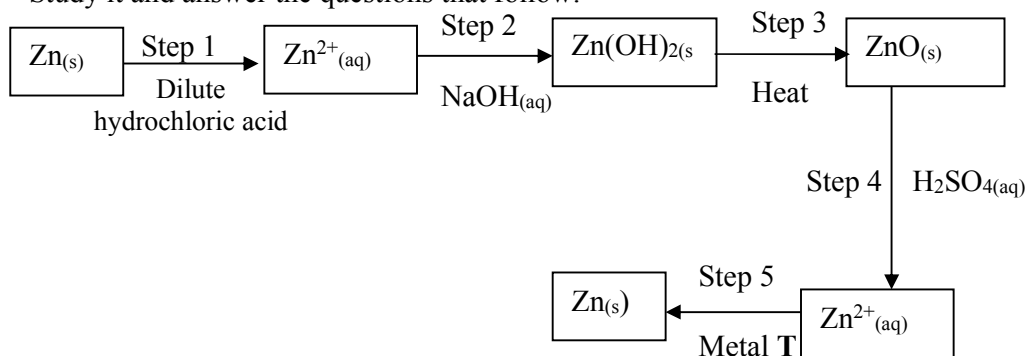

- (a) Name the **two** stages mentioned above \*
- (b) Name:-
- (i) The ore from which Aluminium is extracted \*
- (ii) The impurities removed during the extraction of Aluminium \*
- (c) On the diagram label:-
- (i) The electrodes \*
- (ii) The region containing the electrolyte \*
- (d) Molten cryolite is added to Aluminium Oxide during extraction. Explain \*
17. A current of 3A was passed through fused aluminium oxide for 10minutes. Calculate the mass of Aluminium obtained at one electrode (Al = 27.0, IF = 96500C) \*
18. (a) Name **one** ore that can be used to commercially extract Zinc metal
- (b) The flow chart below illustrates the extraction of zinc and preparation of zinc sulphate crystals.

- (i) Name :
- (I) Gas **P** .....
- (II) Liquid **R** .....
- (III) Residue **S** .....
- (ii) What is the role of coke in the above process?
- (iii) Name the main impurity removed in the separation chamber
- (iv) Write an equation for the reaction that takes place in ;
- (1). Roaster
- (11). Reaction chamber II
- (v) Write an equation for the reaction that takes place between Zinc metal and liquid **R**
- (vi) Given that zinc Sulphide ore contains only 45% of zinc Sulphide by mass, calculate the mass in grams of zinc Sulphide that would be obtained from 250kg of the ore .
- (vii) Give **one** commercial use of Zinc metal

19. The flow chart below shows a sequence of chemical reactions starting with Zinc. Study it and answer the questions that follow:-

- a) In step 1, excess 3M hydrochloric acid was added to 0.5g of Zinc powder
- State **two** observations which were made when the reaction was in progress
  - Explain why hydrogen gas is not liberated when dilute nitric acid is used in step 1
  - Write the equation for the reaction that took place in **step 1**
- b) Calculate the volume of 3M hydrochloric acid that was needed to react completely with 0.5g of Zinc powder ( $Zn = 65.0$ )
20. The diagram below is a simplified apparatus for extraction of sodium. Study it and answer the equations that follow:-

- Which substances come out at:- **P & Q**
  - What is the role of the diaphragm
  - Write the equation of the reaction forming sodium
21. The set-up below was used to investigate electrolysis of a certain molten compound:-

- Complete the circuit by drawing the cell in the gap left in the diagram
- Write half-cell equation to show what happens at the cathode
- Using an arrow show the direction of electron flow in the diagram above

22. (a) Name **two** ores from which Zinc metal is mostly extracted  
 (b) One of the steps in the extraction of Zinc metal from its ore is roasting of the ore in excess oxygen. Write equations for the reactions that take place when the ore in (a) above is roasted
23. Aluminum metal is mainly extruded from molten Bauxite by electrolysis.  
 a) Name the main impurity in this ore.  
 b) Briefly describe how the impurity is removed from the ore before electrolysis process. (2 mks)
24. (a) In the extraction of aluminium from its ore by the use of electrolysis, explain the following observations:-  
 (i) the graphite anode is replaced from time to time  
 (ii) the steel tank which can also serve as an electrode is also lined with graphite cathode  
 (b) Sodium and aluminium metals both conduct electricity, but aluminium is a better conductor of electricity than sodium. Explain

## Organic chemistry II (alkanoic acids and alkanols)

1. A student mixed equal volumes of Ethanol and butanoic acid. He added a few drops of concentrated Sulphuric (VI) acid and warmed the mixture  
 (i) Name and write the formula of the main products  
 Name.....  
 Formula.....  
 (ii) Which homologous series does the product named in (i) above belong?

2. The structure of the monomer phenyl ethene is given below:-

- a) Give the structure of the polymer formed when four of the monomers are added together  
 b) Give the name of the polymer formed in (a) above
3. Explain the environmental effects of burning plastics in air as a disposal method
4. Write chemical equation to represent the effect of heat on ammonium carbonate
5. Sodium octadecanoate has a chemical formula  $\text{CH}_3(\text{CH}_2)_{16}\text{COO}^-\text{Na}^+$ , which is used as soap. Explain why a lot of soap is needed when washing with hard water
6. A natural polymer is made up of the monomer:

- (a) Write the structural formula of the repeat unit of the polymer  
 (b) When  $5.0 \times 10^{-5}$  moles of the polymer were hydrolysed, 0.515g of the monomer were obtained.  
 Determine the number of the monomer molecules in this polymer.  
 (C = 12; H = 1; N = 14; O = 16)
7. The formula below represents active ingredients of two cleansing agents **A** and **B**

Agent A

Agent B

Which one of the cleansing agents would be suitable to be used in water containing magnesium hydrogen carbonate? Explain

8. Study the polymer below and use it to answer the questions that follow:

- (a) Give the name of the monomer and draw its structures  
 (b) Identify the type of polymerization that takes place  
 (c) State **one** advantage of synthetic polymers
9. Ethanol and Pentane are miscible liquids. Explain how water can be used to separate a mixture of ethanol and pentane

- (a) What is absolute ethanol?  
 (b) State **two** conditions required for process **G** to take place efficiently
11. (a) (i) The table below shows the volume of oxygen obtained per unit time when hydrogen peroxide was decomposed in the presence of manganese (IV) Oxide. Use it to answer the questions that follow:-

Time in seconds	Volume of Oxygen evolved (cm <sup>3</sup> )
0	0
30	10
60	19
90	27
120	34
150	38
180	43
210	45
240	45
270	45
300	45

- (i) Plot a graph of volume of oxygen gas against time  
 (ii) Determine the rate of reaction at time 156 seconds  
 (iii) From the graph, find the time taken for 18cm<sup>3</sup> of oxygen to be produced  
 (iv) Write a chemical equation to show how hydrogen peroxide decomposes in the presence of manganese (IV) Oxide
- (b) The diagram below shows how a Le'clanche (Dry cell) appears:-

- (i) What is the function of  $\text{MnO}_2$  in the cell above?  
 (ii) Write the equation of a reaction that occurs at the cathode  
 (iii) Calculate the mass of Zinc that is consumed when a current of 0.1 amperes flows through the above cell for 30 minutes ( $1F = 96500\text{C}$ ,  $Zn = 65$ )

12. (a) Give the IUPAC names of the following compounds:

(b) The structure below shows some reactions starting with ethanol. Study it and answer the questions that follow:

(i) Write the formula of the organic compounds **P** and **S** \*

(ii) Name the type of reaction, the reagent(s) and condition for the reactions in the following

steps :-

(I) Step I \*

(II) Step II \*

(III) Step III \*

(iii) Name reagent **R** .....

(iv) Draw the structural formula of **T** and give its name \*

(v) (I) Name compound **U**.....

(II) If the relative molecular mass of **U** is 42000, determine the value of  $n$  ( $\text{C}=12$ ,  $\text{H}=1$ ) \*

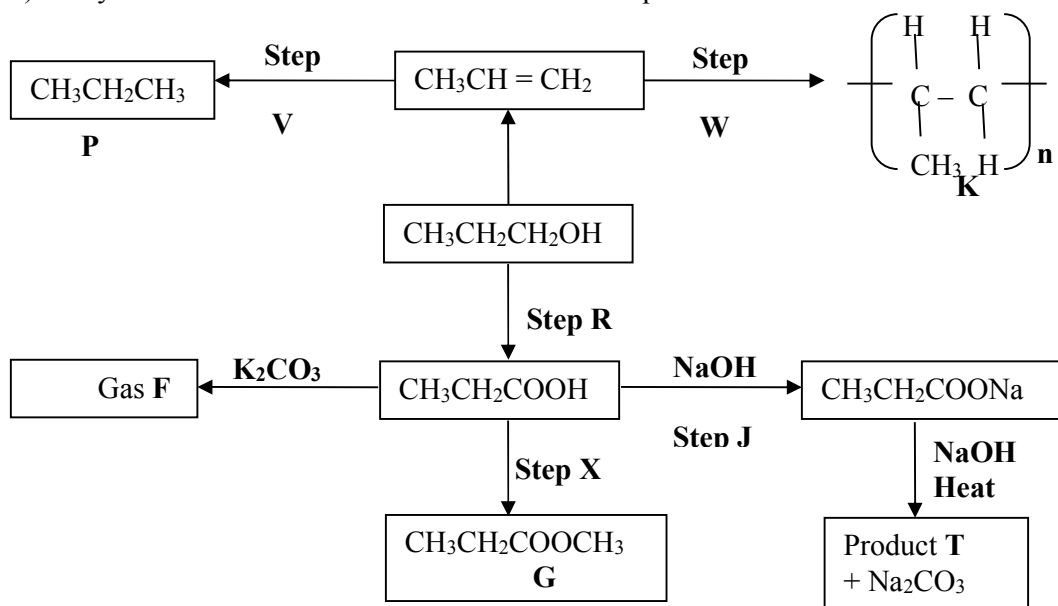

(c) State why  $\text{C}_2\text{H}_4$  burns with a more smoky flame than  $\text{C}_2\text{H}_6$  \*

13. a) State **two** factors that affect the properties of a polymer

b) Name the compound with the formula below :

c) Study the scheme below and use it to answer the questions that follow:-

i) Name the following compounds:-

I. Product T ..... II. K .....

ii) State **one** common physical property of substance G

iii) State the type of reaction that occurred in step J

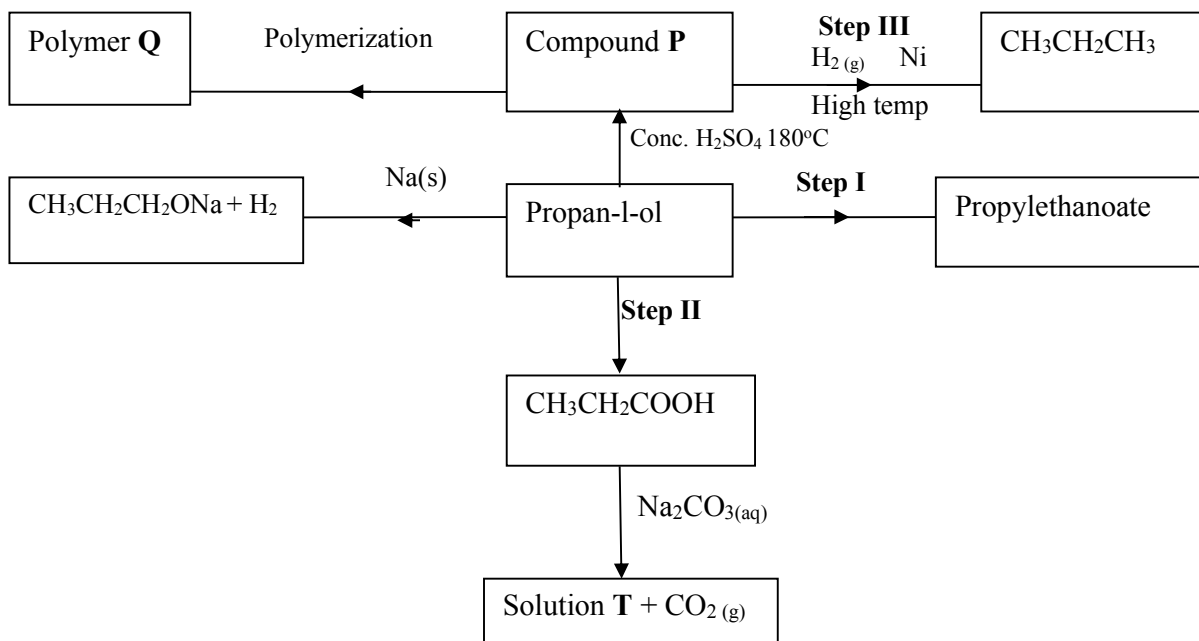

iv) Give **one** use of substance K

v) Write an equation for the combustion of compound P

vi) Explain how compounds  $\text{CH}_3\text{CH}_2\text{COOH}$  and  $\text{CH}_3\text{CH}_2\text{CH}_2\text{OH}$  can be distinguished chemically

vii) If a polymer K has relative molecular mass of 12,600, calculate the value of n (H=1 C=12)

14. Study the scheme given below and answer the questions that follow:-

(a) (i) Name compound P .....

(ii) Write an equation for the reaction between  $\text{CH}_3\text{CH}_2\text{COOH}$  and  $\text{Na}_2\text{CO}_3$

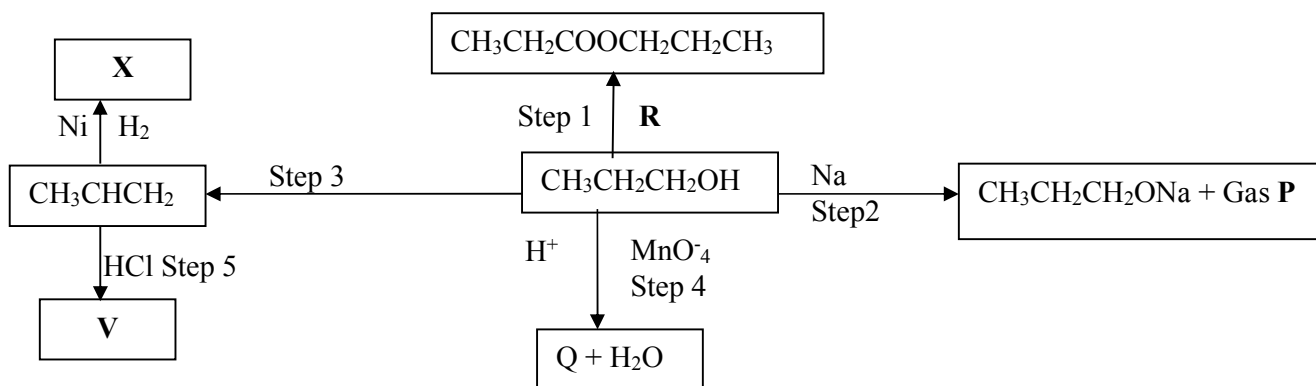

(b) State **one** use of polymer Q

(c) Name **one** oxidising agent that can be used in step II .....

(d) A sample of polymer Q is found to have a molecular mass of 4200. Determine the number of monomers in the polymer (H = 1, C = 12)

- (e) Name the type of reaction in **step I** .....
- (f) State **one** industrial application of **step III** .....
- (g) State how burning can be used to distinguish between propane and propyne. Explain your answer .....
- (h) 1000cm<sup>3</sup> of ethene (C<sub>2</sub>H<sub>4</sub>) burnt in oxygen to produce Carbon (II) Oxide and water vapour. Calculate the minimum volume of air needed for the complete combustion of ethene (Air contains 20% by volume of oxygen)
15. (a) Study the schematic diagram below and answer the questions that follow:-

- (i) Identify the following:  
 Substance **Q** .....
- Substance **R** .....
- Gas **P** .....
- (ii) Name:  
**Step 1** .....
- Step 4** .....
- (iii) Draw the structural formula of the major product of step 5
- (iv) State the condition and reagent in step 3
16. Study the flow chart below and answer the questions that follow

- (a) (i) Name the following organic compounds:  
**M** .....
- L** .....
- (ii) Name the process in step:  
**Step 2** .....
- Step 4** .....
- (iii) Identify the reagent **P** and **Q**
- (iv) Write an equation for the reaction between  $\text{CH}_3\text{CH}_2\text{CH}_2\text{OH}$  and sodium
17. a) Give the names of the following compounds:  
 i)  $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{OH}$  .....
- ii)  $\text{CH}_3\text{CH}_2\text{COOH}$  .....
- iii)  $\text{CH}_3\text{C} - \text{O} - \text{CH}_2\text{CH}_3$  .....

18. Study the scheme given below and answer the questions that follow;

- i) Name the reagents used in:
- Step I: .....
- Step II: .....
- Step III: .....
- ii) Write an equation to show products formed for the complete combustion of  $\text{CH} = \text{CH}$
- iii) Explain **one** disadvantage of continued use of items made from the compound formed in step III
19. A hydrated salt has the following composition by mass. Iron 20.2 %, oxygen 23.0%, sulphur 11.5%, water 45.3%
- i) Determine the formula of the hydrated salt ( $\text{Fe}=56$ ,  $\text{S}=32$ ,  $\text{O}=16$ ,  $\text{H}=11$ )
- ii) 6.95g of the hydrated salt in **c(i)** above were dissolved in distilled water and the total volume made to  $250\text{cm}^3$  of solution. Calculate the concentration of the resulting salt solution in moles per litre. (Given that the molecular mass of the salt is 278)
20. Write an equation to show products formed for the complete combustion of  $\text{CH} = \text{CH}$
- iii) Explain **one** disadvantage of continued use of items made from the compound formed in step III
21. Give the IUPAC name for each of the following organic compounds;
- i)  $\text{CH}_3 - \underset{\text{OH}}{\text{CH}} - \text{CH}_2 - \text{CH}_3$
- ii)  $\text{CH}_3 - \underset{\text{C}_2\text{H}_5}{\text{CH}} - \text{CH}_2 - \text{CH}_2 - \text{CH}_3$
- iii)  $\text{CH}_3\text{COOCH}_2\text{CH}_2\text{CH}_3$

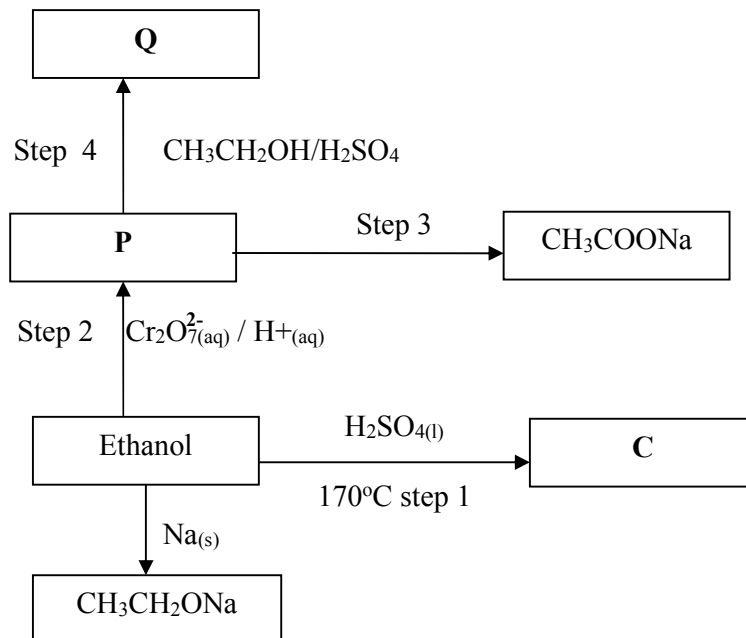

22. The structure below represents a cleansing agent.

- a) State the type of cleansing agent represented above
- b) State **one** advantage and one disadvantage of using the above cleansing agent.
23. The structure below shows part of polymer. Use it to answer the questions that follow.
- $$\begin{array}{c} \text{CH}_3 \quad \quad \text{CH}_3 \quad \quad \text{CH}_3 \\ | \quad \quad | \quad \quad | \\ \text{--- CH} - \text{CH}_2 - \text{CH} - \text{CH}_2 - \text{CH} - \text{CH}_2 \text{---} \end{array}$$
- a) Derive the structure of the monomer
- b) Name the type of polymerization represented above
24. The flow chart below represents a series of reactions starting with ethanoic acid:-

- (a) Identify substances **A** and **B**  
 (b) Name the process **I**
25. a) Write an equation showing how ammonium nitrate may be prepared starting with ammonia gas  
 (b) Calculate the maximum mass of ammonium nitrate that can be prepared using 5.3kg of ammonia (H=1, N=14, O=16)
26. (a) What is meant by the term, esterification?  
 (b) Draw the structural formulae of **two** compounds that may be reacted to form ethylpropanoate
27. (a) Draw the structure of pentanoic acid  
 (b) Draw the structure and give the name of the organic compound formed when ethanol reacts with pentanoic acid in presence of concentrated sulphuric acid
28. The scheme below shows some reactions starting with ethanol. Study it and answer the questions that follow:-

- (i) Name and draw the structure of substance **Q**  
 (ii) Give the names of the reactions that take place in **steps 2 and 4**  
 (iii) What reagent is necessary for reaction that takes place in step 3
29. Substances **A** and **B** are represented by the formulae **ROH** and **RCOOH** respectively. They belong to two different homologous series of organic compounds. If both A and B react with potassium metal:
- (a) Name the common product produced by both  
 (b) State the observation made when each of the samples **A** and **B** are reacted with sodium hydrogen carbonate
- (i) **A**  
 (ii) **B**

30. Below are structures of particles. Use it to answer questions that follow. In each case only electrons in the outermost energy level are shown

**key**

P = Proton

N = Neutron

X = Electron

- (a) Identify the particle which is an anion
31. Plastics and rubber are extensively used to cover electrical wires.  
 (a) What term is used to describe plastic and rubbers used in this way?  
 (b) Explain why plastics and rubbers are used this way
32. The scheme below represents the manufacture of a cleaning agent X

- (a) Draw the structure of X and state the type of cleaning agent to which X belong  
 (b) State **one** disadvantage of using X as a cleaning agent
33. Y grams of a radioactive isotope take 120days to decay to 3.5grams. The half-life period of the isotope is 20days  
 (a) Find the initial mass of the isotope  
 (b) Give **one** application of radioactivity in agriculture
34. The structure below represents a polymer. Study and answer the questions that follow:-

- (i) Name the polymer above.....  
 (ii) Determine the value of n if giant molecule had relative molecular mass of 4956
35.  $\text{RCOO}^-\text{Na}^+$  and  $\text{RCH}_2\text{OSO}_3^-\text{Na}^+$  are two types of cleansing agents;  
 i) Name the class of cleansing agents to which each belongs  
 ii) Which one of these agents in (i) above would be more suitable when washing with water from the Indian ocean. Explain  
 iii) Both sulphur (IV) oxide and chlorine are used bleaching agents. Explain the difference in their bleaching properties

36. The formula given below represents a portion of a polymer

- (a) Give the name of the polymer  
 (b) Draw the structure of the monomer used to manufacture the polymer

## Radioactivity

1. Complete the following equation by determining the values of U and V.

U.....

V.....

2. (a) Distinguish between nuclear fusion and fission  
 (b) Complete the nuclear equation below:-

3. Uranium -238 disintegrates by emitting an alpha particle to form substance Y.  
 Nuclide Y emits a beta particle to form substance Z. Write down nuclear equations to show how substance Y and Z are formed (U=At No. 92)
4. (a) What is a nuclide?  
 (b) The graph below shows the radioactive decay of a certain nuclide. Determine the half-life of the nuclide

- (e) What effect do excess exposures of radiation have on metals?

5. (a) State **one** way in which nuclear reactions differ from ordinary chemical reactions  
 (b) The following is a part of Uranium decay series

- (i) Which particles are emitted in **step I** and **II**  
 (ii) If a beta particle is emitted in **step III**, find **Z** and **A**  
 (iii) If the activity of Thorium -234 is reduced to 25% in 48hours, find its half life
6. Substances **A** and **B** are represented by the formulae **ROH** and **RCOOH** respectively. They belong to two different homologous series of organic compounds. If both A and B react with potassium metal:
- (a) Name the common product produced by both  
 (b) State the observation made when each of the samples **A** and **B** are reacted with sodium hydrogen carbonate
- (i) **A**  
 (ii) **B**

7. Some **two** elements are represented as:

- (a) How many protons does **X** have?  
 (b) How many neutrons does **Y** have?  
 (c) Draw the structure of the compound formed between **X** and **Y**
8. **Y** grams of a radioactive isotope take 120days to decay to 3.5grams. The half-life period of the isotope is 20days
- (a) Find the initial mass of the isotope  
 (b) Give **one** application of radioactivity in agriculture

9. Study the nuclear reactions given and answer the questions that follow:

- (a) Write an equation for the nuclear reaction in step II (1mk)  
 (b) Give **one** use of **Y** (1mk)
10. Give **two** uses of radioactive isotopes in medicine.
11. Study the information in the following table and answer the questions that follow. The letters do not represent the actual chemical symbols of the elements.

ELEMENT	U	V	W	X	Y	Z
NUMBER OF PROTONS	18	20	6	16	19	17
NUMBER OF NEUTRONS	22	20	8	16	20	20

Which of the above elements are:

- (i) Likely to be radioactive?  
 (ii) Able to form a compound with the highest ionic character?
12. The isotope  ${}^{24}_{11}$  decays by Beta,  $\beta$  -emission to a stable nuclide. The half-life of the isotope is 15hours. 2.0g of  ${}^{24}_{11}$  is allowed to decay. Determine the mass of left after 90hours
13. (a) Complete the following nuclear equation

- (b) 100g of a radioactive substance was reduced to 12.5g within 15.6 years. Determine the half-life of the substance

## SECTION III PRATICALS

### KAKAMEGA CENTRAL DISTRICT

#### CONFIDENTIAL

#### ACCESS TO:-

- *1M NaOH*
- *1M NH<sub>4</sub>OH*
- *1M HCL*
- *0.01m PB (NO<sub>3</sub>)<sub>2</sub>*
- *Source of heat*
- *pH chart (PH=1 to 14)*
- *10ml of solution K*
- *Sodium hydrogen carbonate*

#### PREPARATION OF SOLUTIONS:

##### *1. Solution J*

*Dissolve 17g of ammonium iron (II) sulphate in 50cm<sup>3</sup> of 2M H<sub>2</sub>SO<sub>4</sub> dilute to 1dm<sup>3</sup>*

##### *2. Solution K KMnO<sub>4</sub>*

*Dissolve 1.6g of potassium manganate vii in 20cm<sup>3</sup> of 2 MH<sub>2</sub>SO<sub>4</sub> dilute to 1dm<sup>3</sup>*

##### *3. Solution R*

*Dissolve 40g of sodium thiosulphate in 1dm<sup>3</sup> of solution*

##### *4. Solution S*

*Dissolve 172cm<sup>3</sup> of concentrated hydrochloric acid in 1dm<sup>3</sup> of solution*

##### *5. Solid Y is aluminium sulphate*

##### *6. Solid Z is oxalic acid.*

*Each candidate will require:*

*Q1.*

- 1. Solution J - 100cm<sup>3</sup>*
- 2. Burette*
- 3. Solution K- 100cm<sup>3</sup>*
- 4. Pipette*
- 5. 2 conical flasks*
- 6. Filter funnel*
- 7. Retort stand*

#### **1. You are provided with:**

Solution J: xM ammonium iron(II)sulphate solution

Solution **K**: **0.02M** potassium manganate (VII)solution

**You are required to determine:**

- The molarity, x of the ammonium iron (II) sulphate
- The amount of water of crystallisation, N in ammonium iron (II) sulphate
- The formula mass of ammonium iron (II)sulphate.

#### **Procedure**

The ammonium iron (II) sulphate, (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>FeSO<sub>4</sub>nH<sub>2</sub>O solution provided was made by dissolving 8.5g of the salt in 50.0cm<sup>3</sup> of dilute sulphuric(VI)acid, then making the solution to 250cm<sup>3</sup> using distilled water.

Fill the burette with solution **K**. Pipette 25cm<sup>3</sup> of solution **J** and release into a conical flask. Titrate **J** against **K** until the solution becomes permanent pink. Repeat two more times and complete the table below;-

**Table 1**

	I	II	III
Final burette reading (cm <sup>3</sup> )			
Final burette reading (cm <sup>3</sup> )			
Volume of Solution <b>K</b> used (cm <sup>3</sup> )			

a) Calculate the average volume of solution **K** used

b) The number of moles of solution **K** reacting

c) Given that equation for the reaction is:

**Determine:**

i) The number of moles of iron (II) salt solution **J** in 25cm<sup>3</sup> of the solution used

ii) The molarity of solution **J**

iii) The concentration of solution **J** in grams per litre

d) From your results in **C** (iii) above, determine:

i) the value of “**n**” in the formula (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>FeSO<sub>4</sub>**n**H<sub>2</sub>O.

(N=14, H= 1, S=32, O=16, Fe=56)

ii) Correct formula of the iron (II) salt

iii) The formula mass of the iron (II) salt

## Q2.

- 120cm<sup>3</sup> of solution **R**
- 80cm<sup>3</sup> of solutions
- 250cm<sup>3</sup> of tap water
- 25ml or 50ml measuring cylinder
- 100cm<sup>3</sup> glass beaker
- 5 x 5cm piece of white paper
- Stop watch or clock.

## 2. *You are provided with:*

i) Sodium thiosulphate containing 40g/dm<sup>3</sup> solution **R**

ii) 2M hydrochloric acid solution **S**

You are to determine the rate of reaction between solution **S** and the thiosulphate

### *Procedure:*

Measure 20cm<sup>3</sup> of solution **R** into an empty 100cm<sup>3</sup> breaker. Place it on a mark ‘**X**’ on a white plain paper. Measure another 20cm<sup>3</sup> of solution **S**. add into **R** and start off the stop watch. Then record the time taken for the mark ‘**X**’ to become invisible from above. Repeat the procedure by measuring 17.5cm<sup>3</sup> of solution **S** and adding 2.5cm<sup>3</sup> of water and complete the table;-

**Table 2**

Experiment	1	2	3	4	5
Volume of solution <b>R</b> cm <sup>3</sup>	20	20	20	20	20
Volume of solution <b>S</b> cm <sup>3</sup>	20	17.5	15	12.5	10
Volume of water (cm <sup>3</sup> )	0	2.5	5.0	7.5	10
Time taken for <b>x</b> to become invisible(seconds)					
1/time (Sec <sup>-1</sup> )					

a) Draw a graph of reciprocal time (<sup>1/t</sup>) against volume of solution **S**

b) Explain the shape of the graph

c) From the graph determine the time taken for the cross ‘**X**’ to be invisible at 16.5cm<sup>3</sup> of solution **S**

## Q3.

- Solid **Y**-1spatulaful
- Solid **Z**-1spatulaful
- 6 test tubes

4. 1 red + 1 blue litmus papers
  5. Metallic spatula
  6. pH paper
3. You are provided with solid **Y** and **Z** to carry out the tests below. Write your observations and inferences in the spaces provided:-
- a) i) Place all solid **Y** in a clean test tube. Add 10cm<sup>3</sup> of distilled water and shake.  
Divide the solution in **a (i)** above into 4 portions
    - ii) To the first portion add sodium hydroxide dropwise until in excess
    - iii) To the second portion add aqueous ammonia dropwise until in excess
    - iv) To the third portion add 5 drops of dilute hydrochloric acid
    - v) To the fourth portion add 3 drops of lead (II) nitrate solution
  - b) i) Scoop a little solid **Z** on a metallic spatula and heat it over a bunsen flame
    - ii) Add all the remaining solid to 10cm<sup>3</sup> of distilled water in a test tube and shake.  
Divide the solution into 3 portions
      - iii) to the first portion dip a pH indicator paper
      - iv) to the second portion add 3 drops of acidified potassium permanganate warm gently **KKC\***
      - v) to the third portion add ½ spatula full of sodium hydrogen carbonate

### KAKAMEGA EAST DISTRICT

#### CONFIDENTIAL

#### INSTRUCTIONS

*Each candidate should be provided with the following:-*

1. Burette
2. Pipette
3. Two conical flasks
4. Funnel
5. Phenolphthalein indicator
6. Methyl orange indicator
7. Universal indicator
8. Solution a 100cm<sup>3</sup>
9. Solution b 100cm<sup>3</sup>
10. Solution c 100cm<sup>3</sup>
11. Distilled water in wash bottle
12. 0.2m CuSO<sub>4</sub> (solution Y)
13. 0.7g zinc powder (solid Z)
14. Thermometer
15. 100ml plastic beaker
16. Stop watch or wrist watch
17. Tissue paper ½ metre
18. 6 test tubes
19. One boiling tube
20. Solid P
21. Solid Q
22. Filter paper
23. Means of heating
24. 2m NaOH
25. 2m H<sub>2</sub>SO<sub>4</sub>
26. 0.1m BaCl<sub>2</sub>
27. 0.1m Pb(NO<sub>3</sub>)<sub>2</sub>
28. 2m HCl

29. 2m  $\text{NH}_3(\text{aq})$

30. *Metallic spatula*

31. 0.5g  $\text{NaHCO}_3$

Notes on preparation of solutions :-

- *Solution A* 0.05M sodium Carbonate
- *Solution B* = 0.1M of HCl
- *Solution C* = 0.16g KOH + 1.94g KCl in 250cm<sup>3</sup> solution
- *Solid P* =  $\text{CaCl}_2$  and  $\text{MgCO}_3$
- *Solid Q* = Carboxylic acid (oxalic)

1. **You are provided with:-**

- Solution **A** containing 0.05 moles in 1dm<sup>3</sup> of solution of anhydrous Sodium Carbonate
- Solution **B**, monobasic acid, HX
- Solution **C**, 2.1g of a mixture of potassium hydroxide (KOH) and potassium chloride (KCl) dissolved in distilled water and made up to 250cm<sup>3</sup> solution.

**You are required to:**

- Standardise the monobasic acid, solution **B**
- Determine the percentage of potassium chloride (KCl) in the mixture.

**Procedure:**

Fill the burette with solution **B**. Pipette 25.0cm<sup>3</sup> of solution **A** into a clean dry conical flask and titrate with solution **B** using methyl orange indicator. Record your results in table 1 below:-

	1	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution <b>B</b> used (cm <sup>3</sup> )			

- Calculate the average volume of solution **B** used
- Given that the equation for the reaction taking place is:-  
 $\text{Na}_2\text{CO}_3(\text{aq}) + 2\text{HX}(\text{aq}) \longrightarrow 2\text{NaX}(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$   
Calculate the concentration of solution **B** in moles per litre

**Procedure II**

Fill the burette to the 0.0mark with solution **B**. Pipette 25.0cm<sup>3</sup> of solution **C** into a clean dry conical flask and titrate it against solution **B** using phenolphthalein indicator. Repeat the titration and fill table II below:-

**Table II**

	1	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution <b>B</b> used (cm <sup>3</sup> )			

- What is the average volume of solution **B** used?
  - Calculate the concentration of solution **C** in :-
    - Moles per litre
    - Grams per litre (K=39, O=16, H=1)
  - Calculate the percentage of potassium chloride in the mixture
2. **You are provided with:-**
- Solution **Y** containing 0.2moles of copper (II) sulphate per litre of solution
  - Solid **Z**

**You are required to:**

Determine the heat evolved when 1 mole of solid **Y** reacts with solid **Z**

**Procedure**

- Measure 40cm<sup>3</sup> of solution **Y** and place it into an insulated 100cm<sup>3</sup> plastic beaker
- Stir the solution with the help of thermometer and record its temperature after every ½ minute for 1½ minutes.
- After exactly 2 minutes, add all the solid **Z** provided and continue stirring the mixture while recording the temperature of solution and complete the table below:

Time (minutes)	½	1	1½	2	2½	3	3½	4	4½	5	5½	6	6½	7
Temperature (°C)				X										

- (b) (i) On the graph paper provided, plot a graph of temperature against time  
(ii) From your graph, determine the maximum temperature change
- (c) Given that the density of the solution is 1g/cm<sup>3</sup>, determine the quantity of heat evolved when 40cm<sup>3</sup> of solution **Y** is reacted completely with solid **Z** (specific heat capacity of solution = 4.2Jg<sup>-1</sup>k<sup>-1</sup>)
- (d) (i) Given that solid **Z** is Zinc powder, write an ionic equation of the reaction which occurs  
(ii) Determine the moles of copper ions used up in the reaction  
(iii) Determine the amount of heat that would be evolved if one mole of Copper (II) ions were used up  
(iv) Explain why the value obtained in this reaction is lower than the actual value?
3. **I.** You are provided with solid **P**. Carry out the tests below and write the observations and inferences in the spaces provided
- (a) Heat about one third of solid **P** in a clean dry test tube  
(b) Add 10cm<sup>3</sup> of distilled water to the remaining solid **P** in a boiling tube and shake. Filter and retain both the residue and the filtrate. Divide the filtrate into four portions  
(i) To the first portion add aqueous Sodium hydroxide drop by drop till in excess  
(ii) To the second portion add dilute sulphuric acid  
(iii) To the third portion, add barium chloride solution  
(iv) To the fourth portion, add Lead (II) nitrate solution  
(c) (i) To the residue from (b) above in the test-tube, add dilute hydrochloric acid and retain the mixture  
(ii) To the mixture is(c)(i) above, add aqueous ammonia drop wise till in excess
- II.** You are provided with solid **Q**. Carry out the test below and write your observations and inferences in the spaces provided
- (a) Scoop a little of solid **Q** with a clean dry metallic spatula and ignite using a Bunsen flame.  
(b) Place the remaining solid **Q** in a boiling tube. Add about 10cm<sup>3</sup> of distilled water. Shake the mixture until it dissolves. Divide the solution into 4 portions  
(i) To the first portion, test the PH with PH paper.  
(ii) To the second portion, add solid sodium Carbonate and shake

### MIGORI – NYATIKE DISTRICT

#### CONFIDENTIAL INSTRUCTIONS.

*Apart from the normal fittings in the laboratory, each candidate will need the following chemicals and apparatus.*

1. 500ml of distilled water supplied in a wash bottle
2. 50ml burette

3. 25ml
4. a pipette filler
5. 2 conical flasks (250ml)
6. Source of heat (means of heating)
7. Stop watch/clock
8. A ruler
9. 100ml measuring cylinder
10. 50ml measuring cylinder
11. Complete retort stand
12. 12cm long magnesium ribbon labelled C
13. 100ml of solution A (sulphuric acid)
14. 80ml of solution B (Sodium hydroxide soltn.)
15. 100ml empty beaker
16. Funnel
17. Sand paper
18. 3g of solid E
19. 1g of solid F
20. Means of labeling
21. Six clean test tubes in a test tube rack
22. 3 boiling tubes in a rack
23. Metallic spatula
24. About 0.2g of sodium hydrogen carbonate
25. Glass rod.

#### Access

1. 2M Ammonia solution supplied with a dropper
2. 2M Sodium hydroxide solution supplied with a dropper
3. 2M Lead (II) Nitrate supplied with a dropper
4. 0.2M Silver Nitrate solution supplied with a dropper
5. Acidified potassium dichromate (VI) supplied with a dropper
6. Acidified Potassium Manganate (VII) supplied with dropper

#### N/B

1. Solution A is prepared by accurately measuring 27.5cm<sup>3</sup> of concentrated Sulphuric acid, then adding it to 700ml of distilled water then topping it to one litre. Density of acid 1.84g/cm<sup>3</sup>
2. Solution B is prepared by accurately measuring 20g of NaOH pellets and dissolving it in 800cm<sup>3</sup> of distilled water then topping to one litre with distilled water.
3. Solid E and F will be provided by the council. Solid E is highly deliquescent and should be handled cautiously

#### QUESTION 1.

You are provided with:

- Sulphuric acid solution A
- 0.5M sodium hydroxide solution B
- Magnesium ribbon labelled C

You are required to:-

- Investigate the rate of reaction between solution A and metal C
- Determine the concentration of sulphuric acid in moles per litre

#### Procedure I

- (i) Using a ruler, make 6 marks at 2cm length interval on the Magnesium ribbon provided.
- (ii) Transfer 50cm<sup>3</sup> of acid solution using a measuring cylinder into a clean dry 100ml beaker. Place 2cm length piece of magnesium ribbon into the beaker with the acid and immediately start the stop watch/clock. Shake gently and note the time taken for the piece of

magnesium ribbon to react completely.

- (iii) Record in table I below. Place another piece of magnesium ribbon (2cm) to the same solution and again note the time taken.
- (iv) Repeat the procedure until all six pieces of magnesium ribbon have reacted with the same solution initially placed in the beaker
- (v) Complete the table I below:

Note: Keep the solution obtained in this experiment for use in procedure II

(a) Table I

Piece of magnesium added	1	2	3	4	5	6
Length of magnesium added (cm)	2	4	6	8	10	12
Time taken t(second)						
Reciprocal of time $1/t^{(s^{-1})}$						

- (b) (i) Plot a graph of total length of magnesium ribbon added against reciprocal of time ( $1/t$ ) for the reaction to go to completion
- (ii) From your graph, determine the time taken when 4.5cm length of magnesium ribbon reacts completely. (Show parts on the graph)
- (iii) Write a chemical equation for the reaction between magnesium and sulphuric acid
- (iv) Given that the mass of solid V, which reacted was 0.12g and that atomic mass of magnesium is 24.0g, determine the number of mole of sulphuric acid that were used up during the reaction
- (v) From your graph, state and explain the relationship between the length of magnesium ribbon and the reciprocal of time ( $1/t$ )

#### Procedure II

Place all the solution obtained in procedure I in a clean 100ml measuring cylinder. Add distilled water to make 100cm<sup>3</sup> of solution. Transfer all the solution into a beaker and shake well. Label it solution D. Fill the burette with solution B. Pipette 25.0cm<sup>3</sup> of solution D into a conical flask. Add 2-3drops of phenolphthalein indicator and titrate with solution. Record your results in the table II below. Repeat the titration two more times

(f) Table II

Titration	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution B (cm <sup>3</sup> ) used			

- (c) (i) Determine the average volume of solution B used
- (ii) Calculate the number of moles of sodium hydroxide solution B used
- (d) Calculate:
- (i) The number of moles of sulphuric acid in 25.0cm<sup>3</sup> of solution D
- (ii) The number of moles of sulphuric acid in 100cm<sup>3</sup> of solution D
- (e) Determine the total number of moles of sulphuric acid in 50cm<sup>3</sup> of solution A
- (f) Calculate the concentration of the original sulphuric acid solution A in moles per litre
2. You are provided with solid E. Carry out the following tests and write your observations and inferences in the table below:
- (a) Place all the solid E in a boiling tube. Add about 15cm<sup>3</sup> of distilled water and shake vigorously for about 2 minutes
- b) (i) divide the solution into five equal portions in five different clean test tubes.
- (i) To the first portion, add 2M ammonia solution drop wise until in excess

- ii) To the second portion add 2M Sodium hydroxide solution dropwise until in excess
  - iii) To the third portion add 4 drops of 2M Lead (II) nitrate solution
  - iv) To the fourth portion, add 4 drops of 0.2M silver nitrate solution, then add 2M ammonia solution drop wise, until in excess
  - (v) Clean one end of the glass rod provided. Dip the clean end of the glass rod in the fifth portion.  
Remove the end and heat it in the non-luminous part of a Bunsen burner flame. Note the colour of the flame and record below:-
3. You are provided with solid F. Carry out the tests below. Write your observations and inferences in the spaces provided
- (a) Place about a half of solid F on a metallic spatula and burn it using a Bunsen burner flame
  - (b) Place the remaining of solid F in a boiling tube. Add about 10cm<sup>3</sup> of distilled water and shake the mixture well.
  - (c)
    - (i) Divide the mixture obtained into three portions.
    - (ii) To the first portion, add a small amount of solid sodium hydrogen carbonate
    - (iii) To the second portion, add about 1cm<sup>3</sup> of acidified potassium dichromate (VI) and warm
    - (iv) To the third portion, add two drops of acidified potassium manganate (VII)

### NYAMIRA DISTRICT

#### CONFIDENTIAL INSTRUCTIONS

Each candidate should be provided with:

- About 1g of malleic acid – solid P
- A clean metallic spatula
- Bunsen burner
- 500ml distilled water in a wash bottle
- Six test-tubes in a rack
- One test tube holder
- 2 boiling tubes
- About 1g of AlCl<sub>3</sub> – solid M
- One blue and one red litmus paper
- One volumetric flask (250ml)
- One pipette 25cm<sup>3</sup>
- One pipette filter
- One label
- Solid G – oxalic acid (exactly 3g) in a stoppered container
- 50ml or 100ml measuring cylinder
- 100cm<sup>3</sup> beaker
- One thermometer
- One stopwatch/clock
- About 0.2g NaHCO<sub>3</sub> solid
- 100ml of solution H
- One burette (50ml)
- 2 conical flasks

Access to:-

- 0.2M Pb(NO<sub>3</sub>)<sub>2</sub> Solution supplied with a dropper
- 0.2M Ba(NO<sub>3</sub>)<sub>2</sub> Solution supplied with a dropper
- 0.1M KI Solution supplied with a dropper
- 2M NaOH Solution supplied with a dropper
- 2M NH<sub>3(aq)</sub> Solution supplied with a dropper

- *Acidified  $K_2CV_2O_7$  Solution supplied with a dropper*

**Preparation instruction**

- Dissolve 6.4g of  $KMnO_4$  in  $400\text{cm}^3$  2M  $H_2SO_4$  and top to 1litre using distilled water

1. **You are provided with:**

- 0.0238 Moles (equivalent to 3g) of solid **G**
- Solution **H**, 0.04M acidified potassium manganate (VII)

**You are required to:**

- Determine the enthalpy of solution of solid **G**
- The number of moles of water of crystallization in solid **G**

**Procedure I:-**

Using a measuring cylinder place  $50\text{cm}^3$  of distilled water into a  $100\text{cm}^3$  of beaker. Stir the water gently with a thermometer and take its temperature after every half-minute. Record the reading in table I below. At exactly two minutes, add all solid **G** to the water at once. Stir well and take the temperature of the mixture after every half minute up to the fourth minute. Record your results in table I. Keep the solutions for procedure II below:

**Table I**

(a)

Time (min)	0	$\frac{1}{2}$	1	$1\frac{1}{2}$	2	$2\frac{1}{2}$	3	$3\frac{1}{2}$	4
Temperature ( $^{\circ}\text{C}$ )					<b>X</b>				

(b) On the grid provided, plot a graph of time (x-axis) against temperature

(c) (i) On the graph, show the change in temperature  $\Delta T$

(ii) Calculate :

The molar enthalpy of solution ( $\Delta H$  solution)

(Assume density of solution =  $1\text{g}/\text{cm}^3$  and show the sign of  $\Delta H$  solution specific heat capacity of solution =  $4.2\text{Jg}^{-1}\text{K}^{-1}$ )

**Procedure II**

Transfer the contents of the beaker into a 250ml volumetric flask. Rinse both the beaker and the thermometer with distilled water and add to the volumetric flask. Add more distilled water to eh mark.

Label this solution **G**

Fill the burette with solution **H**

Using a pipette and pipette filter, place  $25.0\text{cm}^3$  of solution **G** into a conical flask. Warm the mixture to about  $60^{\circ}\text{C}$ . Titrate the hot solution **G** with solution H until a permanent pink colour persists (while shaking). Record your readings in table 2. Repeat the titration two more times and complete table 2

**Table 2.**

Titre	<b>I</b>	<b>II</b>	<b>III</b>
Final burette reading			
Initial burette reading			
Volume of solution <b>H</b> used ( $\text{cm}^3$ )			

(e) **Calculate the:**

- Average volume of **H** used
- Number of moles of potassium manganate VII used
- Number of moles of **G** in  $25\text{cm}^3$  solution **G** given that 2moles of potassium manganate (VII) reacted completely with 5moles of **G**
- Relative formula mass of **G**

(f) Formula of **G** has the form  $G \cdot XH_2$  Determine the value of **X** in the formula given the relative formula mass for **G** is 90.0 and atomic mass of Oxygen is 16 and that

of Hydrogen is 1.0

2. You are provided with solid **M** and carry out the tests below write your observations and inferences in the spaces

(i) To a dry boiling tube, place all solid **M** and add  $12\text{cm}^3$  of distilled water and use the solution for the tests below:-

(ii) To  $2\text{cm}^3$  of solution, add both litmus papers

(iii) To  $2\text{cm}^3$  of solution, add aqueous sodium hydroxide drop wise until excess

(iv) To  $2\text{cm}^3$  of solution, add aqueous ammonia drop wise until in excess

(v) To  $2\text{cm}^3$  of the solution, add 2 drops of aqueous potassium iodide

(vi) To  $2\text{cm}^3$  of solution, add 3 drops of aqueous lead (ii)nitrate

(vii) To  $2\text{cm}^3$  of solution, add 3 drops of aqueous Barium nitrate solution

2. B. You are provided with solid **P**. Carry out the test below. Write your observations and inferences in the spaces provided:-

(a) Place one third of solid **P** on a metallic spatula and burn it using a Bunsen burner

(b) Place the remaining of solid **P** in a test-tube . Add about  $6\text{cm}^3$  of distilled water and shake the mixture (retain the mixture for use in test (c)

(c) (i) To  $2\text{cm}^3$  of the mixture in (b) above add a spatula end full of  $\text{NaHCO}_3$  solid

(ii) To  $2\text{cm}^3$  of the mixture, add  $2\text{cm}^3$  of acidified potassium dichromate (VI) and warm

(iii) To  $2\text{cm}^3$  of the mixture add two drops of acidified potassium manganese (VII) and shake

well

## SOTIK DISTRICT

### CONFIDENTIAL

#### Requirements:

*In addition to the equipment, apparatus and chemical found in the chemistry laboratory each candidate will require the following:*

- *About  $100\text{cm}^3$  of solution L*
- *About  $100\text{cm}^3$  of solution N*
- *A burette*
- *A pipette*
- *3 conical flasks*
- *4.0g of solid K*
- *Thermometer*
- *Distilled water*
- *Test tube holder*
- *3 boiling tubes*
- *Phenolphthalein indicator*
- *Filter paper*
- *Filter funnel*
- *Source of heat*
- *1g of solid x*
- *10ml measuring cylinder*
- *2M  $\text{HNO}_3$*
- *Seven test tubes*
- *Stirring rod*
- *2M NaOH*
- *2M  $\text{NH}_4\text{OH}$*
- *2M HCL*
- *0.5M lead (II) nitrate*

- 0.5M barium chloride

**NOTES**

- Solution L is prepared by dissolving 5g of NaOH in a litre of distilled water
- Solution N is prepared by dissolving 9.84g of  $C_2H_2O_4 \cdot 2H_2O$  in a litre of distilled water (oxalic acid)
- Solid K is potassium chlorate
- Solid X is a mixture of copper (II) oxide and zinc sulphate in the ratio 1:1

1. You are provided with:-

- Solution L containing 5g per litre of sodium hydroxide
- Solution N containing 9.84g per litre of oxalic crystals of formula  $C_2H_2O_4 \cdot X H_2O$
- You are required to determine the number of moles of water of crystallization X in one mole of oxalic acid ( $C_2H_2O_4 \cdot XH_2O$ )
- You are required to determine the number of moles of water of crystallization X; in one mole of oxalic acid ( $C_2H_2O_4 \cdot XH_2O$ )

**Procedure**

- Fill the burette with solution N.
- Pipette 25cm<sup>3</sup> of solution L into 250cm<sup>3</sup> conical flask and add 2 drops of phenolphthalein indicator to it and titrate with solution N.
- Record your results in the table below
- Repeat the experiment twice to obtain consistent readings and complete the table

**Table 1**

Titration	1	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution N used (cm <sup>3</sup> )			

- Calculate the average volume of solution N used
- Determine:-
  - The concentration of sodium hydroxide in one litre of solution L (Na =23, O= 16, H= 1)
  - Write the equation of the reaction taking place
  - The number of moles of anhydrous carbohydrates oxalic acid in one litre of the solution N
  - The relative formula mass of anhydrous oxalic acid, solution N (C = 12, H=1, O = 16)
  - The number of moles of water of crystallization in one mole of oxalic acid

2. You are provided with solid K, a boiling tube and a thermometer. You are required to determine the solubilities of solid K, at various temperatures.

**Procedure:-**

- Carefully transfer all the 4.0g of solid K into a clean boiling tube and add 10cm<sup>3</sup> of distilled water from a burette.
- Heat the boiling tube and its contents gently with shaking until all the solid dissolves. (Do not spill the solution during heating.) Stop heating when all the solid dissolves. See the diagram below:-

- (c) Gently stir the solution using the thermometer and record the temperature at which crystals appear. (The crystals appear as small shining particles)
- (d) Using a burette add  $2.5\text{cm}^3$  of water to the solution and heat until all the solid dissolves. Repeat procedure(c)
- (e) Repeat the experiment each time adding  $2.5\text{cm}^3$  of distilled water from a burette. Record the results in the table below:-

<b>Total volume of water (<math>\text{cm}^3</math>)</b>	10.00	12.50	15.00	17.50	20.00	22.50
<b>Mass of solid K (g)</b>	4.00	4.00	4.00	4.00	4.00	4.00
<b>Solubility of K in g/100g of water</b>	40.00			22.90		17.78
<b>Temperature at which crystals appear (<math>^{\circ}\text{C}</math>)</b>						

- (i) Complete the table by filling in the row for solubility of **K** and temperature at which crystals appear
  - (ii) On the grid provided, draw the graph of solubility of **K** versus temperature
  - (iii) At which temperature is solubility 24/100g of water?
  - (iv) If a solution containing 30g of **K** at  $85^{\circ}\text{C}$  is cooled to  $60^{\circ}\text{C}$ 
    - (a) At which temperature will crystals first appear?
    - (b) What would be the total mass of the crystals obtained when the solution finally cools to  $60^{\circ}\text{C}$ ?
    - (c) What is the solubility of **K** at  $75^{\circ}\text{C}$ ?
3. You are provided with solid **X** which is a mixture of two solids. Carry out the following tests to identify the cations and anions present in the mixture.
- (a) Add about  $10\text{cm}^3$  of water, stir and then filter. Keep both the residue and the filtrate for further reactions.
  - (b) Place the residue in a boiling tube and add dilute nitric acid and warm. Divide the solution into two portions
  - (c) To the 1<sup>st</sup> portion add  $\text{NaOH}_{(\text{aq})}$  till in excess
  - (d) To the 2<sup>nd</sup> portion add aqueous ammonia till in excess
  - (e) Divide the filtrate into 5 portions. To the 1<sup>st</sup> portion add dilute HCl
  - (f) To the 2<sup>nd</sup> portion add lead (II) Nitrate solution
  - (g) To the third portion add Barium Chloride solution
  - (h) To the 4<sup>th</sup> portion add sodium hydroxide solution till in excess
  - (i) To the 5<sup>th</sup> portion add aqueous ammonia till in excess

## UGENYA –UGUNJA DISTRICTS

### CONFIDENTIAL IDENTITIES OF SOLIDS

*M- Potassium manganate (VII) crystals,  $\text{KMnO}_4$*

*N – Ammonium Ferrous sulphate hexahydrate,  $(\text{NH}_4)_2 \cdot \text{Fe}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$*

*S – Oxalic acid  $\text{H}_2\text{C}_2\text{O}_4 \cdot 2\text{H}_2\text{O}$*

**Q- Hydrated Barium Chloride,  $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}$**

**R- Oxalic acid**

*Note: S and R are the same substances*

### **INSTRUCTIONS**

*In addition to the apparatus and chemicals found in the chemistry laboratory, each candidate will require the following:*

1.  $150\text{cm}^3$  of solution M
2.  $100\text{cm}^3$  of solution N
3.  $100\text{cm}^3$  of solution S
4. One  $50\text{cm}^3$  burette
5. One  $25\text{cm}^3$  pipette and pipette filter
6. One thermometer ( $-10^\circ\text{C} - 110^\circ\text{C}$ )
7. One filter funnel
8. Two conical flasks
9. Tripod stand and wire gauze
10. Source of heat
11. 8 clean dry test tubes in a rack
12. 2 boiling tubes
13. 1 metallic spatula
14. 250ml of distilled water in a wash bottle
15. About 1g of solid R
16. About 1g of solid Q
17. 1 red and 1 blue litmus paper

#### **Access to:**

- 1) 2M NaOH supplied with a dropper
- 2) 0.5M  $\text{Na}_2\text{SO}_4$  supplied with a dropper
- 3) 0.1M  $\text{Pb}(\text{NO}_3)_2$  supplied with a dropper
- 4) Methyl orange indicator
- 5) 0.5M  $\text{Ba}(\text{NO}_3)_2$  supplied with a dropper

#### **Notes:**

1. Solution M is prepared by dissolving 3.16g of solid M in  $400\text{cm}^3$  of 2M  $\text{H}_2\text{SO}_4$  and making it up to 1 litre of solution with distilled water.
2. Solution N is prepared by dissolving 23.5g of solid N in  $200\text{cm}^3$  of 2M  $\text{H}_2\text{SO}_4$  and making it up to 1 litre of solution with distilled water.
3. Solution S is prepared by dissolving 5g S in  $600\text{cm}^3$  of distilled water and making it up to 1 litre of solution with distilled water

#### **6) QUESTION 1**

##### **You are provided with:**

- Acidified aqueous Potassium manganate (VII)  $\text{KMnO}_4$ , solution M (to be used also in question 3).
- Solution N, containing 23.5g of ammonium iron (II) sulphate,  $(\text{NH}_4)_2 \text{Fe}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$ , per litre.
- Solution S, containing 5.0g of a dibasic acid,  $\text{H}_2\text{X} \cdot 2\text{H}_2\text{O}$  per litre

##### **You are required to:-**

1. Standardize the potassium manganate (VII), solution M, using the ammonium iron (II) sulphate, solution N.
- Use the standardized potassium manganate (VII), solution M to determine the concentration of the dibasic acid  $\text{H}_2 \text{X} \cdot 2\text{H}_2\text{O}$ , solutions S and then the formula mass of X.

**Procedure I**

Fill the burette with solution M.

Pipette 25.0cm<sup>3</sup> of solution N into a conical flask. Titrate solution N with solution M until a permanent pink colour just appears. Record your results in table I below.

Repeat this procedure to complete table I

(a) Table I

	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution M used (cm <sup>3</sup> )			

(b) Determine the average volume of solution M used,

(c) Calculate the concentration of the ammonium iron (II) sulphate, solution N, in moles per litre. (RFM of (NH<sub>4</sub>)<sub>2</sub> Fe(SO<sub>4</sub>)<sub>2</sub> .6H<sub>2</sub>O = 392 )

(d) Calculate the number of moles of iron (II) ions in the 25.0cm<sup>3</sup> of solution N

(e) Using the ionic equation for the reaction between manganate (VII) and iron (II) ions, given below, calculate the concentration of manganate (VII) in solution M in moles per litre.

**Procedure II**

Pipette 25.0cm<sup>3</sup> of solution S into a conical flask. Heat this solution to about 70°C and titrate the hot solution S with solution M until a permanent pink colour just appears. Shake

thoroughly

during the titration. Record your results in table II. Repeat this procedure to complete the table

II

(f) Table II

	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution M (cm <sup>3</sup> )			

(g) Record the average volume of solution M used (show how you arrive at the answer)

V<sub>2</sub>=.....

(h) Calculate the number of moles of the manganate (VII) ions in volume V<sub>2</sub>

(i) Given that 2 moles of the manganate (VII) ions react with 5 moles of the dibasic acid, H<sub>2</sub>X . 2H<sub>2</sub>O, calculate the number of moles of the dibasic acid, H<sub>2</sub>X . 2H<sub>2</sub>O in 25cm<sup>3</sup> of solution S

(j) Calculate the concentration of the dibasic acid H<sub>2</sub>X . 2H<sub>2</sub>O, in moles per litre

(k) Calculate the formula mass of X in the dibasic acid, H<sub>2</sub>X . 2H<sub>2</sub>O. (H= 1.0, O = 16.0

2. You are provided with solid Q. Carry out the following tests and write your observations and inferences in the spaces provided

(a) Place about one-half of solid Q in a dry test tube. Heat strongly and test any gas produced using litmus papers

b) Place the remaining solid Q in a boiling tube. Add about 10cm<sup>3</sup> of distilled water and shake well.

i) To about 2cm<sup>3</sup> of the solution in a test tube add sodium hydroxide solution till in excess

ii) To about 2cm<sup>3</sup> of solution Q in a test tube add about 2cm<sup>3</sup> of 0.5M sodium sulphate solution

iii) To about 2cm<sup>3</sup> of solution Q in a test tube, add about 4cm<sup>3</sup> of barium nitrate solution

- (iv) To about 2cm<sup>3</sup> of solution Q in a test tube, add 3 drops of lead (II) nitrate solution and heat the mixture to boiling
3. You are provided with solid R. Carry out the following tests and write your observations and inferences in the spaces provided
- (a) Place a little of solid R in a clean metallic spatula and ignite with a bunsen flame
- (b) Place all the remaining solid R in a boiling tube. Add about 6cm<sup>3</sup> of distilled water and shake well. Use 2cm<sup>3</sup> portions to carry out the test below:
- (i) Add 2cm<sup>3</sup> of solution obtained by diluting 1cm<sup>3</sup> of solution M with 5cm<sup>3</sup> of distilled water to 2cm<sup>3</sup> of solution R.
- (ii) Add 3 drops of methyl orange to 2cm<sup>3</sup> of solution R

## MATUNGU DISTRICT

### CONFIDENTIAL INSTRUCTIONS.

*In addition to the apparatus and fittings found in the laboratory each candidate should have:*

1. *One 25ml pipette*
2. *One 3-way pipette filler*
3. *One 0-50ml/s Burette*
4. *Two 250 ml conical flask*
5. *One stop watch /clock*
6. *One 250ml glass beaker*
7. *One 100ml measuring cylinder*
8. *One 100ml glass beaker*
9. *One thermometer (-10 to 110°C)*
10. *One label*
11. *One piece of white paper*
12. *One measuring cylinder (10mls)*
13. *Six dry clean test tube on test-tube tack*
14. *One boiling tube*
15. *One clean dry metallic spatula*
16. *250cm<sup>3</sup> distilled water in wash bottle*
17. *One filter paper (dry)*
18. *One filter funnel*
19. *One glass rod*
20. *About 0.5g sodium hydrogen carbonate supplied in a stoppered bottle*
21. *0.5g of solid F (accurately measured)*
22. *About 130cm<sup>3</sup> of sodium thiosulphate (0.25M sodium thiosulphate, solution D)*
23. *About 30cm<sup>3</sup> of 2.0M HCl (solution E)*
24. *About 0.5g solid T*
25. *About 0.5g solid X*
26. *About 180cm<sup>3</sup> of solution B*
27. *About 80cm<sup>3</sup> of solution A*

**5. Ethanol in a stoppered bottle**

Mocks Topical Analysis

educationgroup.com

141

**NOTE:**

1. **Solid X – Oxalic acid**
2. **Solid T – Calcium Chloride**
3. **Solution A – 0.5M NaOH**
4. **solution B – 0.5M HCl**
5. **Solid F – ZnCO<sub>3</sub> (Zinc carbonate)**

**Question 1.**

**You are provided with:**

- Solution A, sodium hydroxide
- Solution F, 0.2g of a carbonate (MCO<sub>3</sub>)
- Solution B, 0.5M Hydrochloric acid
- Phenolphthalein indicator

**You are required to:**

(a) Standardize solution A with solution B

Using a pipette and a pipette filler place 25.0cm<sup>3</sup> of solution A into a 250ml conical flask

Add 2-3 drops of phenolphthalein indicator

Record your results in table 1 below

Repeat the procedure two more items and complete table 1

**Table 1**

	I	II	III
Final burette readings (cm <sup>3</sup> )			
Initial burette readings (cm <sup>3</sup> )			
Volume of solution B used (cm <sup>3</sup> )			

(a) Calculate the average volume of solution B used

(b) (i) Determine the moles of sodium hydroxide used

(ii) Calculate the molarity of Sodium hydroxide

**Procedure II**

- Place all the 0.2g of solid F into a 250cm<sup>3</sup> beaker.
- Measure 100cm<sup>3</sup> of the 0.5M hydrochloric acid solution using 100cm<sup>3</sup> measuring cylinder and add it to the solid in the beaker.
- Shake well until effervescence stops; label this solution C
- Pipette 25.0cm<sup>3</sup> of solution C into a 250cm<sup>3</sup> conical flask
- Add 2-3 drops of Phenolphthalein indicator
- Titrate solution C against solution A
- Repeat the procedure and complete table II below:

**Table II**

	I	II	III

Calculate the:

(a) Average volume of solution A used

(b) Number of moles of hydrochloric acid that was in the 25cm<sup>3</sup> of solution C used

(c) (i) Number of moles of the Carbonate in 0.2g

(ii) Relative formula of the carbonate solid F

**QUESTION 2**

**You are provided with:**

- o Solution D, 0.25M Sodium thiosulphate

- Solution E, 2.0M Hydrochloric acid

**You are required to:**

Determine the effect of temperature on rate of reaction.

**Procedure:**

- Place 50cm<sup>3</sup> of solution D in 100ml glass beaker provided and record its steady temperature.
- Mark a cross (x) on a piece of white paper and place the beaker containing the thiosulphate on it.
- Measure 5cm<sup>3</sup> of solution E and add it to the beaker with the thiosulphate and swirl carefully not to pour the content.
- Start a stop watch immediately the last drop of acid is added
- Look through the solution and note the time taken for the mark to become invisible
- Repeat the procedure with the thiosulphate heated to 30°C, 40°C, 50°C and 60°C

Record your results in table III below:

**Table III**

Volume of thiosulphate used (cm <sup>3</sup> )	Volume of solution E used (cm <sup>3</sup> )	Temperature (°C)	Time (secs)	1/t
25	5	Initial temp <sup>o</sup>		
25	5	30		
25	5	40		
25	5	50		
25	5	60		

- Use your results to plot a graph of 1/t against temperature
- From your graph, determine the time taken if the temperature of the solution is 318K
- Explain how the rate of reaction changes with increase in temperature

**QUESTION 3**

**Procedure 1:**

You are provided with solid T.

Place a spatula full of solid T in a clean boiling tube then add about 10cm<sup>3</sup> of distilled water. Shake the mixture for about 1 minute then filter. Divide the filtrate into 4 portions.

- To the first portion add about 2cm<sup>3</sup> of sodium hydroxide (solution A)
- To the second portion add about 2cm<sup>3</sup> of 2.0M hydrochloric acid
- To the third portion, add a few drops of phenolphthalein indicator
- To the fourth portion dip a clean glass rod and place the soaked end of the glass rod onto a non-luminous flame

**Procedure 2:**

You are provided with solid X. Carry out the tests below and record your observation and inferences in the table below:

Place one spatula end full of solid X in a boiling tube and add about 10cm<sup>3</sup> of distilled water. Shake well and use for the tests below:

- To the 2cm<sup>3</sup> of solution in a test-tube, add one spatula end full of sodium hydrogen carbonate
- To 2cm<sup>3</sup> of solution, add three drops of acidified potassium manganate (VII) solution
- Place about 5cm<sup>3</sup> of ethanol in a test tube and add drops of concentrated sulphuric acid then add a spatula end full of solid X. warm the mixture carefully. Shake well and pour the mixture into 20cm<sup>3</sup> of water in a beaker

**CONFIDENTIAL**

**Requirements:-**

1. **Solution X<sub>1</sub>, acidified potassium manganate (VII) solution. It is prepared by dissolving 3.16g of KMnO<sub>4</sub> in 400cm<sup>3</sup> of 2M H<sub>2</sub>SO<sub>4</sub>. add distilled water to make it up to 1litre solution**
  2. **Solution X<sub>2</sub>, 0.1M Iron (II) Sulphate**  
–It is prepared by dissolving 20.8G of Iron (II) Sulphate in 1litre of distilled water, add a few drops of concentrated sulphuric (VI) acid, to avoid oxidation.
  3. **Solution X<sub>3</sub> contains 3.45g of sodium nitrite in 1 litre of solution**
  4. **Solid M – Potassium nitrate**
  5. **Solid Y - (Oxalic acid)**
1. **You have been provided with:**
- (i) Solution X<sub>1</sub>, acidified Potassium manganate (VII) solution
  - (ii) Solution X<sub>2</sub>, 0.1M FeSO<sub>4</sub>
  - (iii) Solution X<sub>3</sub>, Sodium Nitrite

**You are required to:**

- (a) Standardize solution X<sub>1</sub>, using X<sub>2</sub>
- (b) Use experimental results to write ionic equation for the reaction between manganate (VII) ions and nitrate ions

**Procedure I:-**

- (i) Fill the burette with solution X<sub>1</sub>
- (ii) Pipette 25cm<sup>3</sup> of solution X<sub>2</sub> into 250ml conical flask
- (iii) Titrate solution X<sub>2</sub> with solution X<sub>1</sub> until a pink colour just appear
- (iv) Record your results in table 1:

**TABLE 1**

Final burette reading (cm <sup>3</sup> )	I	II	III
Initial burette reading (cm <sup>3</sup> )			
Volume of X <sub>1</sub> used cm <sup>3</sup>			

**Calculations:**

- (a) Calculate the average volume of solution X<sub>1</sub> used
- (b) Calculate the number of moles of Fe<sup>2+</sup> in 25cm<sup>3</sup> of solution X<sub>2</sub> used
- (c) If the ratio MnO<sub>4</sub><sup>-</sup>: Fe<sup>2+</sup> is 1:5, calculate the concentration of MnO<sub>4</sub><sup>-</sup> ions in moles per dm<sup>3</sup>

**Procedure II:**

- (i) Rinse the conical flask and refill the burette with solution X<sub>1</sub>
- (ii) Pipette 25cm<sup>3</sup> of X<sub>3</sub> into a clean conical flask
- (iii) Warm this solution to about 50°C (**Note:** Be accurate with temperature)
- (iv) Titrate the solution in (iii) above against solution X<sub>1</sub> from the burette to a pink colour
- (v) Record your results in table II.

**Calculations:**

- (a) Calculate the average volume of X<sub>1</sub> used
  - (b) Calculate the number of moles of :
    - (i) Sodium nitrite in one litre of solution (Na = 23, N = 14, O = 16)
    - (ii) Nitrite ions in 25cm<sup>3</sup> of solution X<sub>3</sub> used
    - (iii) Moles of solution X<sub>1</sub> used
  - (c) (i) Work out the approximate ratio MnO<sub>4</sub><sup>-</sup>: NO<sub>2</sub><sup>-</sup>  
(ii) Write down the ionic equation for the reaction between acidified manganate (VII) ions and nitrite ions
2. You are provided with solid M. You are required to:
- (i) Carry out test on solid M

(ii) Record your observations and inferences accordingly.

**Procedure:-**

1. (i) Dissolve solid **M** in 15cm<sup>3</sup> of distilled water. Divide the resulting solution into six portions.  
Record your observations
- (ii) Add 3-4 drops of Lead nitrate to the first portion
- (iii) Add 3-4 drops of Barium nitrate solution to the second portion
- (iv) Add 3-4 drops of sodium hydroxide solution to the third portion
- (v) Dip a glass rod into the fourth portion. Heat the end of glass rod dipped into the solution in a non-luminous flame
- (vi) Add 4 drops of acidified manganate (VII) to the fifth portion and warm the mixture

**Q3.**

1. Solid **Y**-1spatulaful
  2. Solid **Z**-1spatulaful
  3. 6 test tubes
  4. 1 red + 1blue litmus papers
  5. Metallic spatula
  6. pH paper
3. (a) You are provided with solid **Y**

**You are required to:**

- (i) Carry out the test described below on solid **Y**
- (ii) Record your observations and inferences
- (iii) Test for any gas (es) produced

**Procedure-**

- (i) Place a spatula of solid **Y** into a boiling
- (ii) Add about 15cm<sup>3</sup> of distilled water and shake well
- (iii) Divide the resulting solution into five portions
- (iv) Use a universal indicator paper to test portion one of the solution
- (v) Add a spatula of sodium carbonate to the second portion
- (vi) Add three drops of Potassium manganate (VII) solution to the 3<sup>rd</sup> portion
- (vii) Add three drops of bromine water to the 4<sup>th</sup> portion. Warm the mixture if necessary
- (viii) Place 2cm<sup>3</sup> of ethanol in a test-tube. Add 2 drops of concentrated Sulphuric (VI) acid and then a spatula end full of solid **Y**. Shake well and warm the mixture carefully, pour the warm mixture into 25cm<sup>3</sup> of cold water in a beaker and note the smell

**MUMIAS DISTRICT**

**INSTRUCTIONS.**

*In addition to the apparatus and fittings found in the laboratory each candidate should have:*

1. *One 25ml pipette*
2. *One 3-way pipette filler*
3. *One 0-50ml Burette*
4. *Two 250ml conical flask*
5. *One 100ml measuring cylinder*
6. *One 100ml glass beaker*
7. *One thermometer (-10°C to 110°C)*
8. *One stop watch / clock*
9. *One label*
10. *One 10ml measuring cylinder*
11. *White tile*

12. 250ml beaker
13. Stand and clamp
14. 10cm<sup>3</sup> of solution A
15. 80cm<sup>3</sup> of solution B
16. 160cm<sup>3</sup> of solution C
17. 200cm<sup>3</sup> distilled water supplied in wash bottle
18. 10cm<sup>3</sup> Potassium manganate
19. 250cm<sup>3</sup> 1.0M sulphuric acid
20. 75cm<sup>3</sup> of solution X
21. About 0.5g of solid K
22. About 0.5g of solid F
23. One blue and one red litmus papers
24. One metallic spatula
25. Six dry and clean test-tubes
26. One boiling tube
27. About 0.5g Sodium hydrogen carbonate

**ACCESS TO:**

1. Source of heat (Bunsen burner)
2. Phenolphthalein indicator supplied with a dropper.
3. Solution Q (aqueous sodium sulphate) supplied with a dropper
4. Acidified lead II nitrate supplied with a dropper
5. Ethanol
6. Conc. H<sub>2</sub>SO<sub>4</sub>

**NOTE:**

1. Solution A is 4.0m hcl
2. Solution B is 0.1m H<sub>2</sub>C<sub>2</sub>O<sub>4</sub>.2H<sub>2</sub>O
3. Solution C is 0.2m NaOH
4. Solution X is made by dissolving 5g of sugar (sucrose) in 100m/s distilled water
5. Potassium Manganate (VII) solution D is made by dissolving 3.16g of the solid in 600cm<sup>3</sup> of distilled water and diluting to 1 litre.
6. Solid K is Zinc chloride
7. Solid F is oxalic acid

**Question 1**

*You are provided with:*

- Aqueous Hydrochloric acid solution A
- Solution B containing 6.3g of dibasic acid, H<sub>2</sub>C<sub>2</sub>O<sub>4</sub>.2H<sub>2</sub>O in 500cm<sup>3</sup> of solution.
- Aqueous sodium hydroxide solution C
- Phenolphthalein indicator

*You are required to:*

- (a) Standardize the sodium hydroxide solution C
- (b) Use the standardized solution C to determine the concentration of solution A

**Procedure 1**

- Fill the burette with solution B
- Using a pipette and pipette filler, place 25.0cm<sup>3</sup> of solution C into a 250ml conical flask.
- Add 2-3 drops of Phenolphthalein indicator
- Titrate solution B against solution C
- Repeat the procedure and complete table 1 below:

**Table 1**

	I	II	III
Final burette readings (cm <sup>3</sup> )			
Initial burette readings (cm <sup>3</sup> )			
Volume of solution <b>B</b> used (cm <sup>3</sup> )			

- (a) Calculate the average volume of solution **B** used  
 (b) Calculate the concentration of the dibasic acid ( C = 12, H = 1, O = 16)  
 (c) Calculate the molarity of solution **C**

**Procedure 2**

- Using a 100cm<sup>3</sup> measuring cylinder, measure 90cm<sup>3</sup> of distilled water and place it into a 250cm<sup>3</sup> beaker.
- Add 10cm<sup>3</sup> of aqueous hydrochloric acid solution **A**
- Using a 10cm<sup>3</sup> measuring cylinder, mix the solution well and label it solution **D**
- Fill a burette with solution **D**.
- Pipette 25.0cm<sup>3</sup> of the solution **C** into a 250cm<sup>3</sup> conical flask
- Titrate using phenolphthalein indicator

Record your results in table 2

**Table 2**

	I	II	III
Final burette readings (cm <sup>3</sup> )			
Initial burette readings (cm <sup>3</sup> )			
Volume of solution <b>D</b> used (cm <sup>3</sup> )			

- (a) Calculate the average volume of solution **D** used  
 (b) How many moles of hydrochloric acid were present in 100cm<sup>3</sup> of solution **D**  
 (c) Calculate the molarity of the original solution **A** used

**Question 2**

**You are provided with:**

- 1.0M sulphuric acid
- Potassium manganate (VII) solution **D**
- Aqueous glucose, solution **X**

**You are required to:**

Determine the rate of reaction between acidified potassium manganate (VII) and aqueous glucose at different temperatures.

**Procedure**

- Place 2cm<sup>3</sup> of solution **D** into a 250ml beaker. Using a 100ml measuring cylinder, add 50cm<sup>3</sup> of 1.0M Sulphuric acid to the beaker containing solution **D**.
- Heat the mixture to about 65°C, add 15cm<sup>3</sup> of solution **X** and start a stop watch immediately.
- Stir the mixture using a thermometer and note the time and temperature at which the colour of the mixture changes from purple to colourless.
- Clean the beaker and repeat the procedure at temperatures, 60°C, 55°C, 50°C and 45°C to complete table 3 below:-

**Table 3**

Temperature before mixing (°C)	60	55	50	45
Temperature when solution becomes colourless (°C)				
Time (seconds)				
$1/\text{time (s}^{-1}\text{)}$				

- (a) Plot a graph of  $1/t$  (y-axis) against the temperature at the point when the solution becomes colourless
- (b) From your graph, determine the time that the reaction would take if the temperature at which the solution becomes colourless is 42.5°C
- (c) Explain the shape of your graph

**Question 3.****You are provided with:**

- Solid **K**

**Procedure**

Carry out the tests below. Record your observations and inferences in the spaces provided.

- (a) Heat about half spatula end full of solid **K** in a clean test tube, heat gently then strongly. Test any gas produced using blue litmus papers.
- (b) Dissolve the remaining solid **K** in a boiling tube in about 10cm<sup>3</sup> of distilled water and use the solution for the tests below:
- (i) To about 2cm<sup>3</sup> of solution **K**, add aqueous potassium hydroxide dropwise until in excess
  - (ii) To about 2cm<sup>3</sup> of solution **K**, add about 5cm<sup>3</sup> of solution **Q** (aqueous sulphate)
  - (iii) To about 3cm<sup>3</sup> of the solution **K**, add about 6cm<sup>3</sup> of acidified lead II nitrate

**You are provided with:**

- o Solid **F**

**Procedure**

Add about 10cm<sup>3</sup> of distilled water into half spatula end full of solid **F** in a boiling tube and shake thoroughly.

- (c) To about 2cm<sup>3</sup> of solution **F**, add the whole of sodium hydrogen carbonate
- (d) To about 2cm<sup>3</sup> of solution **F**, add about 5 drops of acidified potassium manganate (VII) then warm the mixture.
- (e) Place about 5cm<sup>3</sup> of ethanol in a test-tube and add drops of concentrated sulphuric acid then add the remaining solid **F**. Warm the mixture carefully. Shake well and pour the mixture into 20cm<sup>3</sup> of water in a beaker

**KISUMU DISTRICT****CONFIDENTIAL****INSTRUCTIONS.**

*In addition to ordinary apparatus in the laboratory each candidate will require;*

1. *2g Solid A*
2. *100cm<sup>3</sup> solution B - Hydrochloric acid*
3. *200cm<sup>3</sup> solution C - Sodium hydroxide*
4. *Burette*
5. *Pipette*
6. *Two 250ml conical flask*
7. *Methyl orange indicator*
8. *100ml measuring cylinder*
9. *10ml measuring cylinder*
10. *Distilled water*
11. *Means of labelling*
12. *30cm<sup>3</sup> solution S*

13. 50cm<sup>3</sup> solution S- Hydrochloric acid
14. 50cm<sup>3</sup> solution T-Sodium hydroxide
15. Ten test tubes
16. Rack
17. 100ml
18. Thermometer
19. Source of heat
20. Solid U
21. Spatula
22. Red and blue litmus paper
23. Filter funnel
24. Filter paper

Access to the following:-

- 2M Sodium hydroxide
- 2M potassium iodine
- 2M Nitric acid
- 2M Ammonia hydroxide
- Solid A – Per student measure [0.32g CaCO<sub>3</sub> + 1.68NaCl]
- Solution B - [0.5M HCl]
- Solution C - [0.4M NaOH]
- Solution S - [1.0M HCl]
- Solution T - [1.0M NaOH]
- Solid U - [One spatula CuCO<sub>3</sub> + one spatula Pb(NO<sub>3</sub>)<sub>2</sub>]

### QUESTION 1.

You are provided with:

- 2g of an impure calcium carbonate, solid A
- Hydrochloric
- Hydrochloric acid, solution B
- 16g per litre solution of sodium hydroxide, solution C

You are required to determine;

- Concentration of solution B in moles per litre
- Percentage of the carbonate in mixture A

### PROCEDURE I:

Pipette 25.0cm<sup>3</sup> of solution C into a 250ml flask. Add 2-3 drops of methyl orange indicator. Titrate solution C with the hydrochloric acid solution B. Repeat this procedure two more times and record your results in table I below:-

Table I:-

Titration	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution B (cm <sup>3</sup> ) used			

Calculations:-

- (a)
  - (i) Calculate the average volume of solution B used
  - (ii) Calculate the number of moles of sodium hydroxide solution C pipetted
  - (iii) Calculate the number of moles of hydrochloric acid solution B that reacted with sodium hydroxide in (a) (ii) above
  - (iv) Calculate the molarity of hydrochloric acid solution B

**PROCEDURE II:**

- (a) Place all the 2g of solid **A** provided into a conical flask and add 25.0cm<sup>3</sup> of hydrochloric acid solution **B** to it using a clean pipette. Swirl the contents of the flask vigorously until effervescence stops. Using a 100ml measuring cylinder, add 175cm<sup>3</sup> of distilled water to make up the solution up to 200cm<sup>3</sup> of solution. Label this solution **D**. Using a clean pipette, transfer 25.0cm<sup>3</sup> of solution **D** into a conical flask and add 2-3 drops of methyl orange indicator. Titrate solution **D** with sodium hydroxide solution **C**. Repeat the procedure two more times and record your in the table II below:-

**table II:**

Titration	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution <b>C</b> (cm <sup>3</sup> ) used			

- (b) (i) Calculate the average volume of solution **C** used  
(ii) Calculate the number of moles of sodium hydroxide solution **C** present in the average volume  
(iii) Calculate the number of moles of hydrochloric acid present in the original 200cm<sup>3</sup> of solution **D**  
(iv) Calculate the number of moles of hydrochloric acid solution **B** contained in the original 25.0cm<sup>3</sup> of solution **B** used  
(v) Calculate the moles of calcium carbonate that reacted with hydrochloric acid solution **D**  
(vi) Calculate the mass of calcium carbonate in 2g of solid **A**  
(vii) Calculate the percentage of calcium carbonate present in the mixture (solid **A**)

2. **You are provided with :-**

- Solution of hydrochloric acid, **S**
- 1.0M solution of sodium hydroxide, solution **T**

**You are required to:**

- (i) Calculate the heat of molarity of hydrochloric acid, solution **S**  
(ii) Determine the heat of reaction for mole of hydrochloric acid with sodium hydroxide.

**PROCEDURE**

- I. Place six test tubes on a test tube rack. Using a 10ml measuring cylinder, measure and pour 5cm<sup>3</sup> of solution **T** into each of the test tubes  
II. Measure 20.0cm<sup>3</sup> of solution **S** and pour into a 100ml beaker. Measure the temperature of this solution and record in table III below.  
III. Pour the first portion of the 5cm<sup>3</sup> of solution **T** into the beaker containing the 20.0cm<sup>3</sup> of solution **S**. Stir the mixture carefully using a thermometer and record the highest temperature reached in table III.  
IV. Pour the second portion immediately into the mixture in the beaker, stir carefully and record the highest temperature in table III continue this procedure with the remaining portions of solution **T** to complete table III.

**Table III:**

(a)

Titration	0	5	10	15	20	25	30
Volume of solution <b>T</b> added (cm <sup>3</sup> )							
Volume of solutions <b>S</b> + <b>T</b> (cm <sup>3</sup> )							
Temperature of mixture (°C)							

- (c) From the graph, determine:-  
(i) The volume of solution **T** required to react completely with solution **S**  
(ii) The highest temperature change,  $\Delta T$   
(d) Calculate the heat change for the reaction ;

- (Heat change =  $M \times 4.2 \text{Jg}^{-1} \text{ } ^\circ\text{C}^{-1} \times \Delta t$ , assume the density of the solution to be  $1 \text{g/cm}^3$ )
- (e) Calculate the number of moles of the sodium hydroxide solution T used in the experiment
- (f) Calculate the number of moles of the hydrochloric acid, solution S used in the experiment
- (g) Determine the heat of reaction per mole of hydrochloric acid, solution S
3. You are provided with solid U, carry out the test below. Record your observations and inferences in the table. Identify any gas(es) evolved .
- (a) Heat a spatula end full of mixture U in a test tube.
- (b) (Dissolve a part of mixture U in about  $10 \text{cm}^3$  of distilled water
- (c) Filter the mixture and retain both filtrate and the residue. Divide the filtrate into two portions.
- (i) To the first portion, add sodium hydroxide drop wise until in excess
- ii) To the second portion, add Potassium iodide solution
- (d) Divide the residue into two parts:-
- (i) Put one part in a test tube and add dilute nitric acid until the residue just dissolves
- (ii) Divide the resulting solution into two parts. To part one, add dilute sodium hydroxide solution drop wise until in excess
- (iii) To part two, add aqueous ammonia drop wise until in excess

## RACHUONYO DISTRICT

### **CONFIDENTIAL INSTRUCTIONS.**

In addition to common fittings, apparatus and chemicals found in the school laboratory.

*Each candidate requires:-*

1. *50.0ml burette*
2. *250ml pipette*
3. *Pipette filler*
4. *Two 25.0ml conical flasks*
5. *A clean metallic spatula*
6. *One boiling tube*
7. *A white tile/plain paper (white)*
8. *Eight clean dry test-tubes on a rack*
9. *1.5g of carbonate A- accurately weighed and placed in a stoppered test-tube*
10.  *$75 \text{cm}^3$  of  $0.1 \text{M}$  sodium hydroxide labeled C*
11.  *$75 \text{cm}^3$  of  $1 \text{M}$  hydrochloric acid labeled solution B*
12. *10ml measuring cylinder*
13. *One filter paper*
14. *A filter funnel*
15. *A glass rod*
16.  *$45 \text{cm}^3$  of  $0.42 \text{M}$  glucose, labeled X*
17.  *$130 \text{cm}^3$  of  $2.0 \text{M}$   $\text{H}_2\text{SO}_4$  labelled Z*
18. *10ml of  $0.04 \text{M}$   $\text{KMnO}_4$  labelled Y*
19. *Stop watch/stop clock*
20. *Thermometer ( $-10^\circ\text{C} - 110^\circ\text{C}$ )*
21. *100ml measuring cylinder*
22. *Solid K (about 2g)*
23. *Distilled water in a wash bottle*
24. *A 250ml volumetric flask (one)*
25. *Means of labeling (one)*

*Access to the following:-*

1. *Bunsen burner*

2. *Phenolphthalein indicator solution supplied with a dropper*
3. *Tripod stand and a wire gauze*
4. *2.0M NaOH supplied with a dropper*
5. *2.0M HCl*
6. *2.0M HNO<sub>3</sub> supplied with a dropper*
7. *0.5M BaCl<sub>2</sub> supplied with a dropper*
8. *Calcium hydroxide solution in a stoppered container*
9. *2.0M ammonia solution supplied with a dropper*
10. *0.05M potassium iodide solution supplied with a dropper*

**Preparation of chemicals**

- (i) *Solid A – Calcium Carbonate*
- (ii) *Solid K – Mixture of Lead (II) carbonate and sodium sulphate in the ratio 1:1*

1. **You are provided with:**

- 1.5g of metal Carbonate A
- 75cm<sup>3</sup> of 1M hydrochloric acid labelled B
- 75cm<sup>3</sup> of 0.1M sodium hydroxide labelled C

You are required to determine the molar mass of the carbonate

**Procedure I**

Transfer carefully all solid A into a clean 250ml volumetric flask. Add 50cm<sup>3</sup> of the acid labelled B into the flask containing the carbonate. Wait until the reaction is complete (No more effervescence takes place)

**Question 1.**

(a) Find the moles of hydrochloric acid present in 50cm<sup>3</sup> of solution B

**Procedure II**

When the reaction is complete, add 100cm<sup>3</sup> of distilled water to the contents of the flask and shake.

Add more distilled water to top the solution to the mark. Label it as solution D. Pipette 25cm<sup>3</sup> of solution D into a 250cm<sup>3</sup> of conical flask and titrate with solution C using 1 to 2drops of phenolphthalein indicator. Record your results in table 1 below. Repeat this procedure to obtain accurate values:

	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution C used (cm <sup>3</sup> )			

(b) Determine the average volume of solution C used

(c) (i) Calculate the volume of sodium hydroxide that would react with 250cm<sup>3</sup> of the diluted acid  
(ii) Calculate the moles of sodium hydroxide solution C in the volume obtained in c(i)

Above

- (d) Write down equation for the reaction between hydrochloric acid and sodium hydroxide
- (e) How many moles of hydrochloric acid are left after the reaction with the metal carbonate A
- (f) Calculate the moles of hydrochloric acid that reacted with 1.5g of the metal Carbonate A
- (g) (i) Write down the ionic equation between carbonate and hydrochloric acid  
(ii) Calculate moles of carbonate A  
(iii) Calculate the molar mass of the carbonate A

2. **You are provided with:-**

- 2.0M sulphuric (VI) acid solution, solution Z
- 0.42M glucose, solution X

- 0.04M potassium manganate (VII) solution **Y**

You are required to determine the rate of reaction between aqueous glucose solution and acidified potassium manganate (VII) at different temperatures.

**Procedure**

Place 1cm<sup>3</sup> of solution **Y** into a conical flask. Using a 100cm<sup>3</sup> measuring cylinder add 25cm<sup>3</sup> of solution **Z** to the conical flask containing solution **Y**. Warm the mixture to about 70°C. Stop warming and allow the mixture to cool. When the temperature is exactly 65°C add 7.5cm<sup>3</sup> of solution **X** and start the stop watch immediately. Stir the mixture with a thermometer and measure the time taken for the colour of the mixture to change from purple to colourless. Record the time in table 2 below also record the temperature at which the mixture turns colourless. Clean the conical flask and repeat the procedure at temperature of 60°C, 55°C, 50°C and 45°C instead of 65°C.

(a) Calculate  $1/\text{time}$  and complete the table

**Table 2**

(6mks)

Temperature before mixing (°C)	65	60	55	50	45
Temperature when solution becomes colourless (°C)					
Time in seconds					
$1/\text{time}(\text{s}^{-1})$					

(b) Plot a graph of  $1/\text{time}$  (y-axis) against the temperature at the point when the solution becomes Colourless

(c) From your graph, determine the time that the reaction would take if the temperature at which the solution becomes colourless is 52.5°C

(d) From your graph, determine the rate of reaction if the temperature at which the solution becomes colourless is 47°C

(e) Explain the shape of your graph

3. You are provided with mixture **K**. You are required to perform tests on the mixture in order to determine its composition. Record your observations and inferences in their spaces provided:-

(a) Place a spatula of **K** on a white tile and observe its appearance:-

(b) Place the remaining portion of **K** in a boiling tube and add 10cm<sup>3</sup> of distilled water.

Shake vigorously, filter and retain both the residue and filtrate

(i) Divide the filtrate into 3 portions. To the first portion sodium hydroxide drop-wise until excess

(ii) Dip one end of a metallic spatula in 2M HCl and heat it in a Bunsen burner flame for a few seconds and allow it to cool. Scoop a little of the solution from the second portion with the heated end of the spatula and place it as the hottest part of the non-luminous flame.

(iii) To the third portion add 3-4 drops of dilute HNO<sub>3(aq)</sub> followed by 3-4 drops of BaCl<sub>2(aq)</sub>

(c) Scrap the residue from the filter paper and place a half of it in a clean dry test tube.

Add about 3cm<sup>3</sup> of 2M HNO<sub>3</sub>. Test for any gas produced by use of calcium hydroxide solution on a glass rod. Preserve the solution for use in procedure (d) below:-

(d) Add about 3cm<sup>3</sup> of distilled water to the solution obtained in (c) above and shake to mix.

Divide the solution into 3 portions

(i) To the first portion, add sodium hydroxide drop-wise until in excess

(ii) To the second portion, add ammonia solution drop-wise until in excess

(iii) To the third portion, add 2-3drops of potassium iodide solution

**KAKAMEGA NORTH DISTRICT**

**CONFIDENTIAL**  
**INSTRUCTIONS.**

**You are provided with:**

- 25cm<sup>3</sup> of 0.2M Copper(II) sulphate solution
- 0.5g of metal **A**
- 0.5g of metal **B**
- One thermometer of -10 to 110°C range
- Two 100cm<sup>3</sup> plastic beakers

You are required to determine the molar enthalpy change for metal A and B and arrange them in order of reactivity

**Procedure**

1. a) Using the thermometer provided, take the initial temperature of copper (II) sulphate solution and record your results in table A below
- b) Add all the 0.5g of metal A into copper (II) sulphate solution; stir the mixture for about 5 minutes. Using a thermometer and record the final temperature (highest temperature) in table A below:

**TABLE A;**

Initial temperature of $\text{CuSO}_4(\text{aq})$ (C)	
Final temperature of $\text{CuSO}_4(\text{aq})$ (C)	
Temperature change T (°C)	

**Question 2;**

2. a) Using a thermometer take initial temperature of another 25cm<sup>3</sup> fresh sample of copper(II) sulphate solution in the plastic beaker and record your results in table B below;

**TABLE B;**

Initial temperature of $\text{CuSO}_4(\text{aq})$ (C)	
Final temperature of $\text{CuSO}_4(\text{aq})$ (C)	
Temperature change T (c)	

- a)
  - i) State and explain whether the reactions above between metals A and B with copper (II) sulphate are endothermic or exothermic
  - ii) Calculate the moles of copper ions present in 25cm<sup>3</sup> of 0.2M copper (II) sulphate solution
- b)
  - i) Calculate the enthalpy change that occurs when 25cm<sup>3</sup> of copper (II) solution reacts with metal A. (Specific heat – capacity of the solution =  $4.2\text{Jg}^{-1}\text{K}^{-1}$ , Density of the solution =  $1\text{g/cm}^3$ )
  - ii) Determine the molar enthalpy change for the reaction of copper (II) sulphate solution with metal **A**
- c)
  - i) Explain the significance of using powdered metals **A** and **B** in this experiment
  - ii) Record the colour of the powdered metals **A** and **B**
- d) State and explain major observations made when metal **A** reacts with copper (II) sulphate solution
- e)
  - i) Determine the molar enthalpy change for the reaction of metal B with 25cm<sup>3</sup> of 0.2 M copper (II) sulphate solution ( $C = 4.2\text{Jg}^{-1}\text{K}^{-1}$ , Density of solution =  $1\text{g/cm}^3$ , RAM of metal B= 65)
  - ii) Arrange metals **A** and **B** in order of reactivity beginning with the more reactive one. Give a reason for your answer

**Question 2****You are provided with;**

- Solution **C**, 0.1 M hydrochloric acid
- Solution **D**,  $\text{MOH}_{(\text{aq})}$  solution of unknown concentration
- Phenolphthaleine indicator

You are required to standardize solution **D** using solution **C** and to determine the value of M in the formula  $\text{MOH}_{(\text{aq})}$

**Procedure**

1. a) Pipette 25cm<sup>3</sup> of solution **D** into the conical flask. Using a dropper, add 2 drops

- of phenolphthaleine indicator to solution **D**  
 b) Fill the burette with solution **C** and correct to the “**O**” mark  
 c) Titrate solution **C** against solution **D**

2. Repeat procedure **1(a), (b)** and **(c)** twice and record your results in a table of results below;

**Table of results**

Experiment	I	II	III
Final volume of solution <b>C</b> (cm <sup>3</sup> )			
Initial volume of solution <b>C</b> (cm <sup>3</sup> )			
Volume of solution <b>C</b> used (cm <sup>3</sup> )			

- a) Volume of pipette used \_\_\_\_\_ cm<sup>3</sup>  
 b) Calculate the average volume of solution **C** used in this experiment  
 c) Calculate the number of moles of solution **C** used in this experiment  
 d) Given that solution **C** is hydrochloric acid while solution **D** is MOH (the base),  
 i) Write a chemical equation to show the reaction of solution **C** with **D**  
 ii) Write the ionic equation for the reaction of solution **C** with **D** in **d (i)** above  
 iii) From the reaction equation written in **d(i)** above, determine the moles of solution **D** that reacted with solution **C**  
 e) i) Determine the molarity of solution **D** (i.e. MOH<sub>(aq)</sub>) used in this experiment  
 ii) Given that 6016g of solid MOH<sub>(s)</sub> were dissolved in distilled water and made to 1 litre, calculate the relative molecular mass of MOH<sub>(s)</sub>  
 iii) From your answer in **e (ii)** above, determine the value of **M** in the formula MOH

Question 3.

You are provided with solid **E**. Carry out the following tests on solid **E** so as to try and find out the ions present in solid **E**

Complete the table below to show your observation and inference (conclusions)

Experiment	Observation	Inference
a) Observe solid <b>E</b> and record your findings		
b) Dissolve solid <b>E</b> in about $\frac{3}{4}$ of distilled water in a boiling tube and divide the solution into 5 portions in 5 test tubes		
i) To portion 1 add NaOH <sub>(aq)</sub> drop wise to excess		
ii) To portion 2 add NH <sub>3(aq)</sub> drop wise to excess		
iii) To portion 3 add a few drops of Ba(NO <sub>3</sub> ) <sub>2</sub> followed by few drops of dilute HNO <sub>3(aq)</sub>		
iv) To portion 4 add lead (II) Nitrate drop wise followed by dil. HNO <sub>3(aq)</sub>		
v) To portion 5 dip a looped nichrome wire to it and put the wire in the Bunsen flame		

## BUTERE DISTRICT

### CONFIDENTIAL INSTRUCTIONS

*Each student should be provided with:*

1. 100 cm<sup>3</sup> of solution M<sub>2</sub>
2. 80 cm<sup>3</sup> of solution M<sub>1</sub>
3. 50 cm<sup>3</sup> of solution M<sub>3</sub>

4. *Pipette (25 ml)*
5. *Burette (50 mls)*
6. *Methyl Orange indicator with a dropper*
7. *Two conical flasks*
8. *Filter funnel*
9. *Measuring cylinder (10 mls)*
10. *Measuring cylinder (50 mls)*
11. *Thermometer (-10 to 110<sup>o</sup>c)*
12. *100 mls plastic beaker*
13. *3 test tubes in a test tube rack*
14. *1 Boiling tube*
15. *Solid W. (One spatula full)*

**Access to:**

1. *2M NaOH(aq) with a dropper*
2. *2M NH<sub>3</sub> (aq) with a dropper*
3. *1M BaCl<sub>2</sub> with a dropper*
4. *2M HNO<sub>3</sub> with a dropper*
5. *Distilled water in a wash bottle*

**Note:**

1. *Solution M<sub>1</sub> is prepared by mixing 53g of Sodium Carbonate and 42g of Sodium Chloride solid and dissolved to make one litre solution.*
2. *M<sub>2</sub> is 1M Hydrochloric acid.*
3. *M<sub>3</sub> is 1M Sodium Hydroxide.*
4. *Solid W is Aluminium Nitrate*

1. You are provided with the following solutions:-
  - M<sub>1</sub> containing 95g of a mixture of sodium carbonate and sodium chloride per litre of solution.
  - M<sub>2</sub> which is 1M HCL.
 You are to determine the percentage of sodium chloride in the mixture.

**Proceed as follows:**

Pipette 25 cm<sup>3</sup> of M<sub>1</sub> and titrate with M<sub>2</sub> from burette using 3 – 4 drops of methyl orange indicator. Stop titrating when a permanent pink colour appears. Repeat the experiment and complete the table below.

**TABLE 1**

	I	II	III
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of M <sub>2</sub> used (cm <sup>3</sup> )			

- a) Determine the average volume of M<sub>2</sub> used. Show your workings.
  - b) Determine the number of moles of M<sub>2</sub> used.
  - c) Write down an ionic equation for the substances that react.
  - d) Determine the number of moles of the base used.
  - e) Calculate the concentration of sodium carbonate.
  - f) Determine the mass of sodium carbonate in 1 litre of the solution.  
(Na = 23, C = 12, O = 16)
  - g) Determine the percentage of sodium chloride in the mixture.
2. You are provided with the following solutions:-
    - 1 M HCl solution M<sub>2</sub>
    - 1 M NaOH solution M<sub>3</sub>

You are expected to determine the molar heat of neutralization of hydrochloric acid.

**Proceed as follows:**

Measure 23 cm<sup>3</sup> of M<sub>2</sub> and put in a 100 ml beaker. Measure its temperature and record in the table below under first column. By use of a measuring cylinder measure 5 cm<sup>3</sup> of M<sub>3</sub> and to M<sub>2</sub> in the beaker. Stir with the thermometer and record the final steady temperature. Continue adding 5 cm<sup>3</sup> at a time and recording the temperature till 35 cm<sup>3</sup> has been added, complete the table below.

a) **TABLE II**

Volume of M <sub>2</sub> added (cm <sup>3</sup> )	0	5	10	15	20	25	30	35
Temperature (°C)								

- b) Plot a graph of temperature (vertical axis) against volume of NaOH added.
- c) From your graph determine:-  
(i) Volume of 1M NaOH needed to neutralize 23 cm<sup>3</sup> of 1M HCl  
(ii) Rise in temperature  $\Delta T$ .
- d) Calculate the amount of heat evolved in the above reaction. Take specific heat capacity of solution to be 4.2. J/g/k, density of solution. 1g/cm<sup>3</sup>.
- e) Calculate the number of moles of HCl used.
- f) Hence determine the Molar heat of neutralization of hydrochloric acid.
3. You are given solid W. Carry out the tests below and answer accordingly.
- a) Take a spatula endful of W and put in a boiling tube. Add about 8cm<sup>3</sup> of water and shake. Keep the mixture for the tests below.
- b) To about 2 cm<sup>3</sup> of solution of W add sodium hydroxide (2M NaOH) drop wise till in excess.
- c) To about 2 cm<sup>3</sup> of solution W, add Ammonia solution (2M NH<sub>2(aq)</sub>) drop wise till in excess.
- d) To about 2 cm<sup>3</sup> of solution W, add about 5 drops of Nitric acid (HNO<sub>3(aq)</sub>) followed by 2 drops of Barium chloride.

**CONFIDENTIAL**  
**REQUIREMENTS**

*In addition to the equipment, apparatus and chemical found in the chemistry laboratory, each candidate will require the following:*

- ◆ *Solution P: about 100cm<sup>3</sup>*
- ◆ *Solution Q: about 50cm<sup>3</sup>*
- ◆ *Solution R: about 100cm<sup>3</sup>*
- ◆ *Distilled water*
- ◆ *100ml measuring cylinder*
- ◆ *One filter funnel*
- ◆ *One 25cm<sup>3</sup> pipette*
- ◆ *A clamp and stand*
- ◆ *Aphenolphalein indicator*
- ◆ *3 conical flasks*
- ◆ *White tile*
- ◆ *Solution F: about 30cm<sup>3</sup> of 1.0M sodium hydroxide solution*
- ◆ *A 10ml measuring cylinder*
- ◆ *A 100ml plastic beaker*
- ◆ *Means of labelling*
- ◆ *A 110°C thermometer*
- ◆ *Solid D, 0.5g Zinc Sulphate crystals*
- ◆ *Metallic spatula*
- ◆ *1 boiling tube*
- ◆ *5 clean dry test tubes*

- ◆ *Test tube holder*
- ◆ *Bench solutions supplied with droppers*
- ◆ *Dilute nitric acid solution, 2*
- ◆ *2M sodium hydroxide solution*
- ◆ *2M aqueous ammonia solution*
- ◆ *0.5M Barium nitrate solution*
- ◆ *0.5M Lead (ii) Nitrate solution*

**NOTES**

- (a) (i) *Solution P is prepared by dissolving 17.2cm<sup>3</sup> of concentrated hydrochloric acid in about 250cm<sup>3</sup> of distilled water and adding water to make 1litre of solution*
- (ii) *Solution Q is prepared by dissolving 64g of sodium hydroxide pellets in about 250cm<sup>3</sup> of distilled water and making it to 1litre of solution*
- (iii) *Solution R is prepared by dissolving 13.75cm<sup>3</sup> of concentrated sulphuric acid in about 250cm<sup>3</sup> of distilled water and making it to 1litre of solution*

(b) *Solid D is 0.5g of Zinc Sulphate crystals*

1. **You are provided with:**

- Solution **P**, 0.2 M hydrochloric acid
- Solution **Q**, sodium hydroxide solution
- Solution **R**, containing 49g/Litre of a dibasic acid, H<sub>2</sub>A

**You are required to:**

Dilute solution **Q** with distilled water

Standardize the diluted solution **Q** with solution **P**

Determine the relative formula mass of **A**

**Procedure 1:**

Pipette 25cm<sup>3</sup> of **Q** into a clean dry 250ml volumetric flask. Measure 175cm<sup>3</sup> of distilled water using a 100cm<sup>3</sup> measuring cylinder and add it to solution **Q** in the flask. Shake well. Label this as solution **S** and keep it for further tests in procedure I and II. Pipette 25cm<sup>3</sup> of solution **S** into a clean dry conical flask. Add 2 to 3drops of Phenolphthalein indicator and titrate with solution **P**. record your results in the table I below. Repeat the procedure to obtain accurate results.

**Table I**

Titration number	I	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution <b>P</b> used (cm <sup>3</sup> )			

- (a) Determine the average volume of solution **R** used
- (b) (i) Find the moles of solution **P** used to react with 25cm<sup>3</sup> of the diluted solution **S**.
- (ii) Find the moles of solution **S** in 25cm<sup>3</sup> of the diluted solution.
- (iii) Determine the number of moles of sodium hydroxide contained in the 100cm<sup>3</sup> of solution **S**
- (c) Using your results in b (ii) above determine the concentration in moles per litre of the original sodium hydroxide solution **Q**

**Procedure II**

Pipette 25cm<sup>3</sup> of the standardized solution **S** into a clean, dry conical flask. Empty your burette completely of solution **P** and rinse it with some water. Now, fill your burette with solution **R** and titrate with solution **S** in the conical flask containing 2 to 3 drops of Phenolphthalein indicator.

Record your results in table II below. Repeat the procedure to obtain accurate results.

**Table II**

Titration number	I	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Volume of solution R used (cm <sup>3</sup> )			

(d) Determine the average volume of solution **R** used

.....  
 (e) Determine the number of moles of Sodium hydroxide in 25cm<sup>3</sup> of solution **S** and hence the moles of solution **R** used

(f) Find the number of moles of **R** contained in one litre of solution

(g) Given that H= 1.0 :

(i) Find the relative formula mass of the dibasic acid H<sub>2</sub>A

(ii) Determine the relative formula mass of **A** in the formula H<sub>2</sub>A

2. **You are provided with:**

**1.0M** Sodium hydroxide solution **F**

**0.6M** solution of acid labelled **G**

You are required to determine the molar heat of neutralization of Sodium hydroxide with acid **G**

**Procedure:**

(a) Place six test tubes on a test rack. Using a 10cm<sup>3</sup> measuring cylinder measure 5cm<sup>3</sup> portions of solution **G** and place them in each of the tubes.

Measure 25.0cm<sup>3</sup> of solution **F** using a measuring cylinder and place it into a 100cm<sup>3</sup> beaker.

Measure the temperature of this solution **F** to the nearest 0.5°C and record in table **III**.

Pour the first portion of the 5cm<sup>3</sup> of solution **G** from the test tube into the beaker containing 25.0cm<sup>3</sup> of solution **F**. Stir the mixture carefully and record the highest temperature of the mixture in table **III**.

Pour the second portion of solution **G** immediately into the mixture in the beaker. Stir carefully and record the highest temperature of this mixture in table **III**. Continue this procedure using the remaining portions of solution **G** to complete table **III**.

**Table III**

Volume of G added (cm <sup>3</sup> )	0	5	10	15	20	25	30
Volume of F (cm <sup>3</sup> )	25	25	25	25	25	25	25
Temperature (°C)							

(b) On the grid provided, plot a graph of temperature (vertical axis) versus volume of solution **G** added

(c) From the graph, determine:

(i) The volume of solution **G** required to react with the 25cm<sup>3</sup> of sodium hydroxide solution **F**

(ii) The highest temperature change

(d) Calculate the heat change for the reaction

(Heat change = Mass x temperature change x 4.2Jg<sup>-1</sup>°C. Assume density of each solution to be 1gcm<sup>-3</sup>)

(e) Calculate the volume of sodium hydroxide solution **F**, used

(f) Calculate the molar heat of neutralization of sodium hydroxide solution **F**

3 **You are provided with** substance **D**, which contains two cations and one anion.

Carry out the test below on the substance. Enter your observations in the table below.

Write your observations and inferences in the spaces Provided

(a) Place a spatula end full of **D** in a boiling tube. Add about 5cm<sup>3</sup> of distilled water and shake.

- Divide the resultant mixture into 4 portions
- To the first portion, add Nitric acid followed by Barium nitrate solution.
  - To the second portion, add Nitric acid, followed by lead (II) Nitrate solution
  - To the third portion, add a few drops of sodium Hydroxide solution until in excess
  - To the fourth portion, add aqueous ammonia drop wise till in excess solution

## TRANS MARA DISTRICT

### CONFIDENTIAL INSTRUCTIONS

*Each candidate should have :*

- ✓ *80 cm<sup>3</sup> of solution T*
- ✓ *100 cm<sup>3</sup> of solution S*
- ✓ *Exactly 1.5g of solid V*
- ✓ *250cm<sup>3</sup> beaker (glass)*
- ✓ *1 label*
- ✓ *1 pipette*
- ✓ *1 burette*
- ✓ *100cm<sup>3</sup> measuring cylinder*
- ✓ *1.2g*
- ✓ *120cm<sup>3</sup> plastic beaker*
- ✓ *A stop clock /watch*
- ✓ *About 1.0g of solid J*
- ✓ *1 boiling tube*
- ✓ *1 metallic spatula*
- ✓ *1 glass rod*
- ✓ *5 test tubes*
- ✓ *1 filter paper*

### Access to:

- ✓ *Phenolphthalein*
- ✓ *2m lead (II) nitrate*
- ✓ *0.05 M sodium thiosulphate*
- ✓ *Distilled water*
- ✓ *20% volume hydrogen peroxide*
- ✓ *Source of heat ( Bunsen burner)*

### Notes:

- 20% 20 volume peroxide is prepared by diluting 20cm<sup>3</sup> of 20v hydrogen peroxide to make 100cm<sup>3</sup>*
  - solution T is 1.0 hydrochloric acid and is made by dissolution 86cm<sup>3</sup> of 35-37% hydrochloric acid diluted to 1litre of solution*
  - solution S is 0.5m sodium hydroxide*
  - solid V is exactly 1.5g of sodium carbonate ( anhydrous)*
  - solid J is potassium iodide*
  - solid M is 1.2g magnesium powder*
  - solution K is 0.02m copper (II) sulphate*
1. You are provided with the following :
- 1.0M Hydrochloric acid; solution T.
  - 0.5M sodium hydroxide; solution S

- Anhydrous sodium carbonate of unknown mass: solid **V**.

You are required to determine the mass of sodium carbonate that was used in the experiment.

**Procedure**

Measure 60cm<sup>3</sup> portion of 1M hydrochloric acid using a measuring cylinder and transfer it to 100cm<sup>3</sup> beaker. Add all sodium carbonate (solid **V**) to the acid in the beaker and stir gently. Leave the mixture for 3 minutes until there is no effervescence transfer the mixture into a clean 100ml measuring cylinder and add distilled water to make 100cm<sup>3</sup> of the solution. Transfer all the solution into 250cm<sup>3</sup> beaker and shake well, label this solution **W**.

Fill the burette with solution **S**.

Pipette 25.0cm<sup>3</sup> of solution **W** and transfer to a conical flask. Add 2-3 drops of phenolphthalein indicator and titrate with solution **S**. Record your results in table I below.

Repeat the titration to get two more concordant values.

Table I

Experiment	I	II	III
Final burette reading (cm <sup>3</sup> )			
initial burette reading (cm <sup>3</sup> )			
Volume of solutions <b>S</b> used			

Transfer the mixture into a clean 100ml- measuring cylinder and add distilled water to make 100cm<sup>3</sup> of the solution.

- Determine the average volume of solution **S** used.
  - Calculate the number of moles of sodium hydroxide (solution **S**) used.
  - Find the number of moles of hydrochloric acid in 25cm<sup>3</sup> of solution **W**.
  - Determine the number of moles of hydrochloric acid in 100cm<sup>3</sup>
  - Calculate the number of moles of hydrochloric acid in the original 60cm<sup>3</sup> of solution.
  - Calculate the number of moles of hydrochloric acid that reacted with sodium carbonate.
  - Determine the mass of sodium carbonate that reacted with the acid. (Na= 23, C= 12, O= 16).
2. You are provided with the following.
- 1.2g Magnesium powder, solid **M**
  - 0.02M copper (II) sulphate, solution **K**

You are required to determine the molar enthalpy of displacement for the reaction between magnesium powder and copper (II) sulphate solution.

**Procedure**

Measure out 100cm<sup>3</sup> of solution **K** into a plastic beaker.

Measure the temperature of this solution at every minute for four minutes. Add the entire amount of solid **M** to the contents of the plastic beaker at the fourth minute. Stir with the thermometer. Record the temperature after every half-a- minute in table II below.

Table II

Time (min)	0	½	1	1 ½	2	2 ½	3	3 ½	4	4 ½	5	5 ½	6	6 ½
Temp.(°C)														

- (a). Draw the graph of temperature ( $^{\circ}\text{C}$ ) against time,  $t$  (in minutes) ) Use your graph to get the temperature rise.
- (b). Calculate the heat lost by the solution  
(Specific heat capacity of solution =  $4.2\text{Jg}^{-1}\text{K}^{-1}$ , density of solution =  $1\text{g/cm}^3$ )
- (c). Write an ionic equation for the reaction.
- (d). Calculate the number of moles of :
- Copper (ii) ions in the original solution.
  - Magnesium added to the copper (ii) sulphate solution
  - Copper (II) ions displaced by magnesium powder.  
(Mg = 24, Cu = 63.5, S = 32, O = 16)
- (e). Calculate the molar heat of displacement of copper (II) ions by magnesium powder.
- (f). Comment on the value of the molar heat if iron powder had been used instead magnesium powder . Explain.
- (a). (i) You are provided with solid **J**.
- To the filtrate above, dip a clean metallic spatula and burn a drop of the filtrate on it with a non-luminous flame.
  - Divide the filtrate into two equal populations.
    - To the 1<sup>st</sup> portion add 2m lead (ii) nitrate.
    - To the second portion add 3 -5 drops of 20% 20 – Volume hydrogen peroxide
  - To the resulting mixture in (ii) above, add about  $1\text{cm}^3$  of sodium thiosulphate solution **Q**. From the tests carried out above identify.
    - Cation
    - Anion

## TRANSNZOIA WEST DISTRICT

### CONFIDENTIAL

### INSTRUCTIONS

#### ACCESS TO

- 1M NaOH
- 1M  $\text{NH}_4\text{OH}$
- 1M HCL
- 0.01m PB ( $\text{NO}_3$ )<sub>2</sub>
- Source of heat
- PH chart (PH=1 to 14)
- 10ml of solution **K**
- Sodium hydrogen carbonate

#### *Question 1.*

1. *Solution J*  $100\text{cm}^3$
2. *Burette*
3. *Solution K*  $100\text{cm}^3$
4. *Pipette*
5. *2 conical flasks*
6. *Filter funnel*
7. *Retort stand*

#### PREPARATION OF SOLUTIONS

1. Solution **J** - Dissolve 17g of ammonium iron (ii) sulphate in  $50\text{cm}^3$  of 2M  $\text{H}_2\text{SO}_4$  dilute to  $1\text{dm}^3$
2. Solution **K-KMnO<sub>4</sub>**. Dissolve 1.6g of potassium manganate vii in  $20\text{cm}^3$  of 2M  $\text{H}_2\text{SO}_4$  dilute to  $1\text{dm}^3$
3. Solution **R** - Dissolve 40g of sodium thiosulphate in  $1\text{dm}^3$  of solution

4. Solution **S** - Dissolve 172cm<sup>3</sup> of concentrated hydrochloric acid in 1dm<sup>3</sup> of solution
5. Solid **Y** is aluminium sulphate
6. Solid **Z** is oxalic acid.

1. **You are provided with:**

- Solution M<sub>1</sub> aqueous solution of a monobasic acid, HB containing 1.62425, of the acid dissolve in 250cm<sup>3</sup> of the solution
- 0.208M sodium hydroxide solution.

**You are required to determine**

- a) The molarity of the acid
- b) The RFM of the acid and the RAM of **B** in HB (H=1, C=12, O=16)

**Procedure**

Pipette 25cm<sup>3</sup> of solution M<sub>1</sub> into a clean dry conical flask. Add 2 drops of phenolphthalein indicators. Fill the burette with solution **Q** and titrate against solution M<sub>1</sub>

Repeat the procedure two more times and complete the table below:

	I	II	III
Final burette reading(cm <sup>3</sup> )			
Initial burette(cm <sup>3</sup> )			
Volume of solution <b>Q</b> used (cm <sup>3</sup> )			

- a) Determine the average volume of solution **Q** used
- b) Write an equation for the reaction between solution M<sub>1</sub> and **Q**

c) **Calculate:**

- i) The number of moles of **Q** used
- ii) The number of moles of M<sub>1</sub> used
- iii) The molarity of solution M<sub>1</sub>

d) **Determine;**

- i) The RFM of acid
- ii) The RAM of element **B**

2. **You are provided with:**

- 2M hydrochloric acid, solution M<sub>2</sub>
- Magnesium ribbon.

**You are required to determine;**

- i) The rate of the reaction between Hydrochloric acid and magnesium
- ii) The mass of 2cm of magnesium ribbon

**Procedure II**

Using a clean measuring cylinder, measure 60cm<sup>3</sup> of 2M hydrochloric acid, solution M<sub>2</sub> and place it into a clean conical flask. Cut a 2cm piece of magnesium ribbon provided and place into the conical flask containing 2M hydrochloric acid and immediately start the stop-watch. Measure and record the time taken for the magnesium ribbon to completely react with the hydrochloric acid in table II below. Repeat the procedure using 50, 40, 30 and 20cm<sup>3</sup> portions of 2M hydrochloric acid adding distilled water and complete the table below:

a) **Table II**

Experience	1	2	3	4	5
Volume of 2M HCl	60	50	40	30	20
Volume of distilled water added	0	10	20	30	40
Time taken for the ribbon to disappear(sec)					
1/time (sec <sup>-1</sup> )					

- b) Plot a graph of 1/t against volume of 2M hydrochloric acid used

- c) From your graph determine the time taken for the ribbon to disappear when 36cm<sup>3</sup> of 2M hydrochloric acid were used
- d) In terms of rate of reaction, explain the shape of your graph
3. You are provided with solids. You are required to carry out the tests shown below and write your observations and inference in the spaces provided. Identify any gases given out.
- Place a small amount of solid **S** in a dry test tube and heat strongly
  - Place a spatula end- full of **S** in a boiling tube. Add about 5cm<sup>3</sup> of distilled water and shake. Divide the resultant mixture into 4 portions
    - to the first portion, add nitric acid followed by Barium nitrate solution
    - To the second portion, add nitric acid followed by lead (II) nitrate solution. Warm the mixture
    - To the forth portion, add aqueous ammonia drop wise until excess
3. b) You are provided with solid **F**. Carry out the texts below. Write your observations and inferences in the space provided. Dissolve a spatula full of solid **F** in about 4cm<sup>3</sup> of distilled water and divide it into three parts.
- To 2cm<sup>3</sup> of solution, add 5 drops of bromine water
  - To the second portion add a spatula full of sodium hydrogen carbonate

### SOTIK DISTRICT

CONFIDENTIAL

1. **You are provides with;**
- Solution **M** (HCl)
  - Solution **N** (0.1M NaOH)
  - Solution **P** prepared by dissolving 14.3g/dm<sup>3</sup> of Na<sub>2</sub>CO<sub>3</sub>. x H<sub>2</sub>O.
  - Phenolphthalein indicator
  - Methyl orange indicator

**You are required to:**

- Standardize HCl solution **M**
- Determine the value of **X** in Na<sub>2</sub>CO<sub>3</sub>. XH<sub>2</sub>O

#### Procedure I

Fill the burette with HCl solution **M**. pipette 25cm<sup>3</sup> of NaOH solution **N** into a conical flask. Add 2 drops of phenolphthalein indicator and titrate until you obtain a permanent colour change. Record your results in table I below. Repeat the titration two more times and complete the table.

Table 1

Titration	1	2	3
Final burette reading (cm <sup>3</sup> )			
Initial burette reading (cm <sup>3</sup> )			
Vol. of solution <b>M</b> used (cm <sup>3</sup> )			

- What is the average volume of solution **M** used
- Calculate the number of solution **N** used
- Write the equation for the reaction that took place
- Calculate the number of moles of solution **M** in the titre volume
- Find the concentration of solution **M** in moles per litre
- Calculate the concentration of solution **M** in grams per litre

#### Procedure II

Fill the burette with HCL solution **M**. pipette 25cm<sup>3</sup> of solution **P** into a conical flask. Add 2 drops of methyl orange indicator and titrate against solution **M**. repeat the titration

two more times and complete the table.

**Table II**

<b>Titration</b>	<b>1</b>	<b>2</b>	<b>3</b>
Final burette reading			
Initial burette reading			
Vol. of solution <b>M</b> used (cm <sup>3</sup> )			

- What is the average volume of solution **M** used?
- Calculate the moles of HCl in the titre volume of solution **M**
- Write the equation for the reaction that took place
- Calculate the moles of solution **P** used
- Find the concentration of Na<sub>2</sub>CO<sub>3</sub>. XCH<sub>2</sub>O in solution **P** in moles per litre
- State the concentration of Na<sub>2</sub>CO<sub>3</sub>.XH<sub>2</sub>O in solution **P** in grammes per litre
- Find the R.F.M of Na<sub>2</sub>CO<sub>3</sub>.XH<sub>2</sub>O
- The value of **X** in Na<sub>2</sub>CO<sub>3</sub>. XH<sub>2</sub>O

2. **You are provided with;**

- 1.0M potassium iodide
- 1.0M lead (II) nitrate

You are required to use the two to determine the height of precipitate and the volume of Pb(NO<sub>3</sub>)<sub>2</sub> solution used.

**Procedure**

- Take six test-tubes of equal volume and label them **1** to **6**
- Run 5cm<sup>3</sup> of 1.0M Potassium iodide solution from a burette into each one of them.
- Add 1.0cm<sup>3</sup> of 1.0M Lead (II) nitrate solution to the test-tube labeled **1** and stir the mixture well with a glass rod.
- Add about 5 drops of ethanol to the mixture, stir and place it in test-tube rack.
- Add 1.5cm<sup>3</sup>, 2.0cm<sup>3</sup>, 2.5cm<sup>3</sup>, 3.0cm<sup>3</sup> and 3.5cm<sup>3</sup> of the 1.0M lead (II) nitrate to the test-tubes labeled 2, 3, 4, 5 and 6 respectively.
- Add about 5 drops of ethanol to each test-tube, stir and allow to settle
- Measure the height of the precipitate in each tube in (mm) and record the measurements in the table below:

<b>Test tube number</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>
<b>Volume of 1M lead (II) nitrate (cm<sup>3</sup>)</b>	1.0	1.5	2.0	2.5	3.0	3.5
<b>Height of precipitate (mm)</b>						

- Plot a graph of the heights of the precipitate against the volume of lead (II) nitrate solution added
- Calculate the;
  - Number of moles of KI in 5cm<sup>3</sup> of 1.0MKI solution
  - Number of moles of Pb(NO<sub>3</sub>)<sub>2</sub> solution which reacted completely with 5.0cm<sup>3</sup> of 1.0M KI
- How many moles of KI would react with one mole of lead (II) nitrate?
- Write a balanced chemical equations or the reaction between lead (II) nitrate and potassium iodide
- Give the ionic equation for the reactions
- What was the purpose of adding ethanol to the mixture?

## Answers section I & II

### 1. Introduction to chemistry

1. a) F is placed in the middle of the flame while G is placed at the upper region of the flame  
b) Non-luminous flame

2.  $\left. \begin{matrix} \cdot A, D, C, B \\ A, D, C, D \\ A, D, C \end{matrix} \right\}$  and C all correct  
correct answers are exclusive  
 $\frac{1}{2}$  mk otherwise penalize

3. a) The laboratory gas burns in excess oxygen  
OR burns completely or produces  $\text{CO}_2$  and  $\text{H}_2\text{O}$  only  
- No unburnt carbon remains  
OR No soot is formed// Produced.

4. a) a substance which when taken alters the body chemistry

b) - alcohol  
- Tobacco

5. (a) A - Downward delivery / upward displacement of air

B - Over water  $\checkmark \frac{1}{2}$

(b) A - Denser than air

6. (i) P - Hexane

(ii) W - Water

7. Name - Mortar.  $\checkmark \frac{1}{2}$

Use - Holding solid substances being crushed.  $\checkmark \frac{1}{2}$

Name - Crucible  $\checkmark \frac{1}{2}$

Use - Holding solid elements being heated strongly.  $\checkmark \frac{1}{2}$

8. T - has a very small hole which releases the gas in small quantities / in form of a jet.

U - It is heavy for stability

9. (a) It is very hot. (1 mk)  $\checkmark 1$

(b) The upper  $\checkmark 1$  part. Because all the gases undergo complete  $\checkmark 1$  combustion.  $\checkmark 1$  (2 mk)

10. The crystal dissolved  $\checkmark \frac{1}{2}$ . Blue colour spreads in water  $\checkmark \frac{1}{2}$ . The crystal broke up into smaller particles of copper (ii) sulphate and diffused in all direction } 3

11. (a) W has more energy levels than S.  $\checkmark 1$

(b) C has got (12) protons pulling the 10 electrons while A has 11 protons

2 pulling 10 electrons.  $\checkmark 1$

### 2. Simple classification of substances

1. a) X - melting point  $\checkmark \frac{1}{2}$

Z – Boiling point  $\sqrt{1/2}$

b) Its melting point is lowered and becomes less sharp due to the introduction of an impurity  $\sqrt{1}$

2. Luminous flame produces soot while non- luminous flame does not  $\sqrt{1}$   
Luminous flame is yellow in colour while non- luminous flame is blue in colour  
OR accept any correct answer

b) The luminous flame is moderately hot and is clearly visible hence no danger is posed

3. a) X

Gives the greatest number of spots hence the greatest number of pure substances  $\sqrt{1}$

b) The ink is made of more than one pure substance hence will also undergo chromatography

4. (a) sublimation

(b) Bleaching action

(c) Polymerization

5. Adds excess dilute hydrochloric acid/ sulphuric (vi) acid

Filter to obtain copper metal

Wash with distilled water

6. To separate samples of CUO and charcoal in test tubes, dilute mineral acid is added with shaking CUO black dissolves to form blue solution  $\sqrt{1/2}$

Charcoal does not dissolve in dilute mineral acids

7. a) Is the process for the separation of a mixture of solutes by their different rates of movement over a porous medium caused by moving solvent

b) - Separation of dyes

- To analyse and identify mixtures of substances which are difficult to separate by other means

- Used to analyze dyes in food colouring (Any two each one mark)

- 8 a) Element R – Sulphur

b) Mix solid P oxide with water

put blue and litmus paper, Blue litmus paper remains blue, red litmus paper changes to blue.

Put blue and red litmus papers in water

Blue changes to red, red remain red.

9. 5 and 4 BOTH MUST BE CORRECT

10. EITHER

- In separate test tubes, boil about 5cm<sup>3</sup> of each solution.

- Sodium hydrogencarbonate solution remains colourless forms no precipitate

- Calcium hydrogencarbonate solution changes from colourless to white precipitate

OR

HEAT must be mentioned or implied.

11. a)

b) Liquid

12. (i) Range of boiling points / no sharp boiling points

(ii) Carry out fractional distillation  $\sqrt{1}$

13. (i) *Evaporation*  
(ii) *Uses a lot of fuel*  
(iii) *Any soluble salt and water*
14. *Melting points is the specific  $\sqrt{1/2}$  constant temperature  $\sqrt{1/2}$  for a particular substance when a solid  $\sqrt{1/2}$  change to a liquid  $\sqrt{1/2}$*
16. (a) *To cool/condense vapour.  $\sqrt{1}$*  (1 mk)  
(b) *Water.  $\sqrt{1}$*  (1 mk)  
(c) *Blue solid  $\sqrt{1}$  changes to white solid.  $\sqrt{1}$*  (1 mk) } 3
17. (a) *Solvent front  $\sqrt{1}$*   
(b) *C  $\sqrt{1}$*
18. a) *Chemical  $\sqrt{1/2}$*   
b) *Physical  $\sqrt{1/2}$*   
c) *Physical  $\sqrt{1/2}$*   
d) *Chemical  $\sqrt{1/2}$*
19. - *Smoky/sooty  $\sqrt{1}$*   
- *Not hot enough  $\sqrt{1}$*
20. a) *Chemical  $\sqrt{1/2}$*   
b) *Physical  $\sqrt{1/2}$*   
c) *Physical  $\sqrt{1/2}$*   
d) *Chemical  $\sqrt{1/2}$*
21. - *Smoky/sooty  $\sqrt{1}$*   
- *Not hot enough  $\sqrt{1}$*
22. - *Boiling point*  
- *Melting point*  
- *Density*  
- *Refractive index*
23. i) *Pass the mixture of gases through concentrated sulphuric (vi) acid  $\sqrt{1/2}$  . Ammonia and ethane will dissolve  $\sqrt{1/2}$*   
- *Hydrogen  $\sqrt{1/2}$  being insoluble  $\sqrt{1/2}$  is then obtained*
24. a) i)  
ii) *A and C*  
b) *Since  $\text{NH}_4\text{Cl}$  sublimes but  $\text{CaCl}_2$  does not, sublimation process would do. Heat the mixture,  $\text{NH}_4\text{Cl}$  sublimes into vapour and condenses on the upper cooler parts of the test tube.  $\text{CaCl}_2$  remains at the bottom of the heating tube*  
c) i) *Fractional distillation*  
ii) *Separating funnel method 8*  
*Since the two liquids are immiscible pour the mixture into the separating funnel and allow to settle. The denser liquid will settle down and the less dense one will form the second layer on top. Open the tap and run out the liquid in the bottom layer leaving the second layer in the funnel*

25. (i) Condenser  
(ii) To indicate when a liquid is boiling, a thermometer reads a constant temperature  
(iii) A  
(iv) Ethanol  
Reason:- It has a lower boiling of 78°C compared to water with a boiling point of 100°C  
or - The liquid with the lower boiling point boils first and its vapours are condensed and the condenser to be collected as the first distillate  
(v) Fractional distillation  
(vi) - To separate components of crude oil  
- To isolate O<sub>2</sub> and N<sub>2</sub> from air  
- To manufacture spirits  
(vii)- They are immiscible liquids  
- They have different but close boiling points
26. (a) Wire gauze  
(b) Sodium chloride solution (or any named salt solution)  
(c) Evaporation
27. a) i) – Colourless liquid is seen on the cooler parts of the test tube. ✓1 mk.  
- Blue crystals change to a white powder. ✓1 mk
- ii) Water ✓1 which was originally water crystallization.  

$$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}(s) \longrightarrow \text{CuSO}_4(s) + 5\text{H}_2\text{O}(l) \quad \checkmark 1$$
- b) NaOH(s) absorbs water from the air and forms a solution. It is a deliquescent substance. ✓1  
Anhydrous CuSO<sub>4</sub> absorbs water from air to form hydrated Copper (II) sulphate which is blue but no solution is formed ✓1 it is hygroscopic
28. a) i) Ethanol, acetone (any organic solvent)  
ii) Its most soluble in the solvent and less sticky  
iii) - Cut out the yellow pigment  
- put in organic solvent to dissolve the pigment  
- filter and evaporate the filtrate to get the pigment  
iv) Above the red pigment and below the edge.
- b)-Heat the mixture aluminum chloride sublime and collect be cooler part of the tube and sodium chloride left at bottom of the tube  
- Scratch the condense AlCl<sub>3</sub> place in a beaker  
(c) Add cold water to the mixture, and stir to dissolve R. Filter to get solid S and V on residue . Evaporate the filtrate to get R. put S and in no water and stir to dissolve and filter to get S as residue evaporate filtrate to get V
29. Add cold water to the mixture, and stir to dissolve R. Filter to get solid S and V on residue . Evaporate the filtrate to get R. put S and in no water and stir to dissolve and filter to get S as residue evaporate filtrate to get V
30. Heat the mixture Ammonium chloride sublimes and is collected on the cooler parts. Add water to the remaining mixture, stir and filter. Lead (ii) Oxide remains as residue. Evaporate the filtrate to dryness to obtain sodium chloride
31. a) - Fractionating column must have beads  
- Wrong cold water circulation in the condenser  
b) T
32. a) Sublimation. ✓1 (3 mks)

33. b) Bleaching ✓1  
 c) Polymerisation ✓1
- 
- The diagram shows a rectangular TLC plate with a horizontal line at the bottom representing the origin. Five lanes are labeled A, B, C, D, and E from left to right. Lane A has three spots at different heights. Lane B has two spots. Lane C has one spot. Lane D has one spot. Lane E has two spots. A horizontal line at the top of the plate is labeled 'Solvent front'.

- (a) See Diagram above  
 - Solvent front should be slightly above the furthest pigment
- (b) C  
 - It contains only one pigment ✓<sup>1/2</sup>
34. - Add either to the mixture. Stir and filter  
 - Add alcohol to the residue, stir and filter  
 - Evaporate to filtrate to obtain C
35. - Black crystals changes directly into purple vapour ✓1  
 - The iodine crystals (sublimes) changed directly into a purple vapour without passing liquid state and changed back to black iodine crystals on the upper cooler parts of boiling tube ✓ (Correct colour must be stated 2 mks)

### 3. Acids, bases and combustion

- a) B  
 b) PH of potassium hydroxide is higher than that of aqueous ammonia. KOH ions are dissociated more than that of aqueous NH<sub>3</sub>
- (a) (i) X  
 (ii) W ✓ 1  
 (b) V ✓ 1
- a) Methyl Orange Red/Pink ✓<sup>1/2</sup>  
 Phenolphthalein Colourless/Pink ✓<sup>1/2</sup>  
 b) The PH of 0.1M KOH is higher than of 0.1M aqueous ammonia ✓1  
 KOH is strongly dissociated in solution. ✓1
- a) K  
 b)i) G  
 ii) I
- Copper (II) oxide is insoluble in water hence there are no OH<sup>-</sup> ions in the mixture
- a) S is acidic and would make the situation worse ✓<sup>1/2</sup>  
 b) Discovery of drugs processing and testing is the work of chemists. Chemists are professionals who have studied chemistry ✓<sup>1/2</sup>
- Its due to formation of insoluble Lead(II) carbonate hence preventing any further reaction.
- CaO is used in correcting soil acidity. ✓1
- (a) Pink ✓ 1  
 (b) 7.0 ✓ 1
- (a) alkali is soluble base. ✓1  
 (b) Because it is lighter than air. ✓1

11. (a)

Solution	Blue litmus paper	Indicator W
	BLUE	
	...RED.....	

(b) Phenolphthalein

12. a)-give inconsistent results ✓<sup>1/2</sup>

-expire shortly ✓<sup>1/2</sup>

b) I.

II. Maximum sports-award 1 1/2 mks

Fail any one- award

III W ✓<sup>1/2</sup> and Y ✓<sup>1/2</sup>

13. Sting of a bee is acidic ✓<sup>1</sup> and is neutralized by sodium hydrogen carbonate ✓<sup>1/2</sup> into a salt, carbon (IV) oxide and water. This gives pain relief. ✓<sup>1/2</sup>

14. (a) There was production of effervescence. The lemon juice contain an acid that reacts with the carbonate to produce carbon (IV) oxide.

(b) No production of bubbles. Copper is below hydrogen in the reactivity

15. (a) Yellow

Colourless ✓<sup>1/2</sup>

16. (i) K and M ✓ 1

(ii) K and M ✓

## Air and combustion

2. a)  $3Mg + N_2g \rightarrow Mg_3N_2g$

b) Argon

- It is inert

3. a) Rust is hydrated iron (III) Oxide

b) - Electroplating

- Painting

- Oiling

- Galvanization

c) - Salts

*- Acids*

4. a) Moles of copper  $\frac{8}{64} = 0.125$  moles of Mg  $\frac{3}{24} = 0.125$  Mg reacts with both O<sub>2</sub> and N<sub>2</sub> gases in the air while copper reacts with O<sub>2</sub> only  
There is greater change in the reaction with copper and smaller change in reaction with Mg
- b)  $\text{CuO}_{(g)} + \text{H}_2\text{SO}_{4(aq)} \longrightarrow \text{CuSO}_{4(aq)} + \text{H}_2\text{O}_{(l)}$   
Balanced  
Chemical symbols correct  
State symbols correct
5. a) Dust particles  
b) They readily solidify hence may block the pipes  
c) Argon
6. - Water rose up the test-tube to occupy the space of active air  $\frac{1}{2}$  which has been used in resting.  $\frac{1}{2}$   
- Iron wool turned reddish – brown  $\frac{1}{2}$  due formation of red-oxide of iron  $\frac{1}{2}$  which is rust.
7. a) i) rusting occurred  $\frac{1}{2}$   
ii) No rusting  $\frac{1}{2}$   
b) In (i) iron is more reactive than copper hence undergoes corrosion  $\frac{1}{2}$   
in (ii) zinc is more reactive than iron hence undergoes corrosion in place of iron  $\frac{1}{2}$
8. a) To remove any magnesium oxide coating from the surface of magnesium// To remove any oxide film on it  
b) White solid which is magnesium oxide  
c) Increase in mass was due to oxygen which combined with magnesium  
d)  $2\text{Mg}(s) + \text{O}_2(g) \longrightarrow 2\text{MgO}(s)$   
Penalize  $\frac{1}{2}$  for wrong or missing state symbols  
e) The filtrate is magnesium hydroxide which is an alkaline  
Red litmus paper changed blue, but blue litmus paper remained blue
9. (a) So that they may stick to the gas Jar to prevent them from falling into water when the gas jar is inverted  
(b) Iron filings turned to reddish brown because they reacted with oxygen in presence of moisture to form rust.  
- The level of water inside the gas jar rise so as to occupy the volume initially occupied by part of air used up for rusting  
(c) - Air is made up of two parts; - the active part that is necessary for rusting and the inactive part that is not used for rusting

- oxygen is the active part of air

- Neat diagram-

- correct method of collection

(e) - For cutting and welding metals

- Rocket fuel

- Mountain climbing

- Sea diving

- Used in explosions (any two)

10. a) To remove any magnesium oxide coating from the surface of magnesium// To remove any oxide film on it

b) White solid which is magnesium oxide

c) Increase in mass was due to oxygen which combined with magnesium

d)  $2\text{Mg(s)} + \text{O}_2\text{(g)} \longrightarrow 2\text{MgO(s)}$   
Penalize  $\frac{1}{2}$  for wrong or missing state symbols

e) The filtrate is magnesium hydroxide which is an alkaline  
Red litmus paper changed blue, but blue litmus paper remained blue

11. (i) Oxygen

(ii) Sodium hydroxide is a strong base

(iii) Slightly soluble in water

12. (i) White fumes form in the gas jar which disappear after sometime.

- The level of water rises in the gas jar.

(ii)  $\text{P(s)} + \text{O}_2\text{(g)} \longrightarrow \text{P}_2\text{O}_5\text{(s)}$

$\text{P}_2\text{O}_5\text{(s)} + 3\text{H}_2\text{O(l)} \longrightarrow 2\text{H}_3\text{PO}_4\text{(aq)}$

(iii) Magnesium react with oxygen and nitrogen hence greater of fraction of air is used.

(iv) (a) Blue litmus changed to red as remained red. The solution was acid due to phosphoric

(b) Red litmus changed to blue as blue remained blue due to formation of basic magnesium hydroxide ammonia solution.

(v) - Pass air over conc. KOH / NaOH to absorb  $\text{CO}_2$

- Pass the remaining gases over hot copper solid which reacts with oxygen.

- Collect the remaining gas over water. The gas is mainly nitrogen.

13. a) i)  $3\text{Mg(s)} + \text{N}_2\text{(g)} \longrightarrow \text{Mg}_3\text{N}_2\text{(s)}$   $\sqrt{1}$

ii) Gas with  $\sqrt{1}$  choking irritating smell.

$\text{Mg}_3\text{N}_2$  reacts with water to form ammonia  $\sqrt{1}$  gas.

iii) It remains blue.  $\sqrt{\frac{1}{2}}$  Ammonia gas is alkaline.  $\sqrt{\frac{1}{2}}$

14. (a) (i) Phosphorous

(ii) - Do not react with water when being inserted into the tube

- reacts with oxygen when exposed to air.

(c) (i)  $\frac{Y-X}{y} \times 100$

(ii) - Wrong reading of volume

- Phosphorous can go off before complete combustion

(d) (i) - Red litmus paper no effect

- Blue litmus paper turns red due to formation of phosphoric acid/phosphorous (V) Oxide which is an acidic oxide

(ii) - Oxygen

(iii) - Burning of candle

- Use of pyrogallol

- Rusting of iron fillings

ii) Phosphorous (v) or (iii) oxide formed is an acidic Oxide which dissolves in water to form a strong acidic solution of phosphoric acid whose PH is 2

16. (a) - Iron nails turns brown.

- Water rises up the delivery tube/water level drops in the trough ( any  $\frac{1}{2}mk$  )  $\frac{1}{2}$

Explanation: Oxygen has been used up in rusting of iron nails hence water rises up to take the place of oxygen

Or

18. a)  $N_2O$   $\sqrt{1}$  (Nitrogen (I) oxide) - Denitrogen Oxide.

b)  $K_2O$   $\sqrt{1}$  (Potassium oxide)

c)  $Al_2O_3$  (Aluminium oxide)

19. a) water  $\sqrt{1}$

## 5. Water and hydrogen

1. (a) Aluminium is above hydrogen in the reactivity series of elements

(b) (i) The reaction is too exothermic that alot of heat is produced causing ignition of hydrogen in presence of oxygen

2.

3. a) **Calcium chloride**  
**Drying agent**

4. (i) **Steam**

(iii) **Gas P is passed through the combustion tube before heating is commenced**

b) – Turns anhydrous white paper ✓½ copper (II) sulphate into blue. ✓½ Or

– Turns anhydrous blue ✓½ cobalt (II) chloride into pink. ✓½

6. a)

b) reverse steam ✓1

7. (a) **N**

8. (a)

S.S ✓ ½

9. (a)  $Zn(s) + 2HCl(aq) \longrightarrow ZnCl_2(aq) + H_2(g)$  ✓1

(b) **Concentrated sulphuric (IV) acid or anhydrous calcium chloride.** ✓1

(c) Copper cannot displace hydrogen from its solution. ✓1

(d) (i)  $2\text{H}_2(\text{g}) + \text{O}_2(\text{g}) \longrightarrow 2\text{H}_2\text{O}(\text{l})$  ✓1

(ii) Before: Pass hydrogen / through the tube before lighting ✓1 to drive off air.

End: There should be a continuous flow of hydrogen after / putting off the flame to avoid an explosion. ✓1

(e) – Filling balloons ✓1

- Manufacture of margarine.

- Manufacture of ammonia.

- Conversion of coal to synthetic petrol.

(f)  $\text{Zn}(\text{s}) + \text{H}_2\text{O}(\text{g}) \longrightarrow \text{ZnO}(\text{s}) + \text{H}_2(\text{g})$  ✓1

(g) S, ✓½ P, ✓½ Q, ✓½ R, ✓½

(h) It adds to unsaturated oils and hardens them. ✓1

10. a) i) Heating of copper (ii) Oxide to be shown on the diagram  
ii) To drive out air because mixture of air and hydrogen is explosive when lit  
iii)  $\text{CuO}(\text{g}) + \text{H}_2(\text{g}) \longrightarrow \text{Cu}(\text{g}) + \text{H}_2\text{O}(\text{g})$   
(penalize ½ mark for wrong S.S)  
iv) To prevent re-oxidation of hot copper by the atmospheric oxygen  
v) Reducing agent  
vi) Black copper (ii) Oxide turns to brown showing that copper (ii) Oxide has been reduced to copper  
vii) Zinc is more reactive than hydrogen and therefore cannot be reduced by hydrogen
11. (a) Hydrogen gas  
(b) - Calcium react with water forming calcium hydroxide solution  
- Calcium hydroxide solution dissociates to produce calcium ion ( $\text{Ca}^{2+}$  ions) and hydroxide ( $\text{OH}^-$ ) ions responsible for basic properties.

## 6. Structure of the atom and the periodic table

1.  $\text{Na}_2\text{CO}_3 + 2\text{HNO}_3 \longrightarrow 2\text{NaNO}_3(\text{l}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$

Mole ration 1 : 2

a) Moles of  $\text{HNO}_3$  in  $20\text{cm}^3 = 20/1000 \times 0.25$   
 $= 0.005$  moles

b) Moles of  $\text{Na}_2\text{CO}_3$  in  $25\text{cm}^3 = \frac{1}{2}$  of 0.005 moles  
 $= 0.0025$

c) If  $25\text{cm}^3 = 0.0025$  moles  
in  $250\text{cm}^3 = ?$

$$\frac{250 \times 0.0025}{25}$$

$= 0.025$  moles

RFM of  $\text{Na}_2\text{CO}_3 = 106$

1 mole of  $\text{Na}_2\text{CO}_3 = 106\text{g}$

0.025 moles = ?

$$\frac{0.025 \times 106}{1}$$

$= 2.65\text{g}$  of  $\text{Na}_2\text{CO}_3$

2. (a) A = 2.8.1

B = 2.1

(b) B

Strong attraction of the outermost energy level electron to the nucleus make it difficult to remove This is due to smaller atomic radius compared to A

Or - Outermost electrons are closer to the nucleus hence higher force of attraction

3. 
$$R.A.M = \frac{(62.93 \times 69.09) + (64.93 \times 3091)}{100}$$
$$= \frac{4347.834 + 2006.99}{100}$$
$$= 63.5482$$
$$\approx 63.5$$

4. (a) 
$$R.A.M = \frac{(33 \times 2) + (30 \times 1)}{3} \checkmark 1$$
$$\frac{99}{3} = 33 \checkmark 1$$

(b) Number of electrons of C = 57-31 = 26

Number of electrons of B is the same as for C = No. of Protons

5. 
$$\frac{69.09 \times 62.93}{100} + \frac{30.91 \times 64.93}{100} \checkmark 1^{1/2}$$
$$43.4783 + 20.0698 \checkmark 1$$
$$= 63.548 \approx 63.55 \checkmark 1$$

6. 
$$\frac{63x + 65(100-x)}{100} = 63.55$$

$$63x + 6500 - 65x = 6355$$

$$2x = 6355 - 6500$$

$$2x = -145$$

$$x = 72.5$$

% abundance of  $^{63}M = 72.5\%$

$^{65}M = 27.5\%$

7. a) Valency of G is 3

b) G is a group 3 element

8. a) i) 11 protons

ii) 16 protons

b) Formula of compound = T<sub>2</sub>Z

$$\text{Mass number of T} = 11 + 12 = 23$$

$$\text{Mass number of Z} = 16 + 16 = 32$$

$$\text{Formula Mass of T}_2\text{Z} = (23 \times 2) + 32 = 78$$

c) - When molten

- When in aqueous solution

9. Silicon (iv) Oxide has giant atomic structure with strong covalent bond holding the atom together. These require a lot of energy to break, hence it has high melting point. Carbon (IV) Oxide has simple molecular structure with weak Van Der Waals forces holding the molecules together which require little energy to break, hence sublimes at low temperature and is a gas at room temperature and pressure

10. O<sub>2</sub> 2.8 O 2.6

The oxide ions has 2 extra electrons that causes greater electron repulsion than in oxygen atom

11. To separate samples of CuO and charcoal in test tubes, dilute mineral acid is added with

shaking CuO black dissolves to form blue solution  $\checkmark \frac{1}{2}$

Charcoal does not dissolve in dilute mineral acids

12. 
$$\frac{(90 \times 8) + 10Q}{100} = 28.3 \quad (\frac{1}{2}mk)$$

$$100 \times \frac{2520 + 10Q}{100} = 28.3 \times 100$$

$$2520 + 10Q = 2830 \quad (\frac{1}{2}mk)$$

$$10Q = 2830 - 2520$$

$$10Q = 310$$

$$Q = 31$$

Electron arrangement of X = 284  $(\frac{1}{2}mk)$

Atomic No. = 14  $(\frac{1}{2}mk)$

No. neutrons = 31 - 14 = 17  $(\frac{1}{2}mk)$

13.  $L_3$  has delocalised electrons while the others has less

14. (a) Is a constant temperature at which a solid changed to a liquid/ A point at which a solid changes to a liquid which a solid changes to a liquid without change in temperature.

15. (a) P  $\checkmark$  and S  $\checkmark$   $\checkmark$

They have the same atomic numbers.  $\checkmark$  } Both must be there to score 3

(b) 4 (7, -3)  $\checkmark$

16. a) B  $\checkmark$  - its ion has a stronger nuclear charge than that of A  $\checkmark$

b) D  $\checkmark$  - has the weakest nuclear charge as compared to the other non- metals  $\checkmark$

17. (a) CA  $\checkmark$

(b) (i) E  $\checkmark$

(ii) B  $\checkmark$

(c) Period 3,  $\checkmark$  Group 2,  $\checkmark$

(d) (i) The atomic radius of F is greater than that of C  $\checkmark$  because F has more energy levels.

(ii) The atomic radius D is smaller than that of C  $\checkmark$  because of increased positive charge in the nucleus which attracts the electrons more.  $\checkmark$

(e) (i) Electrovalent bond  $\checkmark$

(ii) Covalent bond  $\checkmark$

(f) (i)  $4C + O_2 \longrightarrow 2C_2O$   $\checkmark$

$G + O_2 \longrightarrow GO_2$   $\checkmark$

(ii)  $C_2O$  is basic while  $\checkmark$

$GO_2$  is acidic.  $\checkmark$

18. (a) B - ammonia gas  $\checkmark$

C - nitrogen (II) oxide (NO)  $\checkmark$

E - water  $\checkmark$

F - unreacted gases  $\checkmark$

(b) The mixture of ammonia and air is passed through heated/ catalyst where ammonia (II) is oxidized to nitrogen (II) oxide.  $\checkmark$

(c) Gases are cooled and air passed through heated/ catalyst where ammonia is further oxidized to nitrogen(IV) oxide.  $\checkmark$

(d) Fractional distillation,  $\checkmark$

Water with a lower boiling point  $\checkmark$  than nitric (V) acid, distills left leaving the concentrates acid.

19. (a) (i) C  $\checkmark$

(ii) D or E  $\checkmark$

(iii) F  $\checkmark$

- (iv) D or E
- ✓ (v) A
- ✓ (vi) D

(b) Atomic radius of Y is smaller than that of X. The effective nuclear charge in Y is greater than in X hence outer electrons strongly pulled to the centre reducing the radius. ✓ 1/2

(b) (i) ✓ 1/2

(ii) Period – 3 ✓ 1/2 Group – IV

(c) (i) On the grid (period 2 Group 7)

✓ (ii) Halogen

(iii) – Used in hospitals with patients with breathing difficulties

- Used by mountain climbers and deep sea divers

(iv) Basic

20. A (i) P – ionic configuration - 2  
 - Formula of oxide – PO  
 Q – Atomic number – 20  
 R – Atomic number – 19  
 T – Ionic configuration – 2.8.8  
 Formula of oxide – TO<sub>2</sub>

(ii) R – Has the largest atom with one outer electron hence easily loses it.

(iii) S – is the smallest atom of a non-metal with a deficit of only one electron hence easily gains.

(iv)

(v) T is insoluble – It has a molecular structure/non-metal

(B)(i) It is coated with an un reactive layer of aluminium oxide which prevents it from reacting.

(ii) Valency – The number of electrons an atom gains or loses during a reaction.

Oxidation number – The resultant charge of an atom has after gaining or losing electrons.

21. a)  $+3 + P = (-2 \times 3) = 0$   
 $+3 + P - 6 = 0$

$$P = +3 \checkmark$$

b) Mg- its oxidation state increases from Zero to +2 ✓ 1 mark

22. a) Group 1 – Because ✓ 1/2 it has 1 electron in its outermost energy level.

Group 7 – It requires ✓ 1/2 1 electron to fill its outermost energy level.

b) Alkaline earth metals ✓ 1

c) PV<sub>2</sub> ✓ 1

d) Q has higher ✓ 1/2 m.p than J. Q has a giant metallic structure and strong metallic bonds. ✓ 1/2

While J has molecular structure and Vander

Waals forces which are easy to break. ✓ 1/2

e) R. ✓ 1

g)

h) – Filling electric light bulb ✓/1 accept any other correct one.

23. (a) (i) X Rj: If actual symbols are given.

(ii) Q. Rj. Actual symbols.

Explanation: It loses the outermost energy level most readily.

(iii) Halogens

(iv) I). Moving across a period there is increased nuclear charge.

II). Going down a group the energy levels increase in number.

(v) V- Explanation It has a complete outermost energy level/ Has a stable octet.

(vi) Z<sub>2</sub>R Rej. Interchange of letters, RZ<sub>2</sub>.

24. a) i) I S ✓/1- It readily gain one electron on ionization ✓/1  
II Q - It readily give out one electron on ionization ✓/1

ii) Alkali metals ✓/1

iii) WS<sub>3</sub> ✓/1

iv) Bond - covalent ✓/½

Structure – Giant atomic structure ✓/½

v) It is stable. Cant remove nor add electrons on its outermost energy level

vi) T has a smaller radius than Q because it has fewer energy levels than Q

25. The melting point increases from A to C this is due to increase in number delocalized electron hence increase in the strength of metallic bond.

D forms a giant structure with strong covalent bonds. Hence high melting.

It exhibits allstrophy ie may exist as two different form in the same state.

C<sub>2</sub> (SO<sub>4</sub>)<sub>3</sub>

Noble gases or inert

Used in filament bulbs

Used to produce an inert atmosphere in high temperature inetallurgical processes e.g welding.

C is amphoteric oxide

F acidic it is non –metal oxide.

Ethene

Acidified potassium Manganate VI abromine water it from a colourless solution

Nickel catalyst

26. a) 2 : 8  
b)  $W_2O_3$
27. i) Delocalized electrons  
ii) Mobile ions  
iii) Mobile ions
28. - Sodium has a larger radius than aluminium  
- Aluminium has more protons than sodium hence a more effective nuclear charge than sodium
29. a) 2.5  
b) Q Group 1  $\checkmark$ , Period 4  $\checkmark$   
R Group 2  $\checkmark$ , Period 3  $\checkmark$
30. Ethanol contains molecules  $\checkmark$  which are not  $\checkmark$  responsible for electrical conductivity. (2 mks)
31. a (i) Q  
(ii) R
32. (a) K and N because they have the same number of electrons on their outermost energy level  $\checkmark$   
(b)  $L_2O_7$   
(c)  $L_1$  because it has 7 electrons on the outermost energy level or reacts by gaining electrons or the ionic radius is larger than the atomic radius ( $\checkmark$ ) (1/2mk)
33. a) Formula;  $J_5G_2$   $\checkmark$   
b) E form ionic structures due to ionic bonding in its oxide. While G form molecular structure due to covalent bonding in its oxide

## Chemical families

1. a) - Non-metallic group  
- Ionic radius larger than atomic radius  
b) X – has smallest atomic radius hence more electronegative
2. To prevent filament from burning out. Provides an atmosphere in which burning cannot occur i.e. inert atmosphere
3. a) Halogens  
(b) X & Y  
(c) Z is the largest atom with the highest number of energy levels occupied by electrons.  
The longer an atom is the higher the forces of attraction that hold the molecules of the element together  
(d)  $3Z(g) + 2Fe(s) \longrightarrow FeZ_3(s)$   
(e) The blue litmus paper turned red that bleached. This is because it dissolves in water to form an acid and bleaching solution of  $HO^-$
4. (i) Down the group an extra energy level is added  
(ii) In group x elements form ions by ionizing the outer energy levels  
(iii) Across the period an extra proton is added which increased the nuclear attraction force  
(iv)  $BF_2$   
(v) – Ionic /electrovalent  
- Involves losing & gaining of electrons  
(vi) G, F, E  
- E has smallest atomic radius hence protons can attract an electron easier than in G
5. R – has the smallest atomic  $\checkmark$  size hence its outermost electrons are more strongly held to the nucleus resulting in high  $\checkmark$  value of ionization energy
6. - Add dilute nitric acid to lead (u) carbonate  
 $PbCO_3(s) + 2HNO_3(aq) \longrightarrow Pb(NO_3)_2(aq) + CO_2(g) + H_2O(l)$   $\checkmark$   
- React the resulting solution with solution of sodium sulphate i.e

- Filter to obtain lead (u) sulphate as residue.  $\checkmark\frac{1}{2}$
- Dry the salt of lead (u) sulphate in between the filter papers or in sunshine.  $\checkmark\frac{1}{2}$

7. a) Is one of the atoms of the same element having a different mass number from the rest, but same atomic number with others of the same element

$$b) \frac{92.2 \times 28}{100} \checkmark\frac{1}{2} + \frac{4.7 \times 29}{100} \checkmark\frac{1}{2} + \frac{3.1 \times 30}{100} \checkmark\frac{1}{2} = 28.11 \checkmark\frac{1}{2}$$

8. a) Alkaline earth metals  $\checkmark 1$

b) P has the smallest atomic radius due to electrons of P are closest to the nucleus  $\checkmark 1$

## Structure and bonding

1. Ethanol contains molecules  $\checkmark 1$  which are not  $\checkmark 1$  responsible for electrical conductivity

2. a) A covalent bond is formed by equal contribution of the shared electrons by the atom.  $\checkmark 1$   
Co-ordinate bond is where the shared electrons are contributed by one of the atoms.  $\checkmark 1$

3. a) Have delocalized valency electrons  $\checkmark 1$

b) Aluminium is a better conductor/Aluminium has three delocalized electrons while magnesium has 2.  $\checkmark 1$  It is resistant to corrosion.

4. In addition to vander waals forces, strong hydrogen  $\checkmark$  bonds exist in ethanol. These bonds require  $\checkmark$  more energy to break.

5. a) Is a covalent bond in which the shared pair of electrons comes from the same atom

6. Magnesium has more delocalized electrons than sodium

7. (a) Phosphorous chloride ( $\text{PCl}_3$ )

(b) Hydroxonium ion ( $H_3O^+$ )

8. Aluminium – it has more delocalized (3) electrons than copper (2 e-)
9. Hydrogen chloride has got only Van der waal while water has H-bonds in addition to Van der waal forces which are stronger
10. It contains white hoe carbon particles ( $\frac{1}{2}mk$ ) that allow to give out light ( $\frac{1}{2}mk$ ). When those particles cool down ( $\frac{1}{2}mk$ ) they turn black and settle down as soot. ( $\frac{1}{2}mk$ )
11. Aluminium chloride hdrolyses  $\sqrt{1}$  in solution producing hydroxonium ions  $\sqrt{\frac{1}{2}}$  which turn blue litmus paper red.  $\sqrt{\frac{1}{2}}$
12. Silicon (IV) oxide forms giant  $\sqrt{1}$  atomic structure of strong covalent  $\sqrt{\frac{1}{2}}$  bonds having high melting point. Carbon (IV) oxide is simple molecular substance of weak intermolecular  $\sqrt{\frac{1}{2}}$  attraction forces  $\sqrt{1}$  9the Van der Walls' forces) that have low melting point.
13. i) A:  $2,4\sqrt{\frac{1}{2}}$   
B:  $2,7\sqrt{\frac{1}{2}}$
14. (a) Because aluminium  $\sqrt{1}$  has more delocalized  $\sqrt{1}$  electrons than magnesium.  
(a) It does not corrode.  $\sqrt{1}$
15. Magnesium oxide has a giant ionic  $\sqrt{\frac{1}{2}}$  structure while silicon (iv) Oxide has a giant atomic structure. Mg O in molten state  $\sqrt{\frac{1}{2}}$  contains delocalized ions  $\sqrt{\frac{1}{2}}$  which conduct electricity while  $S_1O_2$  has no ions present  $\checkmark$
16. a) i)  
ii) At 25C, sodium chloride is in solid form. Ions cannot move. Between 801 and 1413C sodium chloride is in liquid state, ions are mobile
- b) Both ammonia and water are polar molecules and hydrogen bonds are formed
- c) N \_\_\_\_\_ H // co-ordinate bond / Dative bond
- d) i) Allotrope  
ii) Add methylbenzene to soot in a beaker. Shake and filter. Warm the filtrate to concentrate it. Allow the concentrate to cool for crystals to form. Filter to obtain crystals of fullerene  
iii)  ${}^{720}_{12} = 60$
17. (a) (i) NaCl has mobile ions in molten state and in aqueous solution  
(ii) Graphite has delocalized electrons in the structure which carry electric current
18. (i) I) C Reason:- Good conductor of electricity in both molten and solid state..
- II) D-Its melting point is below room temp. and boiling point above room temp.
- (ii) It exist in allotropic form.  
(iii) A conducts electricity by use of mobile ions while C conducts by use of delocalized electrons.  
Both must be correct for the 1 mk.
19. I (a)  $2Na(s) + 2CH_3CH_2OH(l) \longrightarrow 2CH_3CHONa(aq) + H_2(g)$

(b) Mole ratio b/w Na: H = 2:1

$$\text{Mole of Holes } H_2 = \frac{1200\text{cm}^3}{2400\text{cm}^3} \\ = 0.05\text{moles}$$

$$\text{Moles of Na} = 0.05 \times 2 \\ = 0.1\text{moles}$$

$$\text{Mass of Na} = 0.1 \times 23 \\ = 2.3\text{g of sodium}$$

(c) Mole ratio  $C_2H_5OH:H_2$

$$\text{Moles of } C_2H_5OH = 0.05 \times 2 \\ = 0.1\text{moles}$$

$$\text{mass of } C_2H_5OH \text{ reacted} = 0.1 \times 46 \\ = 4.6\text{g}$$

$$\text{Mass evaporated} = 50 - 4.6 \\ = 45.4\text{g of } C_2H_5OH$$

(d) – Has molecular structure – with hydrogen bonds being molecules

While -  $C_2H_5ONa$  – has giant ionic structure with ionic bonds

(a) Water

(b) In ethanol – sinks in water and stream of bubbles observed /seen

While in water – floats on water and darts on water

- Hissing sound is heard (any two)

20. (a) ionic or electrovalent

F is metal and H is non metal.

b) (i) J atomic radius decrease a long a period from left to right nuclear charge attraction increase positive nuclear charge increase due to increase in the number of protons.

(ii) F has a smaller atomic radius than N level down the group.

c) W is group 5 period 3

d) Transition metals.

e) J has 3 valence electrons which are delocalized while Q has only 2 electrons : hence J has high electrical conductivity due to high number of delocalized electrons.

f) The reactions have both metallic and non metal properties

g) H is more reactive than M non metal reactivity increases up the group due to decrease in electronegativity down the group.

21. (a) (i) Ionic bond

Y loses that is gained by Z

(ii) Atomic radius of A is larger than that of B has higher nuclear charge than A Electrons in B are drawn closer to the nucleus (1/2mk)

(iii) Z is more reactive than B

Z has a smaller atomic radius so will readily attract extra electron

(b) (i) Energy needed to remove an electron from an atom in gaseous state

(ii) R has a largest atomic radius; (1/2mk)

Therefore the electron is easily lost

(iii) Reacts vigorously with water producing gas bubbles that give the hissing sound and propels the metal

The metal floats on water as it is light

22. a) i)

Atomic number	Oxide formula	State at RT
N-12	$P_2O_3$	Q - solid
R- 15	$R_2O_5$	S- Gas

ii) The atomic radius decreases across the period from M to V. Due to increasing nuclear charge// increasing number of protons which pulls the outermost electrons closer to the nucleus

iii) Element V is chemically stable// stable electronic configuration does not gain or loss// share electrons with oxygen to form an oxide

b) i)

Oxide	Structure	Bond type
No	Giant ionic	Ionic/ electro valent
TO <sub>2</sub>	Simple covalent/ molecular	Covalent

( $\frac{1}{2}$  mark each – total 2 marks)

c) i) P is a metal with valency electrons free to move but T is a non- metal// molecular has no free valency electrons// molecules are electrically neutral

ii) Amphoteric oxide

23. (i) Period 2 its electronic arrangement is 2,3, or it has two energy levels.

- Accept shells or orbitals in place of energy levels

(ii) I- Across a period nuclear charge increases from, left to right exerting greater pull/attraction on available electrons

II-A<sub>4</sub> gains an electron and the incoming electron is repelled by other electrons or electron cloud increases

(iii) A<sub>2</sub>

24. a) P<sub>2</sub>Q ✓ reject QP<sub>2</sub>

25. (i) Ice : Bonding :- Covalent  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk  
Structure :- Simple molecular  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk } 2

(ii) Magnesium chloride : Bonding :- Ionic  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk  
Structure: - Giant ionic  $\frac{1}{2}$  mk

26. (i) Ice : Bonding :- Covalent  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk  
Structure :- Simple molecular  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk } 2

(ii) Magnesium chloride : Bonding :- Ionic  $\checkmark \frac{1}{2}$   $\frac{1}{2}$  mk  
Structure: - Giant ionic  $\frac{1}{2}$  mk

27. (a) Zinc oxide  $\checkmark 1$  ZnO (1 mk)  
(b) ZnO<sub>(s)</sub> + H<sub>2</sub>SO<sub>4(aq)</sub>  $\checkmark 1$   $\xrightarrow{\quad}$  ZnSO<sub>4(aq)</sub> + H<sub>2</sub>O (1 mk) } 3

(1 mk)

28. (a)

29. Diamond has giant atomic structure in each carbon atom ✓ ½ is bonded to four other ✓ ½ carbon atoms arranged in regular tetrahedron shape in all direction forming rigid (strong) ✓ ½ mass of atoms due to uniformity of covalent bonds between the atoms ✓ ½ (2mk)

30. 3 Covalent ✓ 1 bonds and one dative ✓ 1 bond

31. -  $CB_2$

- Ionic bond

32. (a) Covalent bond is bond between non-metal atoms where shared electrons are donated equally by all the atoms involved.

Dative bond is a bond in which shared electrons are donated by one atom.

(b) The presence of triple bond in nitrogen requires very high temperatures to break

33. (i)

✓ 1

- award 1mk if one Hydrogen two electrons donated by nitrogen
- 0mk if all hydrogen atoms shares electron with nitrogen

- award full mark if Silicon and Hydrogen shares electrons

34. (a) Chlorine (I) Oxide ✓ ½

- (b) -  $\text{Na}_2\text{O}$  has stronger ionic bond between ions in it, while  $\text{SO}_2$  has a weak Van der Waals bond between its molecules
- $\therefore \text{Na}_2\text{O}$  requires more heat energy to weaken or break the ionic bonds than  $\text{SO}_2$  requires breaking Van der Waals bonds
35.  $\text{AlCl}_3$  has simple molecular structures with weak Van der Waals between the molecules  
 $\text{MgCl}_2$  has giant ionic structures with strong ionic bonds  
 Due to insoluble coating of aluminum oxide which prevents any reaction ✓1

#### 4. Salts

- Conc.  $\text{H}_2\text{SO}_4$  /  $\text{H}_2\text{SO}_4$
  - Heat the solution to concentrate it.  
Allow for crystals to form ✓ ½ Filter ✓ ½
  - Anhydrous Copper(II) sulphate /  $\text{CuSO}_4(\text{s})$
- To  $\text{MgO}$ , add excess  $\text{HNO}_3$ , ✓ ½  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Add  $\text{NaOH}$  or  $\text{KOH}$  or  $\text{NH}_4\text{OH}$  to the mixture, ✓ ½ Filter ✓ ½ and dry ✓ ½ the residue.
  - Anti-acid (Treatment of acid indigestion)  
– Making tooth past ✓1
- Add excess lead (II) Oxide to dilute nitric (v) acid and filter to get lead (II) nitrate solution. Add sodium carbonate solution to lead (II) nitrate to precipitate lead (II) carbonate and wash with distilled water.
- Sodium nitrate / sodium nitrite
  - Black charcoal glows red  
Grey ash formed
  - carbon (II) oxide

5. .a)

Particle	Mass number	Number of protons	Number of neutrons	Number of electrons
E	37	17	(i) 20	18
F	32	(ii) 16	16	16
G	(iii) 39	19	20	18
H	40	20	(iv)	18

- E, G and H
- They became a white powder
    - Efflorescence
  - Add water to sodium oxide to form sodium hydroxide solution. Bubble excess carbon (IV) oxide in sodium hydroxide solution to form sodium hydrogen carbonate. Heat sodium hydrogen carbonate solution to evaporate water.
  - $\text{NH}_4\text{Cl}$  decomposes on heating to produce  $\text{NH}_3$  and  $\text{HCl}$  (g).  $\text{NH}_3(\text{g})$  is lighter than  $\text{HCl}(\text{g})$  hence diffuses faster and turns red-litmus to blue  $\text{HCl}$  is denser hence diffuses at a slower rate: changes blue litmus to red

9.

10. a) i) *Hydroscopy// hygroscopic*  
 ii) *Deliquescence// Deliquescent*  
 iii) *Efflorescence// Efflorescent*
- b) i)  $Zn(OH)_4^{2-}$   
 ii)  $Cu(NH_3)_4^{2+}$
11. (a) (i)  $2KNO_3(s) \rightarrow 2KNO_2(s) + O_2(g)$  -  $\frac{1}{2}$ mk for wrong states  
 (ii)  $2AgNO_3(s) \rightarrow 2Ag(s) + 2NO_2(g) + O_2(g)$
12. (a) (i) *Carbon (iv) Oxide*  
*Dilute hydrochloric acid*  
 (ii)  $Mg(HCO_3)_{2(aq)} \rightarrow MgCO_3(s) + H_2O(l) + CO_2(g)$   
 (iii) *Add sodium carbonate/any soluble carbonate (named) solution;*  
*Filter*  
*Dry the residue between two filter papers*
13. a) *magnesium Oxide*  
 b)  $2Mg(s) + O_2(g) \rightarrow 2MgO(s)$
- c) i) *Sodium sulphate*  
 ii)  $MgCO_3$
- d)  $MgO(s) + H_2SO_{4(aq)} \rightarrow MgSO_{4(aq)} + H_2O(l)$   
 e)  $Mg^{2+}_{(aq)} + CO_3^{2-}_{(aq)} \rightarrow MgCO_{3(s)}$   
 f)  $MgCO_{3(g)} \rightarrow MgO(g) + CO_2(g)$   
 g) *Na<sup>+</sup> ions and SO<sub>4</sub><sup>2-</sup> ions*  
 h) *Precipitation/ double decomposition*  
 i) *Crystals turn to a white powder. The salt is efflorescent hence it loses its water of crystallization forming a powder*
14. a) i) *Hydroscopy// hygroscopic*  
 ii) *Deliquescence// Deliquescent*  
 iii) *Efflorescence// Efflorescent*
- b) i)  $Zn(OH)_4^{2-}$   
 ii)  $Cu(NH_3)_4^{2+}$
15. - *Dissolve lead (ii) nitrate crystal in a given amount of distilled water in a beaker*  
 - *To dilute sulphuric  $\sqrt{\frac{1}{2}}$  (vi) acid in a beaker add magnesium  $\sqrt{\frac{1}{2}}$  oxide powder*  
 - *React the two solutions obtained*  
 - *Filter the mixture*  
 - *Dry the residue between filter papers to obtain a dry sample of lead (ii) sulphate*
16. (a) *Zinc oxide*  $\sqrt{1}$   $ZnO$  (1 mk)  
 (b)  $ZnO(s) + H_2SO_{4(aq)} \sqrt{1} \rightarrow ZnSO_{4(aq)} + H_2O$  (1 mk)  
 (c)  $\left[ Zn(OH)_4 \right]^{2-} \sqrt{1}$  (1 mk)
17. (i) *Efflorescence*  
 (ii)  $Na_2CO_3 \cdot 10H_2O$  (If letters are joined – no mark)
18. (i)  $Pb^{2+}$   $\checkmark 1$   
 (ii) *White precipitate formed soluble in excess*  $\checkmark 1$
19. *Calcium oxide hygroscopic atmospheric water vapour ad becomes wet*  
*Some laboratory gases are acidic*  
*While calcium oxide is basic*  
*Therefore calcium oxide reacts with the gas//calcium oxide would absorb the gas*
20. *A piece of marble chips was strongly heated in air for about 30 minutes. Some drops of water*

were added drop by drop to the product when it was still warm.

Answers

i) It decomposes to give Calcium oxide/Lime and Carbon (IV) oxide

ii) A lot of heat is evolved which makes the piece of lime swell hence the name quick lime and Calcium hydroxide (slaked lime) is formed. ✓ ½

21. a) i) Gas C  $\text{O}_2(g)$  ✓ ½ Gas B  $\text{NO}_2$  ✓ ½

ii)  $\text{Zn}^{2+}$  and  $\text{NO}_3^-$  ✓ ½

Balanced

State symbols

Chemical symbols

22. (a) Glowing splint is relighted/rekindles

(b) Pale yellow solid

23. a) Deliquescence ✓ 1

b) Deposition ✓ 1

24. a) - To  $\text{MgO}$  add excess  $\text{HNO}_3$  ✓ ½ (Or  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ )

- Add  $\text{NaOH}$  or  $\text{KOH}$  or  $\text{NH}_4\text{OH}$  to the mixture ✓ ½

- Filter and dry the residue ✓ 1

b) Uses as

- Anti-acid or tooth paste ✓

25. - Dil  $\text{NaOH}$  may not absorb all the carbon (IV) oxide gas produced

- Candle may go off before all the oxygen is used due to build up carbon (IV) oxide

26. a) Acid salts  $\text{NaH}_2\text{PO}_4(s)$  ✓ 1

Basic salts –  $\text{Mg(OH)Cl}(s)$  ✓ 1

Normal salts –  $\text{Ca(NO}_3)_2(s)$  ✓ 1

Double salt –  $\text{Fe(NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$  ✓ 1

b) i) Hydrolysis – Reaction of water with a compound to form at least two products ✓ 1

ii) Moist litmus paper turns red due to the  $\text{HCl}$  gas produced ✓ 1

Or accept equation for the explanation

## Effect of an electric current on substances

1. (a)  $\text{Pb}^{2+}_{(l)} + 2e^- \rightarrow \text{Pb}_{(s)}$

(b) - There is liberation of brown vapour

- The brown vapour is due to the formation of bromine molecule

2. E – Giant ionic structure

F – Giant metallic structure

3. (a) - Electrolytes are melts or aqueous solutions which allow electric current to pass through them and are decomposed by it while non-electrolyte are melts or aqueous solution which do not conduct electric current

- Electrolytes contain mobile ions while non-electrolyte contains molecules.

(c) (i) I bulb did not light when sugar solution was put into the beaker

II bulb light when salt solution was put into the beaker

(ii) *Non- electrolyte I*  
*Electrolyte II*

(b) (i) *heating*

(ii) *Cathode*

(iii) *Anode*

*A brown yellow gas is evolved*

4. a) i) *Decomposes to  $\text{Pb}^{2+}$  and ions which are later reduced to Pb and are oxidized to Br*  
 ii)  *$\text{Br}_{2(g)}$  produced is poisonous*

5. I (a) *Crystallization – The solidifying of a salt form a saturated solution on cooling.*

(b) *Addition of sodium chloride to soap-glycerol mixture in order to precipitate the soap.*

II– *to the nitric acid in a beaker, add barium carbonate solid as you stir until effervescence stops.*

- *Filter to obtain the filtrate*

- *Add dilute nitric acid to the filtrate and filter to obtain the residue*

- *Dry the residue under the sun or between filter papers.*

III (a) (i)  $\text{K}^{+}$

(ii)  $\text{NO}_3$

(IV)  $\text{Cu}^{2+}(\text{NH}_3)_4$

(V) *In water HCL ionizes into mobile ions which conduct because water is polar while methyl is non-polar hence HCL does not ionize hence does not conduct electricity*

6. (i) *Faraday first law of electrolysis.*

*The mass of a substance dissolved or liberated in electrolysis is proportional to the quantity of electricity which passes through the electrolyte.*

(ii) (anode) – *Brown/fumes of a gas were evolved (cathode) – grey beads.*

7. a) (i) *Place dilute nitric acid ( $\text{HNO}_3$ ) in a beaker and warm.*

- *Add lead II oxide until no more dissolves*

- *Filter the un reacted lead II oxide*

- *Heat to evaporate & leave to crystallize.*

b)(i) *Crystals crack and split because of the gas accumulating inside*

- *Brown gas of Nitrogen IV oxide.*

- *Solid residue, lead II oxide which is orange when hot is yellow when cold.*

c) (iii) *white precipitate which is insoluble is excess ammonia*

8. (a)

(b) *To let the gas produce out, so that it does not explode due to pressure.*

(e) *At the anode a pale yellow gas is observed*

*Cathode – grey solid is formed.*

(d) Anode  $2F^{-}(c) \longrightarrow F_2(g), e 2e^{-}$

Cathode  $Pb^{2+} + 2e^{-} \longrightarrow Pb(s)$

(e) the gas produce is poisonous.

II a) C

b) Because it does not conduct electricity in solid state and not soluble.

c) B because it does not conducts electricity in solid state but in molten or aqueous solution it conducts.

d) Metallic bond.

9. a) A is Anode ✓

B is cathode. ✓

b) Bromine gas. ✓

c)  $2Br^{-}(l) - 2e^{-} \longrightarrow Br_2(g)$  ✓

10. B and D or  $F_2$  and Ne

11. a) i) oilcum  
ii) Water

b) i)  $SO_3(g) + H_2S_4(L) \longrightarrow H_2S_2O_7(L)$

ii)  $H_2S_2O_7(L) + H_2O(L) \longrightarrow 2H_2SO_4(L)$

12. a) Source of heat. ✓

b) The solid  $PbBr_2$  melts to form  $Pb^{2+}$  ✓ $\frac{1}{2}$  and  $2 Br^{-}$  ✓ $\frac{1}{2}$  that conduct electric current in the circuit hence the bulb lights/ $Pb^{2+}$  and  $2Br^{-}$  carry the current. ✓

## 6. Carbon and its compounds

1. a) – making of pencil

- As a lubricant

b) Graphite has delocalized in its structure hence it conducts electricity. Carbon uses all the four valency electrons to form covalent bonds hence do not have delocalized elect conduct electricity

2. a) Carbon (IV) oxide ( $CO_2$ ) ✓

b)  $2NaHCO_3(s) \longrightarrow Na_2CO_3(s) + H_2O(l) + CO_2(g)$  ✓

c) – Paper manufacture ✓

- Manufacture of glass.

- Softening of hard water.

3. Magnesium has a higher affinity for combined oxygen than carbon. Mg is more reactive than carbon thus displaces it from its oxide.

4 a) Carbon (iv) Oxide

b) Blue flame. Carbon (iv) oxide burns in air with a blue flame 1

5. a) A brown solid is formed

b)  $CuO(g) + C(g) \longrightarrow Cu(g) + CO(g)$

- c) As a fuel in water gas
6. (a) Covalent bond is bond between non-metal atoms where shared electrons are donated equally by all the atoms involved.  
 Dative bond is a bond in which shared electrons are donated by one atom.
- (b) The presence of triple bond in nitrogen requires very high temperatures to break

7. (a) Reduction by using carbon  
 b) J, carbon and H  
 decreasing order of reactivity 7. Study the structures A and B:

8. (i) Have giant atomic structure  
 (ii) To make drill bits or used in jewellery (any one)
- √1
9. (a) Allotropy is the existence of an element √1 in more than one form without change of state.  
 (b) Graphite contains delocalized √1 electrons between the layers while diamond has no 3 free √1 electrons. Its atoms are strongly bonded.
10. (a)  $C_{(s)} + CO_{2(g)} \longrightarrow 2CO_{(g)}$  √1 (1 mk)  
 (b) Burn charcoal in sufficient √1 oxygen Carbon (II) oxide (being a reducing agent) is easily oxidized to carbon (IV) oxide. √1 (1 mk)
- } 3
11. (a) Black √½ solid changes to reddish brown √½  
 (b)  $CuO_{(s)} + CO_{(g)} \longrightarrow Cu_{(s)} + CO_{2(g)}$  √ (1 mk)
- } 2
12. (a) Different forms of a substance at the same physical state;  
 (b) In graphite each carbon is bonded to 3 others and there are Vander waals forces between hexagous;  
 - In diamond each carbon atom is covalently bonded to four others making a rigid mass;
13. a) - Copper (ii) oxide changes √½ from black to brown/ reddish brown/ red brown √½  
 - A white ppt forms in the boiling tube √½  
 b)  $CO_{2(g)} + Ca(OH)_{2(aq)} \longrightarrow CaCO_{3(s)} + H_2O_{(l)}$  √1  
 c) Unreacted carbon (ii) Oxide is poisonous/ toxic/ pollutant it is converted to the less harmful gas  $CO_2$

14. a) A the substance is a gaining kinetic energy making it to vibrate vigorous up B,  
at point B to C the kinetic energy a gained is used to beak down the particle in solid state at  
this point the substance start melting and the temperature is constant.  
d) It is not water because the melting of water is  $100^{\circ}\text{C}$  not  $115^{\circ}\text{C}$ .  
e) The melting point will be lower because of the impurity NaCl.  
f) The temperature is constant.

15. (a) (i) Carbon (II) Oxide or CO – (reject Carbon monoxide)  
(ii) Combines with haemoglobin to form caborhaemoglobin which prevents carrying of  
oxygen  
(b) (i)  $\text{CO}(\text{g}) + \text{C}(\text{s}) \longrightarrow 2\text{CO}(\text{g})$   
(ii)  $\text{ZnO}(\text{s}) + \text{CO}(\text{g}) \longrightarrow \text{Zn}(\text{s}) + \text{CO}_2(\text{g})$   
(c) Orange/yellow Lead (II) Oxides turns grey  
(d)  $\text{CaCO}_3(\text{s}) + 2\text{HCl}(\text{aq}) \longrightarrow \text{CaCl}_2(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$   
(e) Methanoic acid and concentrated sulphuric acid  
(f)

16. (a) (i) - Ammonia gas ✓1  
- Calcium carbonate. ✓1  
- Brine ✓1 or Concentrated sodium chloride.  
- Coke (Any three materials)

- (ii) - Carbon (IV) oxide. ✓1  
- Ammonia gas. ✓1  
- Water (Any two)

- (iii) Chamber 3 ✓1  
Chamber 2 ✓1

- (iv) U – Ammonia chloride ✓1  
V – Sodium hydrogen carbonate. ✓1

OR

- c) - Manufacture of glass.  
- Softening of hard water.  
- Manufacture of papers.  
- Manufacture of soap.  
- Refining of metals.

17. (a) (i) – The gas is collected over water  
 - The gas is not passed through a drying agent  
 (ii)  $PbCl_2$  is formed which is insoluble hence prevents contact between the carbonate and the acid  
 (iii)  $CO_2(g) + C(s) \xrightarrow{\text{Heat}} 2CO(g)$   
 $CO_2(g) + 2NaOH(aq) \longrightarrow Na_2CO_3(aq) + H_2O(l)$

- (iv) – Solid  $CO_2$  used as a refrigerant  
 ▪ Used in making aerated drinks  
 ▪ Solid  $CO_2$  is used in cloud-seeding  
 ▪  $CO_2$  used as an ingredient/air material in solvary process  
 (v) – Denser than air  
 - Does not support combustion (burning)

(b) Reducing Property

(c)-  $Al_2(CO_3)_3$  hydrolyses in water/moisture forming  $H^+$  ions which reacts with the carbonate and dissolves

18. Brown fumes of a gas are produced as the charcoal dissolves in the acid. The charcoal reduces nitric (V) acid to nitrogen (IV) oxide gas that is brown while the charcoal is oxidized to carbon (IV) oxide.

19. (a) Due to formation of calcium hydrogen carbonate which is a soluble salt

(- Award 1mk if equation is correctly balanced

- Penalize  $\frac{1}{2}$  mk if equation if not balanced)

20. a) A – Concentrated sulphuric acid (vi) acid  $\sqrt{1}$

b)

Accept conc  $H_2SO_4$  (reject where concentrated is not mentioned)

Workability  $\sqrt{1}$

Correct method of collection  $\sqrt{1}$

Of the gas  $\sqrt{1}$

The two equations should be mentioned 2 mks

## Gas laws

1. X:  $t_1 = 28.3\text{sec}$  RMM = ?

$Q_2$ :  $t_2 = 20.0\text{sec}$  RMM=32

$T \propto \sqrt{MM}$  ✓

$\frac{T_1}{T_2} = \sqrt{\frac{X}{32}}$

$\left(\frac{T_1}{T_2}\right)^2 = \frac{X}{32}$  ✓

$\left(\frac{28.3}{20.0}\right)^2 = \frac{X}{32}$  ✓

$X = \frac{28.3^2 \times 32}{400}$  ✓

$$X = 64$$

2. (a) The rate of diffusion of a gas is inversely proportional to the square root of its density under the same conditions of temperature and pressure

(b) Rate of gas  $V = \frac{1}{5} \times \frac{100\text{cm}}{10\text{sec}}$

$$\begin{aligned} &= 2\text{cm/sec} \quad \checkmark \frac{1}{2} \\ \text{Rate of } W &= \frac{10\text{cm}}{10\text{sec}} \\ &= 1\text{cm/sec} \quad \checkmark \frac{1}{2} \end{aligned}$$

$$\frac{RV}{RW} = \frac{\sqrt{MW}}{\sqrt{MV}} = \frac{2}{1} = \sqrt{\frac{MW}{16}}$$

$$\begin{aligned} 2^2 &= \frac{MW}{\frac{1}{4} \times \frac{16}{1}} \\ &= \frac{MW}{4} \times 4 \\ &= MW \\ MW &= 64 \end{aligned}$$

3. (a) The volume of a fixed mass of a gas is directly proportional to its absolute temperature at constant Pressure

(b) Apply combined gas law;  $\frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2}$

$$\left. \begin{aligned} V_1 &= 3.5 \times 10^{-2} \text{ m}^3 & V_2 &= 2.8 \times 10^{-2} \text{ m}^3 \\ P_1 &= 1.0 \times 10^5 \text{ Pa} & P_2 &= 1.0 \times 10^5 \text{ Pa} \\ T_1 &= 291 \text{ K} & T_2 &= ? \end{aligned} \right\} \checkmark \frac{1}{2}$$

$$T_2 = \frac{P_2 V_2 T_1}{P_1 V_1}$$

$$T_2 = \frac{1.0 \times 10^5 \text{ Pa} \times 2.8 \times 10^{-2} \text{ m}^3 \times 291 \text{ K}}{1.0 \times 10^5 \text{ Pa} \times 3.5 \times 10^{-2} \text{ m}^3}$$

$$T_2 = 232.8 \text{ k} \quad \checkmark$$

4.  $\frac{TsO_2}{TO_2} = \frac{R.M.N.SO_2}{R.M.MO_2} \quad \checkmark \frac{1}{2}$

$$SO_2 = 32 + (16 \times 2) = 64 \quad \checkmark \frac{1}{2}$$

$$O_2 = (16 \times 2) = 32 \quad \checkmark \frac{1}{2}$$

$$\frac{TsO_2}{50} = \sqrt{\frac{64}{32}} \quad \checkmark \frac{1}{2} = 70.75 \quad \checkmark \frac{1}{2}$$

5. a) The rate of diffusion of a fixed mass of a gas is inversely proportional to the square root of its density at constant temperature and pressure

b)  $RHCl = \frac{30 \text{ cm}^3}{20 \text{ se}} = 1.5 \text{ cm}^3 \quad \text{see}$

$$\frac{RHCL}{RSO_2} = \frac{\sqrt{MSO_2}}{\sqrt{MHCL}}$$

$$\frac{(1.5)^2}{RSO_2} = \frac{\sqrt{64}}{\sqrt{36.5}}$$

$$RSO_2 = \sqrt{36.5}$$

$$(RSO_2)^2 = \frac{2.25 \times 36.5}{64}$$

$$RSO_2 = \frac{\sqrt{2.25 \times 36.5}}{64}$$

$$1.133 \text{ cm}^3 \frac{1 \text{ sec}}{42 \text{ cm}^3} = \frac{42 \times 1}{1.133}$$

$$= 37 \text{ sec}$$

6. a) *Boyles' law For a fixed mass of a gas, volume is inversely promotional to pressure at constant temperature*

b)

$$c) \frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2} \sqrt{1/2} \quad V_2 = \frac{P_1 V_1}{T_1} \times \frac{T_2}{P_2} \sqrt{1/2}$$

$$= \frac{250 \times 273 - 23}{273 + 127} \sqrt{1/2}$$

$$= 156.5 \text{ cm}^3$$

7. a) *RFM of CaCO<sub>3</sub> = 40 + 12 + 48*  
 $= 100 \text{ kg} \cdot \sqrt{1/2}$

$$\therefore 100 \text{ kg of CaCO}_3 \equiv 22.4 \text{ dm}^3 \text{ of CO}_2(\text{g})$$

$$1000 \text{ kg } \text{''} \text{''} \longrightarrow ?$$

$$= \frac{22.4 \times 1000}{100} \sqrt{1} = 224 \text{ dm}^3 \sqrt{1/2}$$

8.  $T_1 = 23 + 273 = 296$      $T_2 = -25 + 273 = 248$   
 $V_1 = 200 \text{ cm}^3$      $V_2 = ?$   
 $P_1 = 740 \text{ mmHg}$      $P_2 = 780 \text{ mmHg}$

$$\frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2}$$

$$\frac{740 \times 200}{296} \sqrt{1} = \frac{780 \times ?}{248} \sqrt{1}$$

$$\therefore x = \frac{740 \times 200 \times 248}{296 \times 780}$$

$$= 158.974 \text{ cm}^3 \sqrt{1} \text{ (penalize } 1/2 \text{ mark for units)}$$

9.  $\frac{Rk}{Rs} = \frac{\sqrt{Ms}}{Mk}$   
 $\therefore \frac{12}{7.2} = \frac{\sqrt{x} \sqrt{1/2}}{16}$   
 $X = \frac{12^2 \times 16 \sqrt{1/2}}{7.2^2}$   
 $= 44.464 \sqrt{1}$

10. (a) *When gases combine they do so in volume which bear a simple ratio to one another and to the product if gaseous under standard temperature and pressure*

11. a) *Rate of diffusion is whereby proportional to molecular mass of a gas.  $\sqrt{1}$*   
 b)  $\frac{TCO_2}{MCO_2} = \sqrt{1}$

$$\frac{TCO}{T} = \frac{\sqrt{MCO}}{\sqrt{28}} \sqrt{\frac{1}{2}}$$

$$\Rightarrow \frac{200}{T} = \frac{\sqrt{44}}{\sqrt{28}} = \frac{\sqrt{44}}{\sqrt{28}} \sqrt{\frac{1}{2}}$$

$$\Rightarrow \left(\frac{200}{T}\right)^2 = \frac{11}{7}$$

$$\Rightarrow \frac{T}{200} = \frac{\sqrt{7}}{\sqrt{11}}$$

$$\Rightarrow T = 200 \cdot 0.79772 \sqrt{\frac{1}{2}} = 159.5 \text{ Seconds. } \sqrt{\frac{1}{2}}$$

$$= 1.128 \text{ dm}^3$$

✓ 1

✓ 1/2

26. Mass due Carbon in  $\text{CO}_2 = \frac{12}{44} \times 35.2$

$$= 0.96$$

$$\text{Moles carbon} = \frac{0.96}{12} = 0.08$$

$$\text{Mass due Hydrogen in } \text{H}_2\text{O} = \frac{2}{18} \times 1.40$$

$$= 0.156$$

$$\text{Moles hydrogen} = \frac{0.156}{2} = 0.078$$

1

$$\text{Mole ratio C:H} = 1 : 1.95$$

$$\text{E.F} = \text{CH}_2$$

$$34.8 \text{ g}$$

$$\frac{15.9 \text{ g}}{106}$$

$$+ \frac{18.9 \text{ g}}{18}$$

$$\frac{0.15}{0.15} \sqrt{1}$$

$$\frac{1.15}{0.15}$$

$$x = 7 \sqrt{1}$$

3

28. % of  $\text{H}_2\text{O}$  lost = 14.5% ^

$$\% \text{ of anhydrous } \text{Na}_2\text{CO}_3 = 85.5\% \quad (\frac{1}{2} \text{mk})$$

$$\text{R.F.M of } \text{Na}_2\text{CO}_3 = 106 \quad (\frac{1}{2} \text{mk})$$

$$\text{RMM of } \text{H}_2\text{O} = 18 \quad (\frac{1}{2} \text{mk})$$

$\text{Na}_2\text{CO}_3$	$\text{H}_2\text{O}$
$\frac{85.5}{106}$	$\frac{14.5}{18} \quad (\frac{1}{2} \text{mk})$
$\frac{0.8066}{0.8055}$	$\frac{0.8055}{0.8055} \quad (\frac{1}{2} \text{mk})$

$$n = 1 (\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}) \quad (\frac{1}{2} \text{mk})$$

29. Moles of  $\text{Na}_2\text{CO}_3 = \frac{20 \times 0.1}{1000} = 0.002 \text{ moles}$

Mole ratio 1 : 1

$$\text{Moles of } \text{H}_2\text{SO}_4 = \text{Moles of } \text{Na}_2\text{CO}_3$$

$$= 0.002 \text{ moles}$$

$$\text{Molarity of } \text{H}_2\text{SO}_4 = \frac{10000 \times 0.002}{13} = 0.154 \text{ moles}$$

13

30.

Element	C	H	O
---------	---	---	---

%	68.9	13.5	21.6
Molar mass	12	1	16
Moles	$\frac{68.9}{12}$ 5.403	$\frac{13.5}{1}$ 13.5	$\frac{21.6}{16}$ 1.35
MR	$\frac{5.43}{1.33}$ 4	$\frac{13.5}{1.35}$ 10	$\frac{1.35}{1.35}$ 1
Ratio	4	10	1

$$h(C_4H_{10}O) = 74$$

$$h(12 \times 4) + (10 \times 1) + 16 = 74$$

$$74h = 74$$

$$H = 1$$

Formula  $C_4H_{10}O$

31. Moles  $C_4H_{10} = \frac{1.12}{22.4} = 0.05 \text{ mol}$

Heat produced  $+ 0.05 \times (3000) = 150 \text{ kJ}$

Usefull heat  $= \frac{75 \times 150}{100} = 112.5 \text{ kJ}$

Let volume of water  $= V$

Room temperature  $= 25^\circ C$

Boiling point  $= 100^\circ C$

Change in temperature,  $\Delta T = 100 - 25 = 75^\circ C \quad \frac{1}{2} \text{ mk}$

$\Delta T \times \text{mass} \times C = Q \quad 315V = 112500$

$= \frac{75 \times V \times 4.2}{1000} = 112.5 \quad V = \frac{112500}{315} \quad \frac{1}{2} \text{ mk}$

$V = 357. \text{ km}^3 \quad \frac{1}{2} \text{ mk}$

32. RFM  $Na_2CO_3 = 43 + 12 + 48 = 106$

Mol.  $Na_2CO_3 = \frac{19.6}{106} = 0.1849057$

Molarity of  $Na_2CO_3 = \frac{0.1849057}{0.25} = 0.73962 \text{ m}$

Mole ratio  $Na_2CO_3 : MgCl_2$  is 1:1

$\therefore$  mol.  $MgCl_2$  Reacted  $= 0.1849$

If 2.0 mol.  $= 1000 \text{ cm}^3$  solution  $mg \text{ cl}_2$

$= 0.1849 \text{ mol} = \frac{0.1849 \times 1000}{2}$

$= 92.45$  or  $92.5 \text{ cm}^3$

33. i) ACID BASE

1 2

$\frac{1}{2} 0.004 = 0.002 \text{ moles } \sqrt{\frac{1}{2}}$   $\frac{20 \text{ cm}^3 \times 0.2 \text{ moles}}{1000 \text{ cm}^3} = 0.004 \text{ moles}$

$\frac{25 \text{ cm}^3}{1000 \text{ cm}^3} \times 0.002 \text{ moles } \sqrt{\frac{1}{2}}$

\_\_\_\_\_ ?

$1000 \text{ cm}^3 \times 0.002 \text{ moles} = 0.08 \text{ M } \sqrt{\frac{1}{2}}$

ii) 0.08 moles \_\_\_\_\_  $10.08 \text{ g } H_2C_2O_4 \times H_2O \sqrt{\frac{1}{2}}$

1 mole \_\_\_\_\_ ?

$$\frac{1 \text{ mole} \times 10.08}{0.08 \text{ moles}} = 126 \sqrt{1/2}$$

$$126 \text{ } \underline{\hspace{2cm}} \text{ } H_2C_2O_xH_2O$$

$$18x = 126 - 90 \sqrt{1/2}$$

$$18x = 36$$

$$x = 2 \sqrt{1/2}$$

$$1.6 \text{ g} \times 22.4 \text{ dm}^3 \sqrt{1/2} = 1.4933 \text{ dm}^3$$

36. Mass of Oxygen = 12 - 8.4 = 3.5g

Element	Fe	O
Mass	8.4	3.6
R.A.M	56	16
No. of moles	$\frac{8.4}{56}$ 0.15	$\frac{3.6}{16} \sqrt{1/2}$ $0.225 \sqrt{1/2}$
Mole ration	$\frac{0.15}{0.15}$ 1 2	$\frac{0.225}{0.15} \sqrt{1/2}$ 1.5 x2 3 $\sqrt{1/2}$

$\therefore$  The empirical formula is  $Fe_2O_3$

## Organic chemistry 1

- Bromine decolorized immediately in ethane gas  $\sqrt{1}$
  - Temperature between 150°C - 250°C or temperature of 180°C
  - Carbon (IV) oxide or  $CO_2(g)$   $\sqrt{1}$

- Butane
  - Manufactures of cooking fats and margarine

4. a) Existence of cpds with the same molecular formula but different structural formula/arrangement of atoms

b)

*n* - butane/ ✓<sup>1/2</sup>

2 - butane/ ✓<sup>1/2</sup>

1 - butane/

But-2-ene

2 - methyl  
prop-1-ene

But-1-ene

5. a) 2.5

b) Q Group 1 ✓<sup>1/2</sup>, Period 4 ✓<sup>1/2</sup>

R Group 2 ✓<sup>1/2</sup>, Period 3 ✓<sup>1/2</sup>

6.

7.

a) To produce simpler hydrocarbons of industrial importance e.g. ethane which is widely used

b) Elevated temperature / high temperature 900 C

Catalyst

c) HC - C CH<sub>3</sub>

8.

a) Reagent concentrated sulphuric acid

Condition temperature 180° C

9.

a) H<sub>2</sub> CHCL CHCLCH<sub>2</sub>CH<sub>3</sub>

Name: 2, 3 dichloropentane

b) i) Structural Formula

ii) IUPAC name

pent - 1,3 - diene

10.

Isotopes are atoms of the same element with same atomic number but different mass numbers while isomers are compounds with the same molecular formula but different structural formula

11.

Addition polymerization. ✓<sup>1</sup>

12.

(a) When gases combine they do so in volume which bear a simple ratio to one another and to the product if gaseous under standard temperature and pressure

13.

$$\begin{aligned} \text{Volume of O}_2 &= \frac{20}{100} \times 150 \\ &= 30\text{cm}^3 \end{aligned}$$

$$\text{Remaining volume of O}_2 = 30 - 20 = 10\text{cm}^3$$

$$\begin{aligned} \text{Total volume of the gases} &= 20 + 10 + 10 \\ &= 40\text{cm}^3 \end{aligned}$$

15.

$$\begin{aligned} T_2 &= \frac{690 \times 15 \times 259}{650 \times 105} \\ &= 39.3\text{K} \\ &= -233.7^\circ\text{C} \end{aligned}$$

17 (a) i) Fractional Column.

ii) fractional distillation.

iii) different boiling points.

IV I A II F III B

b) G – road making or water proofing

C jet fuel or cooking and lighting.

18.

(i) ethyne

(ii) Alkynes – because it has triple bond between the two carbon atoms

(iii) Water is calcium carbide

(iv) - Colourless, odourless

-less denser than air

- Insoluble in water but soluble in organic solvents

(v) Hydrogenation

(vi) Halogenations

(viii) Carbon(IV) Oxide

(ix) Nitrogen I Oxide ( $\text{N}_2\text{O}$ )

19.

(a) (i) Gas /vapour

(ii) B - It has the second lowest boiling point thus second lowest molecular mass

(iii) C is impure since it boils over a range of temperature

(iv) It is boiled heated and the vapour of the components condense at different temperatures

(v) - Liquid air

- Crude oil

20. (a) (i) Gas /vapour  
(ii) B - It has the second lowest boiling point thus second lowest molecular mass  
(iii) C is impure since it boils over a range of temperature  
(iv) It is boiled heated and the vapour of the components condense at different temperatures  
(v) - Liquid air  
- Crude oil
21. a) i) Bitumen it has the highest boiling point  
ii) Fractional distillation; during distillation petrol would distill off at 175C, while diesel will distill at 350C  
iii) Each component is a mixture of hydrocarbons which have different boiling points  
iv) Methane, CH<sub>4</sub>, Ethane C<sub>2</sub>H<sub>6</sub>, propane, C<sub>3</sub>H<sub>8</sub>, Butane C<sub>4</sub>H<sub>10</sub>
- b) i) Burning in limited amount of air will produce carbon monoxide (carbon (II) Oxide) which is poisonous  
ii) Manufacture of Tar used in road tarmacking sealing of leakages on roofs
22. A. (i) Calcium carbide – CaC<sub>2</sub>  
(ii) Over water method  
(iii)  $\text{CaC}_2(\text{s}) + 2\text{H}_2\text{O}(\text{l}) \longrightarrow \text{Ca}(\text{OH})_2(\text{aq}) + \text{C}_2\text{H}_2(\text{g})$   
(iv)  $\text{C}_2\text{H}_2 + 2\text{I}_2 \longrightarrow \text{C}_2\text{H}_2\text{I}_2$   
(v) The reaction is highly exothermic hence sand helps to absorb excess heat.
- B. (i) A reaction in which an organic acid reacts with an alcohol to form a sweet smelling compound called ester.  
(ii)  $\text{CH}_3\text{COOCH}_3 + \text{H}_2\text{O} \longrightarrow \text{CH}_3\text{COOH} + \text{CH}_3\text{OH}$   
(iii) Hydrolysis
- C (i) F – Aluminium oxide – Al<sub>2</sub>O<sub>3</sub>  
N – C<sub>6</sub>H<sub>14</sub> – Hexane  
(ii) Cracking
- D. A fuel
23. i) Cracking of crude oil fractions. ✓  
ii) Temp – 400 – 500°C  
Pressure – 200 – 500 atmospheric Any 2 = 1  
Catalyst – Finely divided iron.  
iii)  $4\text{NH}_3(\text{g}) + 5\text{O}_2(\text{g}) \longrightarrow 4\text{NO}(\text{g}) + 6\text{H}_2\text{O}(\text{l})$   
iv) - Manufacture of nitrate fertilizers. ✓  
- Manufacture of explosives.  
- Purification of metals.
- b) - Red brown gas ✓ with pungent irritating smell due to reduction of HNO<sub>3</sub> to NO<sub>2</sub>  
- Blue ✓ solution due to formation of Cu (NO<sub>3</sub>)<sub>2</sub>
24. (a) (i) 2-bromo propene or 2-bromo prop-1-ene  
(ii) Prop-1-ene  
(b) (i) Changes from orange to Green  
(ii) Effervescence/bubbles of gas produced  
(c) Step 1  
- Fermentation of glucose  
Glucose broken down in absence of oxygen using enzymes

- Dehydration of ethanol; using concentrated sulphuric (VI) acid and high temperature of 170°C

**Step II**

- Dehydration of ethanol; using concentrated sulphuric (VI) acid and high temperature of 170°C

(d) Compound A

(e) – release chlorine gas which destroy ozone layer

- Chlorine gas combines with vapour in atmosphere to form acid rain which destroy vegetation
- Chlorine gas can cause respiratory diseases

25. (a) (i) 2,2 – dimethyl pentane

(b) I carbon IV oxide.

II Hydrogen gas.

III Propane.

(ii) I Hydrogenation.

II Neutralization

III substitution

(iv) Condition Presence of U.u light

Reagents – Chlorine gas

Mole ratio :

74 tones of acid  
21.9

96 tones of salt

$$\frac{21.9 \times 96}{74} = 28.4 \text{ tones}$$

Or  $\frac{21.9}{74} = 0.29$  moles of salt

$$= 0.29 \times 96 = 28.4 \text{ tones}$$

(ii) use in making – Plastic crates plastic boxes plastic ropes

(c) I (i) soap detergent

(ii) Soap less detergent

II Soap less Detergent - non biodegradable.

(ii) Bromine water is decolourised because X is unsaturated or has a (-C = C-) double bond.

27. a) i) Propane  
ii) But-2-yne

b) i) Ploythene

ii) Bubble pass ethane gas in acidified  $KMnO_4$  or acidified  $K_2Cr_2O_7$

- c) i)  $C_nH_{2n}$   
ii) @5H10

- d) i) Step I – hydrogen  
Step II – Hydrogen chloride  
Step IV – Sodalime

- A fuel
- Manufacture of methanol
- Manufacture of methanol

28. i) 2 – Methylprop – 1 ene      $\sqrt{1}$  mark  
ii) Pent – L – yne      $\sqrt{1}$  mark     [Total 12 marks]

29. The melting point increases from A to C this is due to increase in number delocalized electron hence increase in the strength of metallic bond.

D forms a giant structure with strong covalent bonds. Hence high melting.

It exhibits allstrophy ie may exist as two different form in the same state.

C2 (so4)3

Noble gases or inert

Used in filament bulbs

Used to produce an inert atmosphere in high temperature metallurgical processes e.g welding.

C is amphoteric oxide

F acidic it is non –metal oxide.

Ethene

Acidified potassium Manganate VI abromine water it from a colourless solution

Nickel catalyst

30. a) i) Bitumen it has the highest boiling point  
ii) Fractional distillation; during distillation petrol would distill off at 175C, while diesel will distill at 350C  
iii) Each component is a mixture of hydrocarbons which have different boiling points  
iv) Methane,  $CH_4$ , Ethane  $C_2H_6$ , propane,  $C_3H_8$ , Butane  $C_4H_{10}$
- b) i) Burning in limited amount of air will produce carbon monoxide (carbon (II) Oxide) which is poisonous  
ii) Manufacture of Tar used in road tarmacking sealing of leakages on roofs
31. i)  $C_nH_{2n}$ , where n = No. of carbon atoms  
ii) 70  
iii)  $C_5H_{10}$ ,  $CH_3CH=CHCH_2CH_3$   
OR  $CH_3CH_2CH=CH_2$

32. (a) Hydrocarbon.  $\sqrt{1}$

(b) Black specks is carbon }  
 Colourless gas is steam }  $\checkmark 1$   
 Hydrocarbon burn in air to form carbon  $\checkmark 1/2$  and water  $\checkmark 1/2$

3

## Nitrogen and its compounds

Hot rod continues to glow red  
 - NO formed reacts with oxygen to form  $\text{NO}_2$  (brown fumes)  
 - Reaction highly exothermic

3. a) Calcium hydroxide  
 b)  $\text{Ca(OH)}_2(\text{g}) + 2\text{NH}_4\text{Cl}(\text{g}) \longrightarrow 2\text{NH}_3(\text{g}) + \text{CaCl}_2 + 2\text{H}_2\text{O}(\text{L})$
4. (a) It neutralizes air to prevent violent combustion reaction from occurring.  
 (b) Its inert and have very low b.pt of  $-196^\circ\text{C}$   
 \*MAT
5. a) X is Nitrogen.  $\sqrt{1}$   
 b) It is less dense than air.  $\sqrt{1/2}$   
 c) – In preservation of semen in artificial insemination.  $\sqrt{1}$
6. a) (i) Solution A contains  $\text{Pb}^{2+}(\text{aq})$  ions  $\sqrt{1/2}$   
 (ii) Solution B contains  $\text{Al}^{3+}(\text{aq})$  ions.  $\sqrt{1/2}$   
 b) – A colourless liquid at cooler parts  $\sqrt{1}$  of test-tube is formed.  
 - A white residue remains in the test-tube.  $\sqrt{1}$
7. a) to expel air that is in the combustion tube so that oxygen in it does not react with hot copper  $\sqrt{1}$   
 b) brown  $\sqrt{1/2}$  copper metal will change to black  $\sqrt{1/2}$   
 c) nitrogen  $\sqrt{1}$
8. (a) To increase the surface area over which the reaction occurs hence increased rate of reaction.  $\sqrt{1}$   
 (b)  $\text{NH}_3$  is basic and reacts with some moles of the acid hence reduction in concentration  $\sqrt{1}$
9. (a) (i) The solution changes from green  $\sqrt{1}$  to brown  $\sqrt{1}$  (1 mk)  
 (ii) A brown  $\sqrt{1}$  precipitate is formed. (1 mk)  
 (b)  $\text{Fe}^{3+}(\text{aq}) + 3\text{OH}^{-}(\text{aq}) \longrightarrow \text{Fe(OH)}_3(\text{s}) \sqrt{1}$  (1 mk) } 3
10. (a) – Absorbs carbon (IV) oxide from  $\sqrt{1}$  the air. (1 mk)  
 (b)  $2\text{Cu}(\text{s}) + \text{O}_2 \longrightarrow 2\text{CuO}(\text{s}) \sqrt{1}$  (1 mk)  
 (c) Because it has the rare gases.  $\sqrt{1}$  (1 mk) } 3
11. (a) Anion –  $\text{CO}_3$   
 Cation –  $\text{Cu}^{2+}$   
 (b)  $\text{Cu}^{2+} + 4\text{NH}_3 \longrightarrow \{\text{CuNH}_3\}_4^{2+}$
12. (a) (i)  $\text{NH}_4\text{NO}_3(\text{s}) \longrightarrow \text{N}_2\text{O}(\text{g}) + 2\text{H}_2\text{O}(\text{g})$   
 (ii)  $\text{NH}_4\text{NO}_3$  should not be heated further if the quantity remaining is small because it may explode  
 or A mixture of  $\text{NH}_4\text{Cl}$  &  $\text{KNO}_3$  can be used instead of  $\text{NH}_4\text{NO}_3$  leading to double decomposition taking place safely without explosion  
 (iii) Anhydrous calcium chloride in a u-tube  
 (iv) Reacts with oxygen to form brown fumes of Nitrogen (IV) Oxide  
 $2\text{N}_2\text{O}(\text{g}) + \text{O}_2(\text{g}) \longrightarrow 2\text{NO}_2(\text{g})$   
 (v) – Has no colour  
 - Has a slight sweet smell  
 - Fairly soluble in water  $\checkmark$   
 - Denser than air  $\checkmark$

- (b) (i) Provides a large surface area for the absorption of ammonia gas by the water or prevent "bricking" back of water ✓  
(ii) Water would brick back into the hot preparation flask causing it to crack or break /an explosion can occur ✓  
(iii) Red litmus paper would turn to blue, blue litmus paper remains blue each ✓
13. (a) B – ammonia gas ✓1  
C - nitrogen (II) oxide (NO) ✓1  
E – water ✓1  
F – unreacted gases ✓1
- (b) The mixture of ammonia and air is passed through heated/ catalyst where ammonia (II) is oxidized to nitrogen (II) oxide. ✓1
- (c) Gases are cooled and air passed through heated/ catalyst where ammonia is further oxidized to nitrogen(IV) oxide. ✓1
- (d) Fractional distillation, ✓½  
Water with a lower boiling point ✓½ than nitric (V) acid, distills left leaving the concentrates acid.
14. a)i) Fractional distillation  
ii) Argon
- b) A Sulphur  
B Ammonia gas  
C Oteum  
D Amonium sulphate
- c) i) Finely divided iron  
ii) Vanadium (v) Oxide
- d) Speeds up the rate of reaction by lowering the activation energy
- e)  $2\text{NH}_3(\text{g}) + \text{H}_2\text{SO}_4(\text{aq}) \longrightarrow (\text{NH}_4)_2\text{SO}_4(\text{aq})$
- f) R.M.M of  $(\text{NH}_4) = 132$   
Mass of N = 28  
% N =  $\frac{28}{132} \times 100 = 21.212\%$
- g) Used as a fertilizer
15. (a) (i) Fused calcium chloride /Cao (quick lime)  
(ii) To remove carbon (IV) Oxide  
(iii)  $4\text{Fe}^+(\text{s}) + 3\text{O}_2(\text{g}) \longrightarrow 3\text{Fe}_2\text{O}_3(\text{s})$   
OR  $3\text{Fe}(\text{s}) + 2\text{O}_2(\text{g}) \longrightarrow \text{Fe}_3\text{O}_4(\text{s})$   
(iv) Argon/Helium/Neon/Krepton  
(v) Provide very low temperature so that the semen does not decompose /is not destroyed
- (b) (i) Concentrated sulphuric acid  
(ii)  $\text{NaNO}_3(\text{s}) + \text{H}_2\text{SO}_4(\text{l}) \longrightarrow \text{NaHSO}_4(\text{aq}) + \text{HNO}_3(\text{aq})$  ✓1  
OR  $2\text{NaNO}_3 + \text{H}_2\text{SO}_4(\text{l}) \longrightarrow \text{Na}_2\text{SO}_4 + 2\text{HNO}_3$   
(reject unbalanced chemical equation)

✓ 1

(b) Copper reacts with 50% nitric acid to give nitrogen II Oxide which is colourless. Air oxidizes

Nitrogen II oxide to Nitrogen IV oxide which is brown.

16. (a) (i) Nitrogen – Fractional distillation of liquid air – ( ½ mk)

Hydrogen – Cracking of alkanes

-Electrolysis of acidified water

(ii) Temperature – 400°C – 500°C

Pressure – 400atm – 500atm

Catalyst – finely divided iron

(iii) Catalyst P – Nickel

Gas M – Nitrogen IV oxide

(v) To a small portion of the nitrate liquid in a test tube add equal amount of freshly prepared iron (II) sulphate followed by some drops of conc.  $\text{H}_2\text{SO}_4$  slowly on the sides. If a brown ring forms on the boundary of the two solutions, a nitrate is confirmed.

(vii) – Manufacture of nitrogenous fertilizers

- Manufacture of synthetic fibres e.g nylon

- Manufacture of explosives e.g TNT

- Manufacture of textile dyes

- Manufacture of other acids e.g. phosphoric acid

17. (a) (i) Nitrogen (I) Oxides.

Rej. Dinitrogen oxides.

(iii) The gas is soluble in cold water.

(iv) An irritating choking smell of a gas.

(b) (i) Platinum wire.

(iii) Nitrogen (I) Oxide

Colourless.

Relights a glowing splint.

Has a sweet smell.

Fairly soluble in water.

Nitrogen (IV) Oxide.

Reddish brown.

Extinguishes a glowing splint.

Irritating pungent smell.

Readily soluble in water.

(Accept any 1 correct comparative)

(c) (i) It corrodes/reacts with rubber and cork.

(ii) I) Oxidized: Sulphur /S

Reduced: Nitric (V) acid /  $\text{HNO}_{(aq)}$

II) It decomposes by heat into  $\text{NO}_2$  which dissolves in the acid.

18. a) Pass air through purifiers to remove dust particles by electrostatic precipitation. Then pass it through conc. Sodium Hydroxide to absorb  $\text{CO}_2$ . Then through condensers at 25°C to

remove water vapour. It is further cooled to liquefy it. The liquefied air is then fractionally distilled to obtain oxygen at  $-183^{\circ}\text{C}$

- b) i) X – Ammonia//  $\text{NH}_3$   
Y- Air

iii) Through fractional distillation

RMM of  $\text{NH}_3 = 17$                       RFM of  $\text{NH}_4\text{NO}_3 = 80$

If 80g  $\text{NH}_4\text{NO}_3$  \_\_\_\_\_ 17 g  
960000 \_\_\_\_\_  $\frac{960000}{80} \times 17 = 2040\text{kg}$   
80 x 1000

19. (a) Potassium hydroxide solution  
(b) To remove dust particles  
(c) Water vapour    Moisture  
(d)  $-183^{\circ}\text{C}$   
(e) Fractional distillation of liquid air  
(f) Liquid air and passed through fractionating column, where nitrogen with lowest B.P  $-196^{\circ}\text{C}$  distils out first and liquid oxygen with highest distil out last.  
(g) Nitrogen in liquid form is used as a refrigerant e.g. in storing semen for artificial insemination  
- Used as a raw material in Haber process e.t.c  
II. Air is a mixture because:  
- It contains gases which are not chemically combined  
- The gases are not in fixed ratios.

21. a) Drying agent ✓  $\frac{1}{2}$  which must be  $\text{CaO}$   
Method of collection ✓ - upward delivery  
Workability ✓  $\frac{1}{2}$

22. a) Heat  
b)  $\text{Cu}(\text{g}) + \text{N}_2\text{O}(\text{g}) \longrightarrow \text{CuO}(\text{g}) + \text{N}_2(\text{g})$   
c) - Manufacture of ammonia  
- In light bulbs  
- As a refrigerant

23. – At  $113^{\circ}\text{C}$  consists of  $\text{S}_8$  rings that flow easily;

- Darkens due to breaking of  $S_8$  rings and forming long chains consisting of thousands of atoms. The chains also entangle;
  - The long chains consisting of thousands of atoms. The chains also entangle;
  - The long chains break near b.p. to form shorter one;
24. Difference is at the cathode electrode where in concentrated sodium chloride sodium is deposited while in dilute sodium chloride, hydrogen is liberated, because
25. (i)  $2N_2O(g) + C(s) \longrightarrow CO_2(g) + 2N_2(g)$   
 (ii) Ammonium chloride and sodium nitrate  
 (iii) The hydroxide ions  $\sqrt{1}$  (Ammonia dissolves forming ammonia hydroxide. (1 mk)
26. (a) E - Ammonium chloride ( $\frac{1}{2}$  mk)  
 F - Aluminium hydroxide ( $\frac{1}{2}$  mk)  
 (b)  $Al_3^+ + 3OH^-(aq) \longrightarrow Al(OH)_3(s)$
27. a) Zinc hydroxide  
 b)  $[Zn(NH_3)_4]^{2+}$   
 c)  $Zn^{2+}(aq) + 2OH^-(aq) \longrightarrow Zn(OH)_2(s)$
28. a) Platinum/platinum Rhodium  $\checkmark 1$   
 b)  $4NH_3(g) + 5O_2(g) \longrightarrow 4NO(g) \checkmark 1 + 6H_2O(l)$   
 c) - Fertilizers  $\checkmark 1$   
 - Preparation of Nitrogen (I) oxide.  
 - Explosives
29. Blue ppt  $\checkmark 1$  is formed which dissolves in excess to form a deep blue  $\checkmark 1$  solution due to formation of tetra amine Copper (II) ions
30. (a) - Finely divided iron impregnated by alumina ( $Al_2O_3$ )  
 - 200 atmosphere pressure  
 - Temperature of  $450^\circ C$   $\checkmark \frac{1}{2}$
- b) - CuO is reduced to Copper metal  
 -  $NH_3$  is oxidized to water and nitrogen
31. (a) Colour of copper (II) Oxide changes from black to brown  
 (b) (i) Nitrogen / $N_2(g)$   
 (ii) Water/ $H_2O(l)$

## 5. Sulphur and its compounds

1. (a) Frasch process  
 (b) Hot compressed air  
 (c) Monoclinic / prismatic sulphur /beta sulphur $\checkmark$   
 Rhombic/octahedral sulphur /alpha sulphur
2. (a) RFM of  $H_2SO_3 = 98$  (no units)  
 Number of moles of  $H_2SO_4 = \frac{1.8}{98}$   
 = 0.01837 moles

$$\text{Molarity of H}_2\text{SO}_4 = \frac{0.01837 \times 1000}{1} = 18.37\text{M} \quad \checkmark^{1/2}$$

(b) Apply formular;  $M \text{ conc.} \times \text{Vol conc.} = M \text{dil.} \times V \text{dil.}$   
 $18.37 \times V \text{ conc.} = 0.2 \times 500 \Rightarrow V \text{conc.} = \frac{0.2 \times 500}{18.37}$

$$= 5.44 \text{cm}^3 \text{ of conc. H}_2\text{SO}_4$$

3. (a) By dissolving in water  
 (b) – Manufacture of fertilizers  
 - Manufacture of detergents  
 - Cleaning of metal surfaces  
 - As an electrolyte in car batteries  
 - In refining of petroleum  
 - Manufacture of synthetic fibre (e.g. rayon)  
 - Manufactures of paints, dyes and explosives (award 1mk any one)
4. Chlorine bleaches permanently by oxidation  $\checkmark 1$  while sulphur (IV) oxide bleaches temporary by eduction.  $\checkmark 1$
5. (i) Weak acid  $\checkmark 1$   
 (ii) Has few free  $\text{H}^+$  (Hydrogen) ions
6. a) Vanadium (v) oxide  $\text{V}_2\text{O}_5 \quad \checkmark^{1/2}$   
 b)  $2\text{SO}_2(\text{g}) + \text{O}_2(\text{g}) \longrightarrow 2\text{SO}_3(\text{g}) \quad \checkmark^{1/2}$   
 c)  $\text{SO}_3(\text{g}) + \text{H}_2\text{SO}_4(\text{l}) \longrightarrow \text{H}_2\text{S}_2\text{O}_7(\text{l})$   
 $\text{H}_2\text{S}_2\text{O}_7(\text{L}) + \text{H}_2\text{O}(\text{L}) \longrightarrow \text{H}_2\text{SO}_4(\text{l})$   
 Student must explain Explanation 1 mark
7. – Concentrated sulphuric acid oxidizes copper turnings to copper(II) oxide black solid,  $\text{SO}_2$  gas and water.  $\frac{1}{2}$  mk  
 - Then copper (II) oxide reacts excess conc. sulphuric acid to produce copper (II) sulphate mk  
 - Which is dehydrated by conc. Sulphuric acid to an hydrous copper (II) sulphate white solid  $1\frac{1}{2}$   
 Which dissolves in water to produce blue solution
8. a) Method of collection is wrong.  $\checkmark^{1/2}$  Should be collected by downward delivery/upward displacement of air  $\checkmark^{1/2}$  since the gas is denser than air.  
 b)  $\text{Na}_2\text{SO}_3(\text{s}) + \text{H}_2\text{SO}_4(\text{aq}) \longrightarrow \text{Na}_2\text{SO}_4(\text{aq}) + \text{SO}_2(\text{g}) + \text{H}_2\text{O}(\text{l}) \quad \checkmark^1$   
 c) By passing it through calcium hydroxide in which the gas dissolves.  $\checkmark^1$
9. a) Dirty grey solids are formed.  $\checkmark^1$   
 b)  $\text{FeS}(\text{s}) + 2\text{HCl}(\text{aq}) \longrightarrow \text{FeCl}_2(\text{aq}) \checkmark^1 + \text{H}_2\text{S}(\text{g})$   
 c) Iron powder has high surface area hence the reaction is none vigorous than iron fillings with low surface area.
10. a) a sulphate e.g. sodium sulphate  $\checkmark^1$   
 b) moist blue litmus paper turns to red  $\checkmark^{1/2}$  then after some minutes to white  $\checkmark^{1/2}$  .it is bleached by

*sulphur(IV) oxide*

11. (a) – Flexible/~~e~~lastic  
– Strong and ~~to~~ugh  
– Non-sticky

(any two)

(b) Molten sulphur would have lost heat to the surrounding hence solidify/ in the middle pipe sulphur cannot solidify since hot air in the inner pipe and hot water in the outer pipe maintains high temperature.

12. (a) It dissolves in water releasing  $\checkmark 1$  a lot of heat which boils the acid which can easily be spilt to the body.  $\checkmark 1$  (2 mks)

(b) - It is used in manufacture  $\checkmark 1$  of batteries/acid accumulators. Any }  
- Manufacture of soap, plastics, detergents. (one) } 3

13. (a) Deposits of a yellow solid; and droplets of colourless liquid;  
(b)  $2\text{H}_2\text{S}_{(aq)} + \text{SO}_{(g)} \longrightarrow 2\text{H}_2\text{O}_{(l)} + 3\text{S}_{(s)}$   
(c) Oxidizing agent

14. (a) A – takes in hot compressed air to force out molten sulphur to the surface.  
B - takes out molten sulphur.  
C – takes in super heated water to melt the sulphur.

(b) Rhombic, Monoclinic

(d) Iron (II) sulphide.

(e) – Vulcanization of rubber.  
– Making chemicals  
– Manufacture of matches and fire works.

$$6.0 \text{ dm}^3 \left( \frac{1 \text{ mol} \times 6 \text{ dm}^3}{24 \text{ dm}^3} \right) \checkmark \frac{1}{2} = 0.25 \text{ mole } \checkmark \frac{1}{2}$$

From the equation :-

$$\text{Moles of O}_2 \text{ used} = \frac{0.25}{2} \checkmark \frac{1}{2} = 0.125 \text{ moles } \checkmark \frac{1}{2}$$

(iii) 1 mole of O<sub>2</sub> = 0.125

$$0.25 \text{ mole} = \left( \frac{24 \text{ dm}^3 \times 0.125 \text{ mol}}{1 \text{ mol}} \right) \checkmark 1$$
$$= 3. \text{ dm}^3 \checkmark 1$$

15. i) X – Rhombic  $\checkmark \frac{1}{2}$   
Y – Monoclinic  $\checkmark \frac{1}{2}$

- ii) I) Mg has a higher  $\sqrt{1}$   $\sqrt{1}$  affinity for combined oxygen than S.  
 II) Add  $\sqrt{1}$  dilute nitric acid to the mixture. It reacts with  $\text{MgO}$   $\sqrt{1}$  to form  $\text{Mg}(\text{NO}_3)_2$   
 Filter  $\sqrt{1}$  to obtain S as residue.

16. (a) (i) – Rhombic sulphur (½ mk)  
 (ii) Sulphur is heated until it boils. The boiling liquid sulphur is then poured into a beaker containing water to form plastic sulphur (½ mk)

(a)

- (i) – sulphur (½ mk)  
 - Iron (II) Sulphide (Iron pyrites)  
 - Zinc sulphide (Zinc blend)  
 - Dust or Arsenic compounds (½ mk)

(c) – Avoid poisoning of the catalyst (Avoid destruction of catalytic properties by impurities)

(e) (I) – Vanadinim (V) Oxide (½ mk)

(II) - Heat incoming air ( $\text{SO}_2$  & Air)

- Cools the  $\text{SO}_3$

(III) - The reaction between  $\text{SO}_2$  and water is highly exothermic which makes the solution boil to form a mist of dilute sulphuric (VI) acid which pollutes the environment

(g) I. –  $\text{SO}_2$

II- Un reacted  $\text{SO}_2$  is recycled

○ Absorbed by  $\text{Ca}(\text{OH})_2$  in tall chimneys

- Passed over hot carbon (IV) Oxide and sulphur which is recycled and Carbon (IV) Oxide released to the environment

(h) Manufacture of fertilizers

17.

(ii) I ion II sulphide or copper II Sulphur  
 II anhydrous Calcium Chloride (zero of Calcium chloride)

b)  $\text{Fe}^{3+}$  is reduced or  $\text{Fe}^{2+}$  or  $\text{Fe}^{2+}(\text{aq})$  ions and formed  
 $\text{H}_2\text{S}$  is oxidized to sulphur on sulphur is formed.

c) (i) Vanadium V oxide or platinised asbestos

(ii) I. The yield of  $\text{SO}_3$  increase because increase in pressure favour the forward reaction since less number of  $\text{SO}_3$

II. The yield of  $\text{SO}_3$  is the same because catalyst only speeds the rate at which equilibrium.

(iii) Exothermic reaction occurs. When dissolved in water produce acid spray (fumes) cause pollution.

18

(a) (i) Red-brown fumes

(ii) It is not an oxidizing agent

(iv) Neutralization

- (v) Sulphuric acid  
 (vi) Forms acid rain / plant + yellowing corrodes metallic and stone works

19. a) i) They are different physical/ structural forms of an element  
 ii) Transition temperature  
 b) i) X - Diluter  
 Y- Heat exchanger  
 Z- Roaster/ Burner  
 ii) Catalyst- Vanadium (v) Oxide,  $V_2O_5$   
 Temperature – 450C  
 Pressure – 1 atmosphere  
 iii) I - They are purified not to poison the catalyst  
 II - The reaction in the converter/ production of sulphur (vi) Oxide is exothermic/  
 heat is produced. Chamber Y is used to ensure temperature does not rise above 450°C  
 iv) Step 2:  $2S_{(g)} + O_{2(g)} \xrightarrow{\quad\quad\quad} 2SO_{2(g)}$  ✓1 mark  
 Step 3:  $SO_{2(g)} + H_2SO_{4(l)} \xrightarrow{\quad\quad\quad} H_2S_2O_7(l)$  ✓1 mark  
 Step 4:  $H_2S_2O_7(l) + H_2O(l) \xrightarrow{\quad\quad\quad} 2H_2SO_{4(l)}$  ✓1 mark
20. - Test tube L- Acidified  $KMnO_4$  changed from purple to colourless (it is decolourized) –  $SO_2$  is a  
 reducing agent. ✓1  
 - Test tube K  $H^+/KMnO_4$  was not decoloured –  $SO_2$  was absorbed by ash solution hence did  
 not reach the  $H^+/KMnO_4$ . ✓1
21. a) Metal sulphide  
 b) Hydrogen sulphide is less soluble in warm water compared to cold water
22.  $SO_2$  form acidic when it dissolves in atmospheric moisture. The acidic rain lowers soil PH/  
 corrodes stone building  
 No – disrupts the Ozone cycle hence causing depletion of Ozone layer which react with  
 oxygen in the atmosphere to form  $NO_2$  gas
23. a) The solution changed from brown/yellow ✓½ to light/pale green ✓½  
 b)  $2FeCl_3(aq) + H_2S(g) \longrightarrow 2FeCl_2(aq) + 2HCl(aq) + S(s)$  ✓1 mk  
 c) Oxidation. ✓1 mk
24. Barium carbonate reacts with dilute sulphuric (VI) acid to form the insoluble Barium  
 sulphate ( $BaSO_4$ ) which covers the reactant. Barium Carbonate preventing any contact  
 between the acid and the Carbonate salt.  
 Hence, the reaction is slow and stops after a very short time.  
 $BaCO_{3(s)} + H_2SO_{4(aq)} \longrightarrow BaSO_{4(s)} + CO_{2(g)} + H_2O(l)$

## Chlorine and its compounds

1. (i) It catches fire or presence white fumes  
 (ii)  $PCl_3$  // Phosphorous Trichloride  
 (iii)  $PCl_5$  // Phosphorous Pentachloride
2. (a) - In water hydrogen chloride dissociates to form hydrogen ( $H^+$ ) and chloride ( $Cl^-$ ) ions.  
 - The presence of  $H^+$  ions in aqueous solution of hydrogen chloride is responsible for acidic  
 properties which turns blue litmus paper red

- (b) – To increase the surface area for the dissolution of the gas  
 - Prevent suck back (Award full 1mk for any one given)
3. a) – Refrigeration ✓1  
 - Maintains pressure in aerosol cans and enables sprays to be sprayed in liquid form  
 b) – They deplete the ozone layer. ✓1  
 - They cause green house effect/Global warming.
4. a) Acidify water with nitric acid ✓½. Add aqueous lead nitrate/AgNO<sub>3</sub> ✓½  
 Formation of a white ppt. Show presence of Cl<sup>-</sup> white ppt of PbCl<sub>2</sub> or AgCl formed.
5. a) Yellow solid deposit of sulphur on the wall of boiling tube  
 b)  $H_2S(g) + Cl_2(g) \longrightarrow 2HCl(g) + S(s)$   
 c) - Done in fume chamber/ open air  
 -Poisonous gases
6. i)  $2Fe(s) + 3Cl_2(g) \longrightarrow 2FeCl_3(g)$   
 $Fe(s) + 2HCl(g) \longrightarrow FeCl_2(g) + H_2(g)$   
 N.B Must be balanced  
 State symbol must be correct  
 Chemical symbols must be correct
- ii) In the absence of moisture, chlorine cannot form the acidic solution, hence no effect on the blue litmus paper
- 7 a) Heat is necessary \* REJECT high temperature ACCEPT, BOIL or if implied  
 o MnO<sub>2</sub> is a weak oxidizing agent.  
 b)  $Cl_2O(g) + H_2O(l) \longrightarrow 2HOCl(aq)$  C.A.O
8. (a) Chlorine gas  
 (b)  $HCl(aq) + MnO_2 \longrightarrow MnCl_2(aq) + Cl_2(g) + 2H_2O(l)$   
 (c) The petals turn to white due to the bleaching effect of NaOCl(sodium hypochlorite)
10. (a) (i)  $MnO_2(s) + 4HCl(l) \longrightarrow MnCl_2(aq) + 2H_2O + Cl_2(g)$   
 Penalize ½mk if state symbols are not correct  
 ✓ 1 (ii)  $KMnO_4$  or  $PbO_2$
- n (iii) The Chloride gas can be dried by passing it through a wash-bottle of concentrated sulphuric acid and is then collected by downward delivery. ✓ 1
- (b)(i) A- Aluminium (III) Chloride  
 (ii)  $2Al(s) + 3Cl_2(g) \longrightarrow 2AlCl_3(s)$   
 Penalize ½mk for wrong state symbols  
 (iii) Moles Al used from the equation in b(ii)  
 $= \frac{0.84}{27} = 0.031$  Moles  
 Moles of Cl<sub>2</sub> used =  $\frac{0.031}{2} \times 3 = 0.047$
- Mark consequently from the equation
11. (a)  $Cl_2(g) + H_2S(g) \longrightarrow 2HCl(g) + S(s)$   
 (b) Yellow solid particles deposited in the flask ✓ ½  
 (c) Excess chlorine and hydrogen sulphide gas should not be emitted into the atmosphere because they are pollutants /harmful

12. (a) Chlorine gas
- (b) (i) Remove traces of hydrogen chloride gas  
(ii) Drying agent
13. (a)  $Fe^{3+}$   
(b) It is an oxidizing agent ✓  
(c)  $2Fe(OH)_3(s) \longrightarrow Fe_2O_3(s) + 3H_2O(l)$
14. (i) Anhydrous Calcium Chloride (½mks)  
(ii) A white ppt is formed  
HCl gas forms  $Cl^-$  ions solution which react with silver ions to form silver Chloride which is insoluble OR
- $$HCl(aq) + AgNO_3(aq) \longrightarrow HNO_3(aq) + AgCl(s)$$
- $$\longrightarrow Cl^-(aq) + Ag^+(aq) \quad \checkmark \quad AgCl(s)$$

## Acids, bases and salts

1. (a) Proton donor/electron acceptor/a substance which when dissolved in water dissociates/break to hydrogen ions as the only positive ion.  
(b) Water/  $H_2O$   
(c) It is a proton donor/electron acceptor
2. (i) Ethylbutanoate  
(ii)  $CH_3CH_2CH_2 \quad \begin{array}{c} C - O - CH_2 - CH_3 \\ || \\ \end{array}$   
(iii) Esters
3. (a) Temporary water hardness . This is because hardness is removed by boiling  
(b) - Provide  $Ca^{2+}$  ions needed in formation of strong teeth and bones  
- Hard water form a layer of carbonate of lead which prevent water coming in contact with lead which cause poisoning (award 1mk for any one)
4. Let x be the mass of  $FeSO_4$  crystals in saturated solution  
 $\therefore$  Mass of water =  $45 - x$  ✓  $\frac{1}{2}$  ✓  $\frac{1}{2}$   
X g of  $FeSO_4$  dissolves in (45-x)g of water  
100x of  $FeSO_4$  dissolves in 100g of water  
 $\frac{45 - x}{100x}$   
So, solubility is  $\frac{100x}{45 - x} \approx 15.65$   
 $100x = 15.56(45 - x)$   
 $100x + 15.65x = 15.65 \times 45$   
 $115.65x = 15.65 \times 45$   
 $x = \frac{15.65 \times 45}{115.65}$  ✓  $\frac{1}{2}$   
 $= 6.0895$   
So solubility = 6.09g of  $FeSO_4$  in 100g of water
5. (a)  $Ca(HCO_3)_2(aq) \longrightarrow CaCO_3(s) + CO_2 + H_2O(l)$   
or:-  $Mg(HCO_3)_2 \xrightarrow{\text{heat}} MgCO_3(s) + CO_2(g) + H_2O(l)$  (award 1mk for any)
- (b) - Addition of  $Na_2CO_3(s)$   
- Addition of  $Ca(OH)_2(s)$   
- Addition of aqueous ammonia (award 1mk each for any two; Total =2mks)
6. - Provides essential minerals e.g.  $Ca^{2+}$  for strong bones and teeth ✓1  
- It has a better taste
7. a) The acid is water  $H_2O$   
Reason  $H_2O$  has donated a proton ( $H^+$ )  
b)  $2H^+(g) + CO_3^{2-}(aq) \longrightarrow CO_2(g) + H_2O(l)$
8. Magnesium carbonate reacts with rain water

- Containing cobalt (iv) oxide dissolved.
- Forming magnesium hydrogencarbonate
- Or  $MgCO_3(s) + CO_2(g) + H_2O(l) + Mg(HCO_3)_2(aq)$

9. (a) Lead ions  $\checkmark 1$   
 (b) Lead (II) hydroxide  $\checkmark 1$   
 (c)  $[Pb(OH)_4]^{2-}$   $\checkmark 1$
10. a) Solubility of a salt is mass of a salt that dissolves in 100g of water at a given temperature.  $\checkmark 1$   
 b) Mass of Q that crystallizes out =  $19.0 - 7.4 \sqrt{1/2} = 11.6$  g.  
 Mass of R that crystallizes out =  $33 - 20.7 \sqrt{1/2} = 12.3$ g.  
 Total mass of crystals =  $12.3 + 11.6 \sqrt{1/2} = 23.9$ g  $\sqrt{1/2}$
11. Mass of dry salt =  $16.86 - 15.86 \sqrt{1/2}$   
 $= 1.00$ g  $\sqrt{1/2}$   
 Mass of water =  $26.86 - 16.86 = 10$ g  $\sqrt{1/2}$   
 Mass of salt in 60g of water =  $\frac{60 \times 1}{10} = 6$  g  $\sqrt{1/2}$
12. (a) This is the maximum mass of a salt that will dissolve in 100g of water of a given temperature  
 (b) 15g dissolve in 25cm<sup>3</sup> water  
 ? dissolve in 2100cm<sup>3</sup> water  
 $= \frac{15 \times 100}{25} = 60$ g/100g water  
 (c) (i) in graph paper  
 (ii) Every point on the solubility curve is a saturated point of a solution which contains a maximum amount of salt X at a graph temperature  
 (iii) I 16g  $\checkmark$   
 II 25g  $\checkmark$   
 (iv)  $25 - 16 = 9$ g/100g water  $\checkmark$   
 (v) - Extraction of Na<sub>2</sub>CO<sub>3</sub> from Lake Magadi  
 - Extraction of NaCl from sea water
13. Add Methyl benzene to the mixture and stir to dissolve iodine. Filter and crystallize the filtrate to obtain sodium chloride crystals.
14. (a) (ii) 72g /100g water  $\pm 1.0$   
 (iii) 100cm<sup>3</sup> dissolve 72g  
 1000cm<sup>3</sup> dissolve =  $\frac{(1000 \times 72)}{100}$   
 $= 720$ g/l  $\checkmark 1/2$   
 $KClO_3 = 39 + 35.5 + 3 \times 16 = 122.5$   
 molarity =  $\frac{720 \text{g/l}}{122.5 \text{gmol}^{-1}}$   $\checkmark 1/2$   
 $= 5.878$ mol/l  
 (iv) Mass dissolved at 62° = 116g  
 Mass dissolved at 42° = 66g  $\checkmark 1/2$   $\checkmark 1$   
 mass crystallized out = 50g  
 (b) (i)  $\frac{(25 \times 0.2M)}{1000} = 0.005$ mol  $\checkmark 1/2$   
 (ii) 0.005mol (mole ratio Acid: Base = 1:1)

$$\begin{aligned} \text{(iii) } 20\text{cm}^3 \text{ contain } 0.005\text{mol} \\ 25\text{cm}^3 \text{ contain} &= \frac{(250\text{cm}^3 \times 0.005\text{mol})}{20\text{cm}^3} \\ &= 0.0625\text{mol} \end{aligned}$$

$$\text{(iv) Mass} = (0.0625 \times 40\text{g mol}^{-1}) = 2.5\text{g}$$

$$\text{(v) Mass of solvent} = 28\text{g} - 2.5\text{g} = 25.5\text{g}$$

$$\begin{aligned} \text{solubility} &= \frac{(100 \times 2.5)}{25.5} \\ &= 9.804\text{g}/100\text{g water} \end{aligned}$$

15. a) Solubility refers to the maximum mass of solute dissolving in a 100g of a solvent at a particular temperature

b) i) Fractional crystallization

ii) Scale = 1 mk

Plotting = 1 mk

Curve L = 1 mk

Curve M = 1 mk

iii) I = Actual value from students curve + 1C

II = Actual value from students curve + 1

$$\text{iv) Mass per litre} = \frac{1000 \times \text{Actual value in iii (II)}}{100}$$

$$\begin{aligned} \text{Concentration} &= \frac{\text{Above answer}}{132} \\ &= \text{M} \end{aligned}$$

16. (a) (i) Conductivity decreases since  $\text{H}^+$  ions from the acid are neutralized by  $\text{OH}^-$  ions from the base. This reduces the concentration of ions available for conductivity.  
(ii) Conductivity increases since the  $\text{OH}^-$  ions accumulate after complete neutralization of the acid.  $\text{OH}^-$  increases conductivity.  
(iii) Neutralization leads to the formation of a salt. The ions in the salt are responsible for conducting of electricity.  
(iv) They yield different concentration of  $\text{H}^+$  ions  
For  $\text{HNO}_3$  – dissociates completely hence more  $\text{H}^+$  ions  
 $\text{HCOOH}$  – dissociates partially hence less  $\text{H}^+$  ions

$$\begin{aligned} \text{moles of HCOOH} &= \frac{50 \times 0.1}{1000} \\ &= 0.005\text{moles} \end{aligned}$$

mole ratio acid : base

2 : 1

$$\text{moles of Na}_2\text{CO}_3 = \frac{0.005}{2}$$

$$= 0.0025$$

$$\begin{aligned} \text{Molarity of Na}_2\text{CO}_3 &= \frac{0.0025 \times 1000}{20} \\ &= 0.125\text{M} \end{aligned}$$

17. a) i) I) Heating  $\sqrt{1}$   
II) Filtration.  $\sqrt{1}$   
ii) Effervescence  $\sqrt{1}$  / Bubbles.

iv) Pass the water vapour over white anhydrous ✓1 Copper (II) sulphate. It turns blue. ✓½

b) i) R is a mixture of sulphur ✓½ and insoluble ✓½ salt. It forms ✓1 a filtrate and residue in filtration of mixture

ii) Carbonate ✓1 /  $CO_3^{2-}$  ✓1

It produces  $CO_2$  on reaction with  $H^+$

iii)  $Zn^{2+}$  ✓1  $Al^{3+}$  ✓1

18. a) The quantity of a substance in grammes that can dissolve in 100g of water at a given temperature

b) i) Fractioned crystallization

ii)

iii)

I 26C

II 18g

iv) 1 mole of salt M \_\_\_\_\_ 132g

$$\frac{18 \times 1}{132} = 0.13863636 \text{ moles}$$

$$\text{Concentration} = \frac{1000 \times 0.13863636}{100}$$

$$= 1.386M$$

v) L = 20g M = 19g

$$38 - 20 = 18$$

$$22 - 19 = 3+$$

Total 21 g

19. (a) (i) A saturated solution is one which cannot dissolve more solute at that particular temperature.

✓1

(1 mk)

(ii) Solubility of a soluble is the amount of grams of solute present in 100g of water at that particular temperature. ✓1

(1 mk)

(b) (i)  $Mole = M \times \frac{V}{1000}$

$$0.1 \times \frac{24}{1000} \checkmark 1 = 0.0024 \text{ moles } \checkmark 1$$

(2 mks)

(ii) Moles of NaCl in  $25cm^3$

Mole ratio is 1 : 1

$$\text{Moles of NaCl} = 0.0024 \text{ moles } \checkmark 1$$

(1 mk)

(iii) Moles of NaCl in  $500 cm^3$

If  $25cm^3 = 0.0024 \text{ moles}$

$$\therefore 500 cm^3 = ?$$

$$= \frac{500 cm^3}{25 cm^3} \checkmark 1 \times 0.0024 \text{ moles}$$

$$= 0.048 \text{ moles } \checkmark 1$$

(2 mks)

(iv) Mass of NaCl in  $10cm^3$

Mass = moles x R.F.M.

$$= 0.048 \times 58.5 = 2.808g$$

$$\begin{aligned}
 \text{(v) Mass of water} &= \text{mass of solution} - \text{mass of NaCl} \\
 &= (10.70 - 2.808)\text{g} \quad \checkmark 1 \\
 &= 7.892 \text{ g} \quad \checkmark 1
 \end{aligned}$$

(2 mks)

$$\begin{aligned}
 \text{(vi) If } 7.892 \text{ of H}_2\text{O} &\longrightarrow 2.808\text{g} \quad \checkmark 1 \\
 100\text{g of H}_2\text{O} &\longrightarrow ? \\
 \frac{100\text{g} \times 2.808}{7.892\text{g}} &\quad \checkmark 1 \\
 &= 35.6\text{g} / 100\text{g of H}_2\text{O} \quad \checkmark 1
 \end{aligned}$$

20. Add 100cm<sup>3</sup> of 2M  $\checkmark$ potassium hydroxide or 200cm<sup>3</sup> of 1M potassium hydroxide to the acid. Heat the solution until it is saturated and cool to obtain crystals. Dry the crystals between filter papers

21. (a) 139g of solution contains 39g solute  
 $\therefore 90\text{kg of solution contains } \frac{39 \times 90}{139} = 25.25\text{g}$

Mass of solvent = 90 - 25 = 64.75g  
 (b) 80°C

22. (a) Calcium hydrogen carbonate/Magnesium hydrogen carbonate;  
 (b) Water boils off and is condensed leaving the salt;  
 (c) Provides minerals used to strengthen bones

23. (a) Delivery tube should not dip into solution  
 - Thistle funnel should dip into the solution  
 - Gas jar was no water/ little water in trough (1 each max 2)  
 (b) Oxygen

24. a) acidity water with Nitric add aqueous lead nitrate or  
 - silver nitrate formation of white precipitates shows presence  
 penalize fully for uric acid 1 ½ mk of chloride ions  
 b) provide essentials minerals e.g. Ca<sup>2+</sup> ions

25. a) I- Cu (OH)<sub>2</sub> or copper (II)hydroxide  $\checkmark 1$   
 b)  $[\text{Cu}(\text{NH}_3)_4]^{2+}$   $\checkmark 1$   
 c) Hydrogen sulphide or H<sub>2</sub>Sg  $\checkmark 1$

26. i) this is the maximum mass of a salt that will dissolve in 100g of water at a given temperature  $\checkmark 1$   
 ii) 15g dissolve in 25cm<sup>3</sup> water  
 xg dissolve in  $\frac{(15 \times 100)}{25}$ g  $\checkmark 1$   
 = 60g/100g  $\checkmark 1$

27. (a) Diagrammatical presentation on how to prepare an aqueous solution of hydrogen chloride gas

(b) Ammonia gas

\*MAT

28. Mass of saturated soln. =  $42.4 - 26.2 = 16.2$   
Mass of dry solid Y =  $30.4 - 26.2 = 4.2\text{g}/12.0$   
Solubility of Y =  $\frac{4.2 \times 100}{12.0}$   
35g per 100g of water  
(b) – Used is fractional crystallization of salt mixture.
29. (a)  $24 - 19 = 5\text{g}$  of substance K will be produced  
Reason: Solubility decreases with increase in temperature  
(b) Gaseous state
30. Deep red solution will be formed. Equilibrium shifts to the right/forward reaction is favoured since  $\text{Fe}^{3+}$  ions favours forward reaction.
31. a) They became a white powder  
b) Efflorescency
32. a) calcium hydrogen carbonate/ magnesium hydrogen carbonate  
b)  $\text{Ca}(\text{LHCO}_3)_{2(aq)} + \text{Na}_2\text{CO}_{3(aq)} \longrightarrow \text{CaCO}_{3(g)} + 2\text{NaHCO}_{3(aq)}$   
 $\text{Mg}(\text{HCO}_3)_{2(aq)} + \text{Na}_2\text{CO}_{3(aq)} \longrightarrow \text{CaCO}_{3(g)} + 2\text{NaHCO}_{3(a)}$   
c) Contains  $\text{Ca}^{2+}$  ions needed to harden teeth and bones
33. HCl g in water ionizes to produce  $\text{H}^+_{aq}$  and  $\text{Cl}^-_{aq}$   
HCl (g) in methylbenzene remain as moles hence no  $\text{H}^+$  ion
34. (i) Weak acid ✓1  
(ii) Has few free  $\text{H}^+$  (Hydrogen) ions
35. (i) The reaction is too exothermic that alot of heat is produced causing ignition of hydrogen in presence of oxygen  
(ii)  $\text{K}_{(s)} + \text{H}_2\text{O}_{(g)} \longrightarrow \text{KOH}_{(aq)} + \text{H}_2_{(g)}$   
 $\text{H}_2_{(g)} + \text{O}_2_{(g)} \longrightarrow \text{H}_2\text{O}_{(g)}$
36. (i) Sample 1 and 2  
(ii) Sample 2 contained ions that caused temporary hardness therefore required large ( volume of soap solution before boiling, but after boiling the temporary hardness was removed, hence requiring very little volume (  $\frac{1}{2}\text{mk}$ ) of soap solution to lather.
- 37.- KOH has higher pH value than ammonia  
- KOH is a stronger base; dissociates fully  $\frac{1}{2}$   
- Ammonia solution is a weak base; dissociates partially  $\frac{1}{2}$

### Energy changes in chemical and physical processes

1. (a)  $\Delta H = \frac{120 \times 4.2 \times 4.5}{1000}$  ( $\frac{1}{2}\text{mk}$ )  
= + 2.268KJ✓ ( $\frac{1}{2}\text{mk}$ )

(b)  $RFM \text{ of } KNO_3 = 39 + 14 + 48 = 101$   
 $6g \rightarrow 2.268KJ$   
 $101g \rightarrow \frac{101 \times 2.268}{6} \checkmark \quad (\frac{1}{2}mk)$   
 $= +38.178KJ \text{ mol}^{-1} \checkmark \quad (\frac{1}{2}mk)$

2. (i) Heat evolved when one mole of a substance is completely burnt in oxygen

(ii)  $RFM \text{ of } C_2H_5OH = 46$

Molar mass  $\checkmark \frac{1}{2} = 46g$

Heating value =  $1370 KJ$

$$= \frac{46g}{46g} \times 1370KJ \checkmark \frac{1}{2}$$

= 29.78KJ/g (with units)

3.  $Ca(q) + C(q) + 3/2 O_2 (g)$

4. a)  $C_2H_6O(l) + 3O(g) \rightarrow 2CO_{2(g)} + 3H_2O$

b)  $DH = MCDT$

$$\frac{200 \times 4.2 \times 32.5}{1000} = -27.3Kj$$

1000

$$0.92g \text{ C}_2\text{H}_6\text{O} \rightarrow -27.3Kj$$

$$46g \text{ " } \rightarrow ?$$

$$\frac{46g \times 27.3Kj}{0.92} = -1365Kj$$

$$DHC \text{ C}_2\text{H}_6\text{O} = -1365Kj \text{ mol}$$

5. i) U,V,Y,Z All the 4 or nay 3 exclusively correct penalize  $\frac{1}{2} mk$  if wrong answer

ii) YZ is/are included any 2 correct  $\frac{1}{2} mk$

6. (a)  $611-389 = +222KJ$

(b)  $H = +222 - (611 - 100) \checkmark \frac{1}{2}$

$$= -289KJ$$

(c) Exothermic reaction  $\checkmark \frac{1}{2}$

$$\Delta H_f + \Delta H_3 = \Delta H_1 + \Delta H_2$$

$$\therefore \Delta H_f = \Delta H_1 + \Delta H_2 - \Delta H_3 \checkmark \frac{1}{2}$$

$$= -393 \times 2 + -286 \times 3 + 1386 \checkmark$$

$$= -786 - 858 + 1386$$

$$= -1644 + 1386 \checkmark$$

$$\Delta H_f = -258 KJmol^{-1} \checkmark \frac{1}{2}$$

8. a) i) the yield of  $NH_3$  would be lowered  $\checkmark \frac{1}{2}$  any supply of heat makes  $NH_3$  to decompose to

$N_2$  and  $H_2$

ii) the yield of  $NH_3$  would be increased

b) a catalyst accelerates the rates of both forward and reverse reactions equally  $\checkmark^{1/2}$ . Equilibrium position is not affected by a catalyst  $\checkmark^{1/2}$

c)

9. a) Breaking of 'C = C' = +610 KJ

Breaking of 'Br - Br' = +193  
803  $\checkmark$

Formation of 2C - Br = -560

Formation of c-c +243 KJ

-346  
-103KJ  $\checkmark$

2 marks

b) Addition reaction/ halogenation  $\checkmark$

10. H H

Bond breaking

$$4 C-H - 4 \times 410 = 1640$$

$$C = C - 1 \times 610 = 610$$

$$H - H - 1 \times 436 = 436$$

$$\begin{array}{r} 2686 \\ H = 2686 - 2805 \\ = -119 \text{ KJ/Mol} \end{array}$$

Bond formation

$$6 C - H \quad 6 \times 410$$

$$= 2460$$

$$C - C - \quad \frac{345}{2805}$$

11. (i) Graph

labeling - \*TZM\*

plotting - \*TZM\*

scale - \*TZM\*

line - \*TZM\*

total 5mks

(ii) Shown on the graph - \*TZM\*

(iii) Heat change = MCT

$$= \frac{50 \times 4.2 \times 10.2}{100}$$

$$= 2.142 \text{ kJ}$$

(iv) RFM of  $KNO_3 = 39 + 14 + 48$

$$= 101$$

$$H = 2.142 \times \frac{101}{20.2} = -10.71 \text{ KJmol}^{-1}$$

12. 
$$MCT = \frac{100 \times 4.2 \times 6}{1000} = 2.52 \text{ Kj}$$

$$\text{Moles of } NH_4NO_3 = \frac{1.6}{80} = 0.02 \text{ moles}$$
If 0.02 mol \_\_\_\_\_ 2.52 Kj  
1 mol \_\_\_\_\_  $\frac{1 \times 2.52}{0.02} = +126 \text{KJ/ mol}$

ii) Amphoteric oxide

iii) Element H has a giant atomic structure with strong covalent bonds throughout its structure while D has simple molecular structure with weak Vander wall forces (2 m)

iv) - Used in advertising signs (Advertisements)

- Used in florescent tubes

(Any two correct use)

v) C has a smaller atomic radius than B because it has stronger nuclear charge// more number of protons which attract the outer energy level electrons more firmly (2 mks)

Moles of L =  $\frac{11.5}{23} = 0.5 \text{ moles}$

Moles of O<sub>2</sub> =  $\frac{0.5}{4} = 0.125 \text{ moles}$

Volume of O<sub>2</sub> =  $0.125 \text{ mol} \times 24 = 3 \text{ dm}^3$

If 4 x 23g \_\_\_\_\_ 24dm<sup>3</sup>

11.5g of L \_\_\_\_\_  $\frac{11.5 \times 24}{4 \times 23} = 3 \text{ dm}^3$

14. (a) Drawn on the graph

A =  $\frac{1}{2} \text{ mk}$

S =  $\frac{1}{2} \text{ mk}$

P =  $\frac{1}{2} \text{ mk}$

C =  $\frac{1}{2} \text{ mk}$

b)  $32.5^\circ C \pm 1$  Read from the student's correctly plotted graph.

c)  $20^\circ C \pm 0.5$  Line is extrapolated downwards from the student's correct graph.

d) It is end point/ complete neutralization.

e) The reaction is exothermic hence as reaction proceeded more heat was produced.

f) Reaction was complete hence solution lost heat through radiation to the surrounding.

g)  $10.2 \text{ cm}^3 \pm 0.1$ . Read from the student's correct graph.

h) Moles =  $\frac{M \times V}{1000}$

=  $\left( \frac{10.2 \times 4}{1000} \right)^{\sqrt{1/2}} = 0.0408 \text{ moles } \sqrt{1/2}$

i) Moles =  $\left( \frac{M \times V}{1000} \right)$

$$= \frac{2 \times 20}{1000} \sqrt{1/2} = 0.04 \text{ moles } \sqrt{1/2}$$

k)  $\Delta H = MC \Delta t$   
 $= \frac{-30.2 \text{g} \times 4.2 \text{J} \times 16.3}{\text{g}^\circ\text{C}}$   
 $= -2067.49 \text{J } \sqrt{1/2}$

Ans. in (h) = -2067.49 J.

$\therefore 1 \text{ Mole} = \frac{1 \times 2067.49 \text{J } \sqrt{1/2}}{\text{Ans in "h"}}$  e.g.  $\frac{1 \times 2067.49}{0.0408}$   
 $= -\text{Ans.}$  e.g.  $50673.82 \text{ J mol}^{-1}$   
 Or  $50.67382 \text{KJ mol}^{-1} \sqrt{1/2}$

15. a)(ii) Max. temperature attained :  $29^\circ\text{C}$   
 (iii) Temperature change of the reaction =  $(29-115)^\circ\text{C}$   
 $= 14^\circ\text{C}$

Mass of NaOH used =  $(114.35 - 108.15) \text{g}$   
 $= 6.2 \text{g}$

R.F.M of NaOH = 40g  
 Moles of NaOH used =  $\left[ \frac{6.2}{40} \right] \text{ moles}$   
 $= 0.155 \text{ moles}$

(v) Heat released =  $\frac{\text{Mass} \times \text{Specific Heat capacity} \times \text{Temperature change}}$

Mass of water used =  $(108.15 - 8) \text{g}$   
 $= 100.15 \text{g}$

$\therefore \text{Heat released} = \left[ \frac{100.15 \times 4.18 \times 14}{1000} \right] \text{ kJ}$

$= 100.15 \text{kJ}$   
 $\frac{0.155 \text{ moles NaOH}}{1 \text{ mole NaOH}} \longrightarrow \frac{5.861 \text{ kJ}}{\left[ \frac{1 \times 5.861}{0.155} \right] \text{ kJ mole}^{-1}}$

$= -37.8 \text{ kJ mol}^{-1}$

- (b) i)  $\Delta H_3$  and  $\Delta H_4$   
 ii) Condensation  
 iii)  $\Delta H = \Delta H_1 + \Delta H_2 + \Delta H_3 + \Delta H_4$   
 iv) Exothermic.

16. I – a – Latent heat of fusion is the heat change that occurs when one mole of a solid substance

- changes into liquid at constant temperature.
- Latent heat of vapourization is the heat change that occurs when one mole of liquid substance changes into gas at constant temperature.
- b – BC – The liquid loses heat as it cools hence decrease in kinetic energy of the particles
- CD - The liquid changes to solid as temperature remains constant at freezing point.

II. (i) Scale – \*TQM\*

Plot – \*TQM\*

Line

(ii) Should be shown on the graph – if not shown penalize ( 1/2 mk)

(iii) Heat change =  $m \times c \times \Delta T$

Where  $m = (\text{vol. of acid } (20\text{cm}^3) + \text{volume of bas in (b) above}) \times 1\text{g/cm}^3$

$\Delta T$ -as read form the graph

(iv) moles of acid

$$\text{Moles of base} = \frac{0.5 \times \text{volume in (b) above}}{1000}$$

Mole ratio acid: Base = 1:1

Moles of acid  $\longrightarrow$  heat change in (iii)above

1mole  $\longrightarrow$  ?

$$\text{Molar heat change} = \frac{1 \times \text{heat in (iii)}}{\text{Moles of acid}}$$

17.  $Q = 40000 \times 60 \times 60 = 144000000\text{c}$

Mass of Al =  $\frac{144000000 \times 27}{3 \times 96500}$  ✓ 1

$$= 13.43\text{kg} \quad \checkmark 1$$

18. (a) (i) Contains methane which is a fuel or contains methane which can burn

(ii) Pass a known volume of biogas through Sodium hydroxide (Potassium hydroxide) solution to absorb Carbon (IV) Oxide. Measure the volume of remaining gas

$$\% = \frac{\text{Volume of methane}}{\text{Volume of Biogas}} \times 100$$

19. a) No effect – Reaction is not accompanied by volume changes/ similar volumes of reactants and products

20. a) – carbon IV Oxide;

- Sulphur IV Oxide;

- Lead;

(b) Availed low sulphur diesel/ availed unleaded petrol

21. (a) Heat change that occurs when one mole of hydrogen combines with one mole of hydroxide ions. //Heat evolved when one mole of water s formed during reaction of  $\text{H}^+$  and  $\text{OH}^-$  ions

(b) HCl produces a higher temperature rise than oxalic acid;

HCl is a stronger acid than oxalic acid;

✓ 1

$$\begin{aligned}
 &= -242 - (-286) \quad \checkmark \frac{1}{2} \\
 &= -242 + 286 \quad \checkmark 1 \\
 &= +44 \text{ KJ/mol} \quad \checkmark 1 \quad (\text{No units of sign} = \frac{1}{2} \text{mk})
 \end{aligned}$$

23. (a) Chemical substance that burns to produce useful amount of heat.  
 (b) (i) Its cheap  
 (ii) Its readily available ( $\frac{1}{2}$ mk)  
 (iii) It burns slowly ( $\frac{1}{2}$ mk)  
 (iv) Does not produce poisonous gas. ( $\frac{1}{2}$ mk)
24. a) Metallic beaker would make most of the heat be lost to the environment  
 b) - Thermometer reading increased  
 - The reaction is exothermic
25. a) A substance that produce heat energy when burnt  
 b) 1. Availability  
 2. ease of transport
26. a) 1 mole Fe (56) required  $\frac{15.4 + 354}{56}$   
 $= 396.5 \text{ KJ}$   
 $\frac{10,000 (10 \text{ kg})}{56 \text{g}} \times 396.5 \text{ KJ} = ?$   
 $= 6596.285 \text{ KJ}$   
 b)  $\frac{-68 \text{ KJ}}{2} = -34 \text{ KJ} \quad \checkmark \frac{1}{2}$
27. a)  $\Delta H_1$  – Lattice energy  $\checkmark 1$   
 $\Delta H_2$  – Hydrogen energy  $\checkmark 1$   
 b)  $\Delta H_3 = \Delta H_2 + \Delta H_1 \quad \checkmark 1$

### Reaction rates and reversible reactions

1. colour changes from red to blue  
 $\text{H}_3\text{O}^+$  ions and  $\text{L}^-(\text{aq})$  ions which form red solution.
2. (a)  $\Delta H_4$  – latent heat of fusion  
 (b)  $\Delta H_3$  - is negative particles lose heat/process is exothermic/heat is given out (any)  $\checkmark$

$$\begin{aligned}
 \Delta H_R &= 860 + 675 \quad \checkmark \frac{1}{2} \\
 &= -185 \text{ KJ} \quad \checkmark \frac{1}{2}
 \end{aligned}$$

Reaction path.  $\sqrt{1/2}$  for both axes

4.

- Graph should be less steep (showing lower reaction rate since HCl is less concentrated).  $\sqrt{1/2}$   
 b) Graph flattens out at BC showing that all the magnesium has been used up, hence, no reaction is taking place  $\sqrt{1/2}$  and there is therefore no evolution of hydrogen gas.  $\sqrt{1/2}$  The volume of the gas, therefore, remains constant.  $\sqrt{1/2}$

5. a) Pale yellow liquid is observed.  $\sqrt{1}$  Backward reaction is favoured since  $\sqrt{1/2}$  it is exothermic. Dinitrogen tetra oxide liquefies  $\sqrt{1/2}$  at very low temperature to pale yellow liquid.  
 b) Pressure increase, and favours backward reaction  $\sqrt{1/2}$  which is at lower pressure; hence equilibrium shifts to the right.  $\sqrt{1/2}$

6. a)  $Mg(s) + 2 HCl(aq) \longrightarrow MgCl_2(aq) + H_2(g)$   $\sqrt{1}$   
 b)

c) (i) Showing on the graph.  $\sqrt{1/2}$  X Answer  $\sqrt{1/2}$   
(ii) Showing on the graph.  $\sqrt{1/2}$  Answer  $\sqrt{1/2}$

d) i) The rate of reaction increases.  $\sqrt{1}$

The surface area of particles has been increased  $\sqrt{1/2}$  thus increasing the area  $\sqrt{1/2}$  of contact of the reacting particles.

ii) The rate of reaction increases.  $\sqrt{1}$

Increase in temperature results in crease in the kinetic energy of the particles. This makes the particles move faster and collide more frequently with sufficient energy to cause more effective collision per given time.  $\sqrt{1}$

7. I a) Drawn on graph paper

$$A = \frac{1}{2} mk$$

$$S = \frac{1}{2} mk$$

$$P = 1 mk$$

$$C = 1 mk$$

b) Rate of evolution of hydrogen gas increases with increase in length of magnesium ribbon.

c) Read from the student's graph. 1 mk – showing on graph  
1 mk – for answer.

d) Shown on the graph paper.

II a)(i) Curve I Reason: F increases as E decreases.

(ii) Equilibrium is achieved.

8.  $Q = 40000 \times 60 \times 60 = 144000000c$

$$\text{Mass of Al} = \frac{144000000 \times 27}{3 \times 96500} \quad \checkmark 1$$
$$= 13.43kg \quad \checkmark 1$$

9. a) Hydrochloric acid is a weaker oxidizing agent which cannot oxidize copper to form Nitrogen (VI) Oxide gas

b) It increases  $\sqrt{1}$  mark

Molecules/ particles acquire the necessary activation energy// Kinetic energy. This increases the frequency of collisions hence the rate of reaction  $\sqrt{1/2}$  mark

c) Graph - Scale 1 mark with axis well labeled

- Plotting + all points correct 1 mark

5 correct points  $\frac{1}{2}$  mark

Less than 5 points 0 mark

Correct smooth curve 1 mark

TOTAL 3 marks

d) i)  $360cm^3$  Read correct value from graph + .05

ii)  $40cm^3 =$  Value from graph + .05

Read where it levels off

10. (a)  $\frac{260 - 85}{2} = \frac{175}{2} = 87.5cm^3/mn;$

(b) 4  $\frac{1}{2}$  min;

(c) Zinc was used up /  $H_2SO_4$  used up;

11. (a) **Platinum / Platinum Rhodium**  
 (b) **Pressure -9atm ( 1/2 mk)**  
**Temp – 700°C – 900°C ( 1/2 mk)**  
 (c) **Reaction is exothermic**

12. (a) (i) **Will increase;**  
 (ii) **Decrease;**

13.

- **Dissolve solid  $\sqrt{1/2}$   $YSO_4$  to obtain  $\sqrt{1/2}$   $YSO_4$  in solution,**
- **Dissolve  $\sqrt{1/2}$   $X(NO_3)_2$  in water to obtain  $\sqrt{1/2}$   $X(NO_3)_2$  solution.**
- **Mix the two above solutions**
- **Filter to obtain  $XSO_4$  solid residue, rinse with water and dry by heating  $\sqrt{1/2}$**
- **under asbestos pad.**

3

14.  $R_{(s)} + S^{2+}_{(aq)} \longrightarrow R^{2+}_{(aq)} + S_{(s)} \quad \sqrt{1} \text{ (1 mk)}$   
*E.m.f* =  $0.47 - (-2.04)$   
 =  $-0.47 + 2.04$   
 =  $1.57V \quad \sqrt{1}$  (1 mk)

} 2

15. (a) – **Water level rises.  $\sqrt{1}$**   
**Grey Iron wool changes to brown.  $\sqrt{1}$**   
 (b) – **Oiling and greasing.  $\sqrt{1}$**   
**- Painting.**

(1 mk)  
 (1 mk)  
 (1 mk)

} 3 (any one of these scores)

16. (a) **L is more ionized  $\sqrt{1}$  than K hence reacts faster  $\sqrt{1}$  producing higher volume of a gas. Or L is a stronger acid therefore ionized faster than K a weaker acid**  
 (b) **Increasing the temperature  $\sqrt{1}$  using zinc powder/increasing the concentration of acid.**

3

17. **Energy of reaction = Bond breakage + Bond formation.  $\sqrt{1}$**   
**Bond formation = Energy of reaction – Bond Breakage**  
 =  $-287 - 931 \quad \sqrt{1}$   
 =  $- 1218 \text{ K Joules per mole. } \sqrt{1}$  (3 mks)

} 3

18. – **No effect on the position of the equilibrium**  
 –  **$RXM$  is neither endothermic nor exothermic hence not affected by changes in temperature enthalpy is zero.**

21. a) the minimum energy required by the reaction particles to cause a successful collision to form product

b) i)

NB. I) Sketch curve should be to the left and both flatten not at the same final volume

ii) curve is stop to the left due to the size of particles of ground compound  $x_1$  is reduced,  $\sqrt{1/2}$  increasing surface area  $\sqrt{1/2}$  of the particles thus increasing area of contact of

22 At equilibrium there will be very little of T that has reacted.  $\sqrt{1}$  At equilibrium there will be a lot of T and very little V produced hence equilibrium lies to the left or forms the reactants  $\sqrt{1}$

23. -  $CB_2$

- Ionic bond

24. - Intensity of red-brown fumes increases.

- High temperature vapourizes liquid nitrogen tetra-oxide to form nitrogen (IV) oxide that is red-brown.

25. a) Curve 1

b) After sometime, the rate of formation of  $CaCl_2$  or rate of depletion of  $CaCO_3$  become to low that cant be evaluated

26. a) Equilibrium shifts o the left, more  $CO_2$  formed

(Increase in pressure favors reaction producing fewer molecules)

b) Equilibrium shifts to the left, more  $CO_{2(g)}$  formed

27. The solution turns yellow. Equilibrium shifts to the left when NaOH is added, the

$OH^-$  ions react with  $H^+$  ions forcing more of  $Cr_2O_7^{2-}$  and  $H_2O$  to react forming more

$H^+$  and  $CrO_4^{2-}$  ions the reaction particles causing higher rate of reaction and twice shorter time  $\sqrt{1/2}$

28. (i) B ; The acid had higher concentration (1/2mk)

(ii) The rate of reaction is initially high (1/2mk) because of high concentration of the reactant but decreases (1/2mk) steadily as the concentration also decreases.

29. Yellow/brown colour of bromine water ((1/2mk) fades or becomes colourless because sodium hydroxide solution provides  $OH^-$  ions which reacts with  $H^+$  ions to form water (1/2mk) shifts the equilibrium to the right

## Electrochemistry

1. i) Carbon – carbon/ platinum – carbon

ii) - The concentration of magnesium sulphate increase

- Hydrogen and oxygen given off at the electrodes reduce the water content

2.  $Cu^{2+} + 2e^- \rightleftharpoons Cu_{(s)}$

$$\text{Mass} = 1.48 = \frac{63.5 \times I \times 2.5 \times 60}{2 \times 96500}$$

$$I = \frac{1.48 \times 2 \times 96500}{63.5 \times 2.5 \times 60} = 29.988 \text{ A}$$

3. a) Anode is electrode A  
B is cathode

(1 mk)

c) The acid becomes more

4. i)  $200 \times 58 \times 60 \text{ C} \longrightarrow 64.8 \text{ g} \sqrt{1/2}$   
 $9500 \text{ C} \longrightarrow 27 \text{ g} \sqrt{1/2}$

$$\frac{27 \times 200 \times 58 \times 60}{64.8 \times 96500} \sqrt{1/2} = +3 \sqrt{1/2}$$

$$4 \times 96500 \longrightarrow 22.4 \text{ dm}^3 \sqrt{1/2}$$

$$\frac{200 \times 58 \times 60 \times 22.4}{4 \times 96500 \text{ C}}$$

$$= 40.39 \text{ dm}^3 \sqrt{1/2}$$

b)  $0.13 - (-0.76)$   
 $= +0.53 \text{ V}$

6. (a)  $2F = 10 \Rightarrow 2F - 10 = 0; 2F = 10 \therefore F = +5$

$F = +5$  (penalize -5)

(b) Group V

7. Aluminium has a higher electrical conductivity than sodium. <sup>1/2</sup> Aluminium has three delocalized <sup>1/2</sup> electrons in its metallic structure while sodium has only one delocalized electron in its structure. <sup>1/2</sup>

8.  $Q = It \sqrt{1/2}$

$$= 3 \times 50 \times 60 \sqrt{1/2}$$

$$= 9000 \text{ C} \sqrt{1/2}$$

1 mole of Zn is liberated by a charge of 2 f.

i.e  $96500 \times 2 \text{ C} \longrightarrow 65 \text{ g of Zn}$

$9000 \text{ C} \longrightarrow ?$

$$= \frac{65 \times 9000}{96500 \times 2} \sqrt{1/2} = 12.124 \text{ g Zn} \sqrt{1/2}$$

9. a) Q is sulphur (IV) oxide  $SO_2(g)$ .  $\checkmark$

b)

- Impure copper is the anode while pure copper is cathode. During electrolysis impure copper is purified and pure copper deposited on the cathode as shown in the half electrode reaction below;

**CATHODE EQUATION:**

- The cathode is therefore removed and replaced after an interval.

10. a) i) the yield of  $NH_3$  would be lowered  $\checkmark$  any supply of heat makes  $NH_3$  to decompose to  $N_2$  and  $H_2$

ii) the yield of  $NH_3$  would be increased

b) a catalyst accelerates the rates of both forward and reverse reactions equally  $\checkmark$ . Equilibrium position is not affected by a catalyst  $\checkmark$

c)

11. a)  $T\checkmark$

$$c) E^\theta_{cell} = E - E$$

$$= 0.08 - (-2.38) \checkmark$$

$$= +3.18$$

12. Mass of due to C =  $\frac{12}{44} \times 4.2 = 1.145 \checkmark$

$$\text{Mass of due to H} = \frac{2}{18} \times 1.71 = 1.889\sqrt{1/2}$$

$$\text{Moles of C} = \frac{1.145}{12} = 0.095\sqrt{1/2}$$

$$\text{Moles of H} = \frac{0.1889}{1} = 0.1889\sqrt{1/2}$$

$$\text{Moles ratio } c: r \\ 0.095: 0.1889\sqrt{1/2} \\ 1: 2$$

$$E.F = CH_2\sqrt{1/2} \quad (\text{accept alternative method})$$

13. 96,500 coulombs      1 faraday

$$\frac{96,500}{144,750} \times 1 \text{ faraday} \longrightarrow ?$$

$$\frac{144,750}{96,000} \text{ faraday}\sqrt{1/2}$$

$$= 1.5 \text{ faradays}\sqrt{1/2}$$

Copper (II) ions = 2 faradays      (penalize 1/2 mk for missing/wrong units)

$$2 \text{ faradays yield} = 64\text{g of copper}$$

$$1.5 \text{ faradays yield} = ?$$

$$= \frac{1.5}{2} \times 64\text{g}\sqrt{1/2}$$

$$= 48\text{g of copper was obtained}\sqrt{1/2}$$

14. **Physical difference:-**  
 $Na_2O_2$  – yellow while  $Na_2O$  is white  
**Chemical difference:-**  
 $N_2O_2$  reacts with water to form  $NaOH$  and  $O_2$  while  $\checkmark 1$   
 $Na_2O$  reacts with water to form  $NaOH$  only  $\checkmark 1$

15. (a)  $Pb(NO_3)_2$   
 (b)  
 (c)  $Mg(s) / Mg^{2+}(aq) // Pb^{2+}(aq) / Pb(s)$

16. (a)  $MnO_4$  is reduced;  
 Oxidation number of Mn is reduced from +7 to +2  
 (b)  $5Fe^{2+}(g) \longrightarrow 5Fe^{3+}(aq) + 5e^-$ ;

17. i)  $2Cr(s) \longrightarrow 2Cr^{3+}(aq) + 6e^-$   
 $3Fe^{2+}(aq) + 6e^- \longrightarrow 3Fe(s)$   
 $2Cr(s) + 3Fe^{2+}(aq) \longrightarrow 2Cr^{3+}(aq) + 3Fe(s) \checkmark$
- ii)  $0.30 = -0.44 - E^{\phi}_R$   
 $E^{\phi}_R = -0.44 - 0.30$   
 $= -0.74V \checkmark$

18. (a) – Filtration of air/electrostatic precipitation/purification

- Passing through sodium hydroxide/potassium hydroxide to absorb Carbon (IV) oxide gas
- Cool to remove water vapour as ice
- Cool remaining air to liquid by repeated compression and expansion of liquid air
- Fractional distillation of liquid air- Nitrogen collected at  $-196^{\circ}\text{C}$

(b) (i) Nitrogen (II) Oxide

OR - Oxidation number of  $\text{N}_2$  in  $\text{NH}_3$  increases from -3 to 0. Oxidation number of reducing agent increases or oxidation number of Cu in CuO decreases from +2 to 0 hence is a reducing agent

(iii)  $\text{NH}_4\text{NO}_3 \rightarrow \text{N}_2\text{O} + 2\text{H}_2\text{O}$

(iv) Fertilizer/expose

(c) (i) G or G

19. a) i) G//  $\text{G}_{2(\text{g})}$  Not G-

It has the highest potential OR highest reduction potential  $\sqrt{1}$  mark

ii) G and N or  $\text{G}_{2(\text{g})}$  //  $\text{N}_{(\text{g})}$   $\sqrt{1}$  mark

iii)

20. a) (i) Cathode – steel

Anode – Carbon / graphite

(ii) To lower the melting  $P^+$  hence reducing cost of heating the salt.

(iii) To prevent the two products from recombining.

(iv) Cathode

Anode

(v) less dense than electrolyte/ has low density

b) (i) quantity =  $6.42 \times 10^6 = 3852$

(ii) 3852c province 2.74

$$2 \times 96000 \times \frac{(2 \times 96000) \times 2.74}{3852} = 136.58$$

21. .a) i)  $\text{H}^{+}(\text{aq}) + \text{e}^{-} \rightleftharpoons \frac{1}{2} \text{H}_2$

ii)  $E_{\text{cell}} = 0.76 + 0.54 = +1.3$  volts

iii) I.  $\text{Fe}^{3+}$

II. Zn

IV.  $\text{Fe}^{3+}$  ion

22. a) i) Chlorine Has a higher reduction potential  
ii)  $+1.36 - 2.36 = +3.72$

- b) i) P and S  
ii)  
iii)  $+1.50 - 0.44 + +1.94$

c)  $Q = 4 \times 6 \times 60 = 3840 \text{C}$   

$$\frac{1.17 \text{g}}{59 \text{g}} \times \frac{3840}{1.174} = 192981.261 \text{C}$$

If  $96,500 \text{c} \times \frac{192891.261}{1.174} = \frac{192981.261 \times 1}{96500}$

Charge of X = +2  
Formula  $\text{X}(\text{NO}_3)_2$

23. (a) B – Copper metal  
C – Chlorine gas  
D – Ammonia gas  
E – Zinc

- (c) – Water treatment  
– Manufacture of hydrochloric acid  
(d) Tetra mine copper (II) ions

24. (a) (i)  $E^{\theta} = 1.13 \text{V}$

(ii)  $\text{T}_2$  because it's standard electrode potential is zero. i.e. point of reference.

(iv)  $E.m.f = +1.23 - -0.76 = 1.99 \text{V}$

- (b) (i) x – Oxygen  
y – Hydrogen

(iii) Reduction takes place at electrode Y.  $H^+$  ions gain electrons to form hydrogen gas.

(iv) Platinum / graphite/ Nickel because it is inert.

(ii) The mixture consists of a soluble compound and an insoluble compound.

(iii) Evolution brown fumes of  $NO_2$  gas

(v)  $Pb^{2+}$  ion

(vi) Lead (ii) Carbonate

Zinc (II) Nitrate

26 A (i) Process by which an electrolyte is decomposed by passing an electric current through it.

(ii) Anode – left pt rod

Cathode – right pt rod

(iii) – Blue /pale green colour fades

- P solution becomes acidic

B (i) a. –  $D^{2+}$

b. –  $D^{2+}$

(ii) C

$$E_{cell} = E_{ordn} - E_{ordn} \\ = +0.34 - (-2.92) = +3.26V$$

(iii)  $B_{(s)} / B^{2+}_{(aq)} // D^{2+}_{(aq)} / D_{(s)}$ ;  $E = + 3.26V$

27  $Q = 40000 \times 60 \times 60 = 144000000c$

$$\text{Mass of Al} = \frac{144000000 \times 27}{3 \times 96500} \quad \checkmark 1 \\ = 13.43kg \quad \checkmark 1$$

28. a) Strip of copper metal dissolved forming blue solution.  $\sqrt{1/2}$

b) Copper displaces ions  $\sqrt{1/2}$  of Q from solution since copper is more electropositive  $\sqrt{1/2}$  than Q.

c) E.m.f of cell =  $(0.80 - 0.34)V \sqrt{1/2}$   
 $= 0.46V \sqrt{1/2}$

29 (a) (i) Carbon (IV) Oxide gas evolved was lost to the atmosphere

(ii) Concentration of reactants higher between O and R

Reaction rate faster

(iii) Grinding the marble chips

(iv) Calcium sulphate

(v) Plaster of Paris

(b) (i) Hydrogen ions discharged;

It takes less energy than calcium ions

(iii)  $Q = It = 4 \times 160 \times 60 \quad (\frac{1}{2} mk)$   
 $= 14400C$

$$2 \times 96500C = 2 \times 35.5(\frac{1}{2}mk)$$

$$14400C = \frac{14400 \times 2 \times 35.5}{2 \times 95600}$$

$$= 5.297g \quad (\frac{1}{2}mk)$$

30. a) the bulb light  $\sqrt{1/2}$   
 Hydrogen chloride gas ionized in water to give  $H^+$  and  $Cl^-(aq)$  that are responsible for conduction of electric current  $\sqrt{1}$   
 b)  $2H^+(aq) + 2e^- \longrightarrow H_2(g)$   $\sqrt{1}$

31.  $Q = it$   $IF = 69500C$   $\frac{2F}{96500} \times 206g \text{ of Pb}$   
 $= 40 \times (5 \times 60)$   $= \frac{1200 \times 1}{96500}$   $F = \frac{0.01243}{2F} \times 206$   
 $= 1200 C$   $= 0.01245 F$   $= 1.280g$

- II 1. Salt bridge  
 2. Complete the circuit  
 Balance the ions in each half cell

III

IV  $E_{cell} = E_{Red} - E_{Oxd}$   
 $= +1.16 - (-0.17) = +1.33V$

32. (a) (i) Zinc sulphate / Zinc chloride / Zinc nitrate solution  
 (ii) Copper  
 (iii)  $Zn(s) + Cu^{2+}(aq) \longrightarrow Zn^{2+}(aq) + Cu(s)$   
 (iv)  $E = 0.34 + 0.76 = 1.0V$

- (b) (i) Concentrated sodium chloride solution  
 (ii)  $2Cl^-(aq) \longrightarrow Cl_2(g) + 2e^-$   
 $Na^+(aq) + e^- \longrightarrow Na(l)$   
 (iii) Sodium amalgam is flown into water. It reacts forming sodium hydroxide solution

33. Quantity of electricity =  $(40,000 \times 60 \times 60)$  Coulombus  $\sqrt{1/2}$  mark  
 $3 \times 96,500$  Coulombus produce 27g of Al

$\therefore \frac{40,000 \times 60 \times 60 \times 27 \text{ Kg}}{3 \times 96,500 \times 1000}$   $\sqrt{1/2}$  mark  
 $= 13.43 \text{ Kg}$   $\sqrt{1/2}$  mark  
 Subtract  $1/2$  mark if units missing or wrong

[Total 12 marks]

34. i) Increased yield of  $NO$  /  $\sqrt{1}$  mark Equilibrium shifts to the right // favours the forward reaction // reduced pressure favours forward reaction // increased volume number of molecules  
 ii) It will not affect the yield // remains the same  
 Catalyst do not affect position of Equilibrium

35. a) R  
 b) T  
 c) i)  $T(g)$  and  $S(g)$

iv) From  $T(s)/T^{2+}$  half cell to  $S^{2+}/S(s)$  half cell through conducting wires

d) i)  $Q = It$   
 $= 2.5 \times (15 \times 60)$   
 $= 2250C$

ii)  $RAM = \frac{\text{mass} \times \text{valency} \times 96500}{Q}$   
 $= \frac{0.74 \times 2 \times 96500}{2250}$   
 $= \frac{142820}{2250}$   
 $= 63.476$

36. a) R

b) T

c) i)  $T(g)$  and  $S(g)$

iv) From  $T(s)/T^{2+}$  half cell to  $S^{2+}/S(s)$  half cell through conducting wires

d) i)  $Q = It$   
 $= 2.5 \times (15 \times 60)$   
 $= 2250C$

ii)  $RAM = \frac{\text{mass} \times \text{valency} \times 96500}{Q}$   
 $= \frac{0.74 \times 2 \times 96500}{220}$   
 $= \frac{142820}{2250}$   
 $= 63.476$

37.  $NH_4^+$ , proton donor ✓

38. a) - Bubbles of colourless gas at the anode ✓ $\frac{1}{2}$

- Brown deposits at the cathode ✓ $\frac{1}{2}$

- Blue color of the solution fades

Any 2  $\frac{1}{2}$  mark each

b) The pH decreases

Removal of  $OH^-$  ions leaves an excess of  $H^+$  hence the solution becomes more acidic ✓

39. a) Anode. Copper anode dissolves

b)  $Q = 0.5 \times 60 \times 64.3 = 1929C$

$0.64g$  of Cu  $\rightarrow$  1929 C

$\therefore 63.5$  of Cu

$\frac{63.5 \times 1929}{2} \sqrt{\frac{1}{2}}$

$0.64$

$= 191393 C \sqrt{\frac{1}{2}}$

40. The grey-black solid changes to purple gas iodine sublimes at low temperature due to weak Van der Waals forces
41. (a) The mass of substance liberated during electrolysis is directly proportional to the quantity of electricity passed  
 (b) Quantity of electricity =  $2 \times 2 \times 36000 = 14400c$  (½mk)  
 Volume of gas evolved =  $\frac{14400 \times 22.4}{2 \times 96500} = 1.671dm^3$  (1 ½ mk)
42. (a)  $OH^-$  ✓1 (1 mk)
43. (i) ZnS- No mark if the letters are joined  
 (ii)  $SO_2$  produced as a by-product is used in contact process to obtain  $H_2SO_4$ . This acid is used in making fertilizers e.g. ammonium sulphate
44. (i) CaO is basic and  $P_4O_{10}$  is acidic ✓1  
 (ii) Let the ON of P be x  
 $4x + (-2 \times 10) = 0$   
 $4x = +20$   
 $x = +5$  ✓ ½  
 (iii) Used as a fertilizer ✓1
45. Platinum electrode is used,  $H_2$  is bubbled over the Pt electrode immersed in 1M  $H^+$  i.e. 1M HCl. The electrode is coated with finely-divided platinum catalyst

(b) electrochemical cell

46.  $+0.76 + 0.34 = 1.0$  Volts
47. (a) - Red- Phosphorous  
 - White - Phosphorous  
 (b) Phosphorous is insoluble in water because its non-polar while water is polar.  
 It cannot be stored in oil because oil is non-polar it will dissolve the phosphorous.
48. (a)  $2X(s) + 3W(aq) \rightarrow 2X^{3+}(aq) + 3W(s)$   
 (b)  $E^\theta(X/X^{3+}(aq)) + -0.44 = 0.3V$   
 $E^\theta(X(s)/X^{3+}(aq)) = +0.74V$  ✓  
 $E^\theta(X^{3+}(aq)/X(s)) = -0.74V$  ✓  
 ✓ ½

Salt bridge

49. Electrode -  $E_1$  is the anode  
 Dilute electrolyte -  $OH^-$  ions are discharged.

Oxygen gas is produced.

Discharge of hydroxyl ion increases the concentration of sodium chloride.

Chloride,  $\text{Cl}^-$  are then discharged.

Chloride,  $\text{Cl}^-$ , are then discharged

Chloride gas is produced

50. a)  $\text{ClO}_3^- (=) \text{Cl} + 3(-2) = -1 (=) \text{Cl} - 6 = -1, \text{Cl} = +5$

b)  $\text{NO}_2 (=) \text{N} + 2(-2) = -1 (=) \text{N} - 4 = -1 (=) = \text{N} + 3$

51.

Half Cell	$E^\theta/V$	$E^\theta/V$ using iron ref - electrode
$\text{Al}_{(s)} / \text{Al}^{3+}_{(aq)}$	- 1.66	- 1.22
$\text{Zn}_{(s)} / \text{Zn}^{2+}_{(aq)}$	- 0.76	+0.32
$\text{Fe}_{(s)} / \text{Fe}^{2+}_{(aq)}$	- 0.44	0.00
$\text{Ni}_{(s)} / \text{Ni}^{2+}_{(aq)}$	- 0.25	+ 0.19

52.  $\theta = 1.5 \times 60 \times 15 = 1350$

$$3F = 3 \times 96500 = 289500C$$

$$289500C \text{ deposit} = 52g \text{ of } \text{J}_{(s)}$$

$$= 1350 C \text{ deposit} = 1350 \times \frac{52}{289500} = 0.24225g$$

53. Tin (Sn) its oxidation potential is +0.144V. It is the least likely to combine/ react with elements of weather

## 5. Metals

1. a) chlorine gas would react with steel anode

b) Hood and steel gauze prevent chlorine sodium, from anode and cathode from mixing and reacting.

- Sodium metal is less dense, floats on molten brine where it is siphoned out.

c) -To Whom It May Concern: melt the ore, rock salt

- For electrolysis of the molten ore

2. a)  $\text{SO}_2(g)$  is produced as a by-product, this mixes with rain water producing acid rain which may corrode buildings and affect plants  $\checkmark \frac{1}{2}$

$\text{SO}_2(g)$  is poisonous when inhaled  $\checkmark \frac{1}{2}$

b) -  $\text{H}_2\text{SO}_4$  manufacture – to make use of  $\text{SO}_2(g)$

- Manufacture of dry cells – make use of zinc

- Production of iron sheets which are galvanized using zinc (Any one with an explanation)

c) Low density, does not corrode easily, ductile, malleable (Any 2 each  $\frac{1}{2}$  mark)

3. Aluminium is lighter/low density. (any)

It is a good conductor of electricity

4. Stage 1 – oxidation; Coke is oxidized to CO  $\checkmark \frac{1}{2}$

Stage 2 – Reduction: zinc is reduced to Zinc metal  $\checkmark \frac{1}{2}$

**Stage 3;- Recycling stage; CO<sub>2</sub> is reduced to regenerate CO**

5. a) Q is sulphur (IV) oxide SO<sub>2</sub>(g). ✓1

b)

- Impure copper is the while pure copper is cathode. During electrolysis impure copper is purified and pure copper deposited on the cathode as shown in the half electrode reaction below;

**CATHODE EQUATION:**

- The cathode is therefore removed and replaced after an interval.

6. (i) I-I-I-tetrachloromethane /Tetrachloromethane  
(ii) Chloric (I) acid

7. Oxide of W has simple molecular structure while that of Z has giant ionic structure

8. (a) Froth floatation. ✓1  
(b)  $\text{PbCO}_3(\text{s}) \longrightarrow \text{PbO}(\text{s}) + \text{CO}_2(\text{g})$  (1 mk) (1 mk)  
(c) Making of pipes/lead acid accumulators. ✓1 (any one)

9. a) bauxite ✓  
b) Copper pyrites ✓

} 3

10. i)  
ii) I It's uneconomic// Expensive// a lot of energy is required to produce this high temperature  
II Addition of cryolite ✓½ mark  
iii) The melting point is below 800 C ✓½ mark

11. (a) (i) Bauxite  
(ii) Iron (III) Oxide  
Silica (any one)  
(b)(i) On the diagram  
(ii) It is expensive /a lot of energy will be used ✓ 1  
(iii) The ore is dissolved in cryolite (NaAlF<sub>6</sub>) ✓ 1

12. (i) Bauxite – Al<sub>2</sub>O<sub>3</sub>. H<sub>2</sub>O  
(ii) Iron II oxide

- Silica

(iii) Being ionic, it is only an electrolyte in its molten state. Heating helps to melt it.

(iv) (a) – The two rods represent the anode.

- Cathode is the inner lining of the wall.

(b) As an impurity, lowering the melting point of aluminium oxide.

(c) Anode  $2O_2(l) \rightarrow O_2(g) + 4e^-$

Cathode  $Al^{3+} + 3e^- \rightarrow Al(l)$

d) – manufacture of household utensils

- making cables for electricity transmission

- making foils used as wrappers

- extraction of some metals e.g. manganese

- Making aeroplane parts

Describe how you would establish the presence of copper in the ore

13. (a)  $CuFeS_2$

(b) Froth floatation

(c)  $2CuFeS_{(s)} + 4O_2(g) \rightarrow Cu_2S + 2FeO_{(s)} + 3SO_2(g)$

(d) Silica is added which reacts with iron (II) Oxide to form iron (II) silicate which forms part of slag or  $SiO_2$  is added

(e) Anode  $Cu_{(s)} \rightarrow Cu^{2+}_{(aq)} + 2e^-$

Cathode  $Cu^{2+}_{(aq)} + 2e^- \rightarrow Cu_{(s)}$

(g) – Add  $HNO_3$  to the ore

- Filter and place small portion of the filtrate into a test tube

Add  $NH_4OH$  until in excess – deep blue solution confirms the presence of  $Cu^{2+}$  ions

14. (a) (i) Gas Q- Carbon (II) Oxide

(ii) Liquid R- dilute sulphuric acid

(iii) Residue S – excess Zinc metal

(b) Zinc blende

(c) (i) To increase percentage of Zinc in the ore

(ii) The ore is crushed, mixed with water and oil and then air is blown into the mixture.

(d) (i)  $2ZnS_{(s)} + 3O_2(g) \rightarrow 2ZnO_{(s)} + 2SO_2(g)$

(ii)  $Zn_{(s)} + H_2SO_4(aq) \rightarrow ZnSO_4(aq) + H_2(g)$

(e) (i) - Lead (II) sulphate //Pbs

- Silica //silicon (IV) oxide//  $SiO_2$

(ii) Lead (II) sulphide

$2PbS_{(s)} + 3O_2(g) \rightarrow 2PbO_{(s)} + 2SO_2(g)$

(f) (i)  $45 \times 250000$

$$100 \\ = 112,500\text{g of ZnS}$$

(ii)  $R_{\text{mm}}$  of ZnS = (65.4 + 32) – 97.4g

From the equation

The mole ratio of Zn of ZnS: SO<sub>2</sub> = 1:1

97.4g of ZnS = 24dm<sup>3</sup> of SO<sub>2</sub> at r.t.p

$$112,500\text{g of ZnS} = \frac{112,500}{97.4} \times 24$$

$$= 27,720.73920\text{dm}^3 \text{ of SO}_2$$

15. a) i) Zinc Blende (Penalize for formula only)  
ii) Lead II Sulphide

b) It is concentrated by froth floatation where the ore is crushed or ground, a detergent added and the mixture agitated. Zinc sulphide floats and is collected

d) Zinc oxide is reduced by both carbon and carbon (ii) Oxide to zinc vapour. Lead (ii) Oxide is also reduced by both carbon and carbon (ii) Oxide to lead liquid

Accept equations

e) W = Sulphur (vi) Oxide // SO<sub>3(g)</sub>

M = Conc. Sulphuric (Vi) acid // H<sub>2</sub>SO<sub>4(L)</sub>

g) The process is highly exothermic and heat produced boils the acid leading to acid mist which cannot be condensed easily because it is highly unstable

h) The sulphur (iv) Oxide dissolves in water to form acid rain which corrodes buildings and affects aquatic life

16. (a) Purification and concentration.

(b) (i) Bauxite

(ii) Iron (III) Oxide /Silicon (IV) Oxide

(c) On diagram

(d) Lowers the melting point of the ore from 2015<sup>o</sup>c – 900<sup>o</sup>c.

17. )  $Q = It = 3 \times 10 \times 60 = 1800$

$$3F = 3 \times 96500c = 27g$$

$$\therefore 1800c = \frac{1800 \times 27}{3 \times 96500} \\ = \underline{0.16788g}$$

18. a) Zinc blende

b) i)

- I- carbon IV oxide
- II – Dil sulphuric acid
- III – unreacted zinc

ii) To reduce zinc oxide to zinc metal

iii) Silica

iv)

vi)  $45/100 \times 250 = 112.5 \times 1000 = 112500g$   
 $= 112.5 Kg$

vii) – Used to make brass

- Used to make electrodes in dry cells
- Galvanize iron sheets

19. a) i) - Effervescence, a colorless gas is produced  
 - Grey solid dissolves, a colorless solution is formed  
 ii) Nitric acid is a strong oxidizing agent. It will oxidize the hydrogen gas formed to form water instead

II Moles of Zn =  $\frac{0.5g}{65.0} = 0.007692$

Moles of HCL =  $0.007692 \times 2 = 0.015384$

3 moles of HCL has  $1000 cm^3$

0.015384 moles has  $\frac{0.015384 \times 1000cm^3}{3} = 5.182cm^3$

20. (a) P – Chlorine ( $\frac{1}{2}$ )  
 Q – Sodium ( $\frac{1}{2}$ )  
 (b) Prevent reaction between sodium and chlorine  
 (c)  $Na^+(l) + e^- \longrightarrow Na(l)$

21. (a) B.E ✓  $\frac{1}{2}$   
 (b)  $Pb^{2+}(l) + 2e^- \longrightarrow Pb(s)$  S.S ✓  $\frac{1}{2}$   
 (c)

22. a) zinc blende ✓  $\frac{1}{2}$   
 Calcium ✓  $\frac{1}{2}$   
 b)  $2ZnS(s) + SO_2(g) \longrightarrow 2ZnO(s) + 2SO_2(g)$  ✓1 (penalize  $\frac{1}{2}$  if states are missing)  
 $ZnCO_3(s) \longrightarrow ZnO(s) + CO_2(g)$  ✓1 (penalize  $\frac{1}{2}$  if states are missing)

23. a) Iron III hydroxide

- b) Concentrated sodium hydroxide is added at 4 atm pressure to the Bauxite at 160C  
 $Al_2O_3$  dissolves in the sodium hydroxide leaving the iron III oxide as a solid
24. a) i) The oxygen produced at the anode reacts with hot carbon to form carbon (iv) oxide hence corrodes it therefore needs replacement  
 ii) Graphite is inert and a poor conductor of heat hence helps to conserve heat
- b) Aluminum has more number of valency electrons which are delocalized

## Organic chemistry II (alkanoic acids and alkanols)

1. (i) Ethylbutanoate  
 (ii)  $CH_3CH_2CH_2$  C - O - CH<sub>2</sub> - CH<sub>3</sub>  
 (iii) Esters  
 ||
2. a) -CH- CH- CH<sub>2</sub> - CH- CH<sub>2</sub>- CH - CH<sub>2</sub> - CH  
 b) Polyphenyl/ ethane
3. Plastics may contain chlorine or fluorine compounds apart from hydrogen and carbon when burnt, fluorine and chlorine compounds are released into the air destroying Ozone layer
4.  $(NH_4)_2 CO_3(s) \longrightarrow 2NH_3(g) + CO_2(g) + H_2O(l)$
5. The first amount of soap precipitates  $Ca^{2+}_{(aq)}$  and  $Mg^{2+}_{(aq)}$  ions and soften water.  
 Then additional soap dissolves oil from the fabric.

b) 0.00005mol.  $P = 0.515$  g of monomer.  
 $= 1.0$  mole of poly mer  $= \frac{1 \times 0.515}{0.0005} = 10300$  g

$$\begin{aligned}
 RFM (C_4H_9NO_2)_n &= 48 + 9 + 32 = 103 \\
 &= (C_4H_9NO_2) = 10300 \\
 103n &= 10300 \\
 \therefore n &= 100 \text{ molecules}
 \end{aligned}$$

7. Agent A – magnesium salt formed is soluble hence doesn't form scum
8. (a) Styrene/Phenylethene

- (b) Addition polymerization
- (c) – can be made into different shapes easily
- are cheaper
  - are not corroded by acids, alkalis or air
  - are stronger and long lasting
  - are water-proof
- } Any 1 correct
9. – Add water to the mixture and shake where ethanol dissolves in water while pentane is immiscible.

\*MAT

- Transfer the mixture in a separating funnel and allow it to settle when pentane floats on top of water-ethanol mixture.

\*MAT

- Turn on the tap to collect water-ethanol mixture while pentane remains in the separating funnel.

- Separate ethanol from water by fractional distillation based on the differences in boiling points.

10. (a) Is 100% ethanol/is pure ethanol without water in it  
 (b) 30°C and yeast

✓ 1

11. (ii)  $R = \frac{\Delta y}{\Delta t}$   
 $= \frac{43 - 40.5}{180 - 150}$   
 $= \frac{25}{30}$   
 $= 0.0833 \text{ cm}^3/\text{s}$

(ii) 57 seconds

(b) (i) To oxidize H<sub>2</sub> produced to water

(ii) Z

(iii)  $Q = 1t$

$$= 0.1 \times 30 \times 60$$

$$= 180\text{C}$$

$$96500\text{c} = 1\text{F}$$

$$180\text{cc} = \frac{180 \times 1}{96500}$$

$$= 0.001865\text{F}$$

$$2\text{F} = 65\text{g}$$

$$0.001865\text{F} = \frac{0.001865 \times 65}{2}$$

$$= 0.0606\text{g of Zn was consumed}$$

12. (a) (i) Ethylethanoate.  
 (ii) 2-bromobut-1-ene

(b) (i) P – CH<sub>3</sub>COOCH<sub>2</sub>CH<sub>3</sub>  
 S – CH<sub>3</sub>CHONa

(ii) I. Step I - Type – dehydration.

Reagent – Concentrated sulphur acid.

II. Step II- Type – Oxidation

Reagent – acidified potassium manganate VII/ Potassium dichromate (VI)

III. Step III- Type – Hydrogenation

Reagent – Hydrogen

(iii) R – Soda lime

Teterechloromethane

(v) I – U – Polythene/Polyethene

$$II - 28n = 42000$$

$$n = \frac{42000}{28} = 1500$$

13. (c) – It is unsaturated.
- a) - The length of the chain  
 - Intermolecular forces  
 - Cross linking of the molecules (Any two correct = 2 marks)

b) Sodium propoxide

- c) i) I – T is ethane  
 II – K is polypropene  
 ii) has a sweet smell  
 iii) Neutralization  
 iv) - Used to make ropes √1 mark  
 - Used to make crates of bottles  
 - Used as surface for all weather football and hockey pitches (Any correct use)
- v)  $CH_3CH_2CH_3 + SO_2 \xrightarrow{\quad\quad\quad} 3CO_2 + 4H_2O$   
 (N.B ignore state symbols)

vi) React a small sample of each of the two substances with sodium carbonate separately. Bubbles// efferescence are observed with  $CH_3CH_2COOH$  and no reaction with  $CH_3CH_2CH_2OH$

vii) RMM of monomer = 42 √½

$$42n = 12600$$

$$N = \frac{12600}{42} = 300 \sqrt{1/2}$$

14. a) i) Propene √1
- ii)  $2CH_3CH_2COOH + Na_2CO_3 \sqrt{1/2} \longrightarrow 2CH_3CH_2COONa + CO_2 + H_2O$

b) Making packing materials √1

c)  $KMnO_4 \sqrt{1/2}$  /  $K_2CrO_7$

$$42n \sqrt{\quad} = 4200$$

$$n = 4200/42$$

$$= 100 \sqrt{\quad}$$

e) Esterification √1

f) Conversion of oils to fats. √1

g) Propane burns with a clear flame √1 while propyne burns with a sooty flame √1 because propyne has a higher √1 C : H ration than propane.

$$\begin{aligned} \text{Vol of } O_2 \text{ required} &= 3 \times 1000 \text{ cm}^3 = 3000 \text{ cm}^3 \sqrt{1/2} \\ \text{Vol of air required} &= \frac{100 \times 3000 \text{ cm}^3}{20} \\ &= 15,000 \text{ cm}^3 \sqrt{1/2} \end{aligned}$$

15. (a) (i) Q -  $CH_3CH_2COOH$  (accept name (propanoic acid))  
 R -  $CH_3CH_2COOH$  (Propanoic acid)  
 P - Hydrogen

- (ii) Step I Esterification ✓ 1  
 Step 4 - Oxidation ✓ 1

- (iv) Condition -  $180 - 250^\circ$  ✓ 1/2  
 reagent - Conc.  $H_2SO_4$  ✓ 1/2

16. (a) (i) M: Ethan - 1, 2- diol  
 L: Ethanoic acid  
 (ii) Polymerisation  
 Hydrogenation  
 (iii) Concentrated sulphuric acid  
 Ethanoic acid

17. a) i) Butan - 1 - ol // 1- Butanol // n-Butanol  
 ii) Propanoic acid  
 iii) Ethylethanoate

18. i) Step I: Hydrogen  
 Step II: Hydrogen chloride gas // HCL  
 Step III: Sodium hydroxide / NaOH / Sodalime  
 ii)  $2C_2H_2(g) + 5O_2(g) \rightarrow 4CO_2(g) + 2H_2O(g)$   
 iii) Environmental pollutant  
 It is not biodegradable / Not decomposed by bacterial

19. i)
- |           |           |           |                       |
|-----------|-----------|-----------|-----------------------|
| <i>Fe</i> | <i>S</i>  | <i>O</i>  | <i>H<sub>2</sub>O</i> |
| 20.2/56   | 11.5/32   | 23.0/16   | 45.3/18               |
| 0.36/0.36 | 0.36/0.36 | 1.44/0.36 | 2.52/0.36             |
| 1         | 1         | 4         | 7                     |
- Empirical formula:  $FeSO_4 + H_2O$

$$\begin{aligned}
 \text{ii) } 6.95\text{g} &= \frac{6.95}{278} = 0.025 \\
 \therefore 0.05 \text{ moles in } 250\text{cm}^3 &= 0.025 \times \frac{1000}{250} = 0.1 \\
 \text{Concentration} &= \frac{6.95}{278} \times \frac{1000}{250} = 0.1
 \end{aligned}$$

20. i) Step I: Hydrogen

Step II: Hydrogen chloride gas// HCL

Step III: Sodium hydroxide/ NaOH/ Sodalime

iii) Environmental pollutant

It is not biodegradable/ Not decomposed by bacterial

21. i) Butan - 2 - Ol ✓½

ii) 4 - methylhex - 2 - ene ✓

iii) Propyl ethanoate ✓

22. a) Soap less detergent ✓

b) Non- biodegradable resulting in pollution ✓

23. a)

b) Addition

24. (a) A - Sodium ethanoate

B - Acidified  $\text{KMnO}_4$  or  $\text{K}_2\text{Cr}_2\text{O}_7$

(b) Oxidation

25. (a)  $\text{NH}_3(\text{g}) + \text{HNO}_3(\text{aq}) \longrightarrow \text{NH}_4\text{NO}_3(\text{s})$

(b) 17kg ammonia  $\equiv$  80kg  $\text{NH}_4\text{NO}_3$  (½)

$$\therefore 5.3\text{kg} \equiv \frac{80 \times 5.3}{17} = 24.94\text{Kg} \quad (1\frac{1}{2} \text{ kg})$$

26. (a) A reaction between an ethanol and alkanoic acid to form ester;

(ii) Ethylpentanoate . ✓1

28. i) ethylethanoate ✓½

ii) step 2: oxidation  $\checkmark^{1/2}$

step 4: esterification  $\checkmark^{1/2}$

iii) sodium hydroxide, or NaOH  $\checkmark^1$

29. a) Hydrogen.  $\checkmark^1$

b) (i) A No effervescence takes place.  $\checkmark^{1/2}$

(ii) B There is effervescence  $\checkmark^{1/2}$  and the gas produced turns lime water into white precipitate.  $\checkmark^{1/2}$

30. a) Y  $\checkmark^1$

b) Z and W  $\checkmark^1$  have same atomic number but different mass number.  $\checkmark^1$

31. (a) Insulators

(b) Are non-conductor since they lack delocalised electrons

Soapless detergent

(b) Non-biodegradable

33. (a) No. of half-lives (n) =  $\frac{120}{20} = 6$

$$Y \times \left(\frac{1}{2}\right)^6 = 3.5 \times 20 \checkmark^{1/2}$$

$$Y = 3.5 \times 2^6 \checkmark^{1/2}$$

$$Y = 224g \checkmark^{1/2}$$

(all steps for equation)

(b) – To study the rate of absorption of fertilizer by plants using radioactive phosphorus  
– Tracing chemical and physiological processes such as photosynthesis  
– Sterilizing equipment (Iny one)

34. (i) Polypropene

(ii)  $(H_2C=CH-CH_3)_n = 4956$

$(12 \times 3) + (6 \times 1) = 36 + 6 = 42$  (molecular mass of 1 unit)

no. of units =  $42n = 4956$

$$42n = 4956$$

$$\frac{42n}{42} = \frac{4956}{42}$$

$$n = 118 \checkmark^1$$

35. i)  $RCOONa^+$  Soapy detergent

R  $CH_2OSO_3Na^+$  soap less detergent

ii)  $RCH_2OSO_3Na^+$  does not form scum. Its calcium and magnesium salts are soluble

iii) Chlorine bleaches by oxidation

$SO_2$  bleaches by reduction

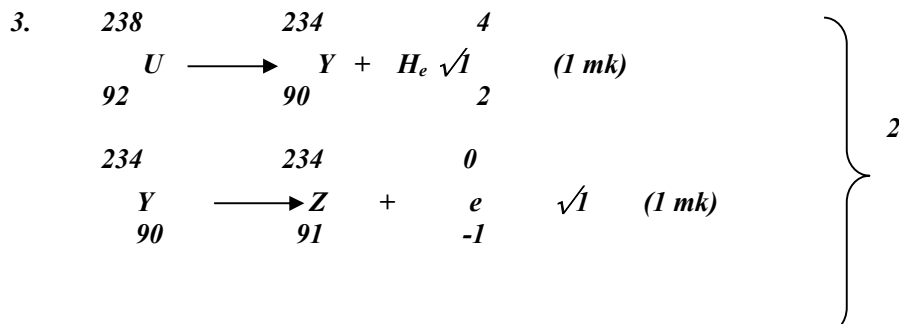

36. (a) Polyphenylethene

## Radioactivity

1.  $u = 234 \checkmark$                        $V = 91 \checkmark$

2. (a) Nuclear fusion is a process whereby smaller nuclei combine to form a larger one at high temperatures;  
Nuclear fission is whereby a large nuclide splits to form smaller one when hit by a neutron

4. (a) Is an atom or atomic nucleus characterized by its atomic number and mass number

(b)  $\frac{14}{2} = 7 \quad \checkmark$  from the graph

$\therefore$  half-life is 10 days  $\checkmark$

(c) Destroys physical properties of metals e.g. lower tensile strength  $\checkmark$

5. a) nuclear reactions involve the nucleus of an atom but chemical reactions involved valence electrons
- Nuclear reactions are independent of external factors but chemical reactions depend on external factors
  - In nuclear reactions new elements are formed but no new elements are formed in chemical reactions (any one of them)

b) i) step I-Alpha  $\checkmark$

II- Beta  $\checkmark$

ii)  $Z = 234 \checkmark$

$A = 92 \checkmark$

1<sup>st</sup>  $t^{1/2}$

2<sup>nd</sup>  $t^{1/2}$

II. 100%  $\longrightarrow$  50%  $\longrightarrow$  25%

$2t^{1/2} = 48 \text{ hours}$

$t^{1/2} = ?$

$$t^{1/2} = \frac{48}{2} = 24 \text{ hours}$$

6. a) Hydrogen.  $\sqrt{1}$   
 b) (i) A No effervescence takes place.  $\sqrt{1/2}$   
 (ii) B There is effervescence  $\sqrt{1/2}$  and the gas produced turns lime water into white precipitate.  $\sqrt{1/2}$
7. (a) 8 (protons number same as atomic number)  
 (b)  $27 - 13 = 14$
8. (a) No. of half-lives (n) =  $\frac{120}{20} = 6$

$$Y \times \left(\frac{1}{2}\right)^6 = 3.5 \quad \checkmark \frac{1}{2}$$

$$Y = 3.5 \times 2^6 \quad \checkmark \frac{1}{2}$$

$$Y = 224 \text{ g} \quad \checkmark \frac{1}{2}$$

(all steps for equation)

- (b) – To study the rate of absorption of fertilizer by plants using radioactive phosphorus  
 – Tracing chemical and physiological processes such as photosynthesis  
 – Sterilizing equipment (Iny one)
9. a)  $14 \frac{Y}{6} \quad 14 \frac{Z}{7} + 0 \quad -1$   
 b) carbon dating
10. – Gamma rays are used to sterilize surgical equipment  
 – Detection and treatment of goiter
11. i) U, V, Y, Z All the 4 or nay 3 exclusively correct penalize  $\frac{1}{2}$  mk if wrong answer  
 ii) YZ is/are included any 2 correct  $\frac{1}{2}$  mk

12. No. of  $t \frac{1}{2} = \frac{90}{15} = 6$   
 Remaining Fraction =  $\left(\frac{1}{2}\right)^6 = \frac{1}{64}$   
 Mass left =  $\frac{1}{64} \times 2 = 0.03125 \text{ g}$

13. a) -1 C  
 b)  $100 - 50 - 25 = 12.5$   
 $3t \frac{1}{2} = 15.6$   
 $T \frac{1}{2} = \frac{15.6}{3}$   
 $= 5.2 \text{ years}$

### KAKAMEGA CENTRAL DISTRICT

**QUESTION 1** .

**Table 1.**

<i>Titre number</i>	<i>I</i>	<i>II</i>	<i>III</i>
<i>Final burette reading (cm<sup>3</sup>)</i>	22.0	44.1	26.9
<i>Initial burette reading (cm<sup>3</sup>)</i>	0.0		
<i>Vol. of soln. K used cm<sup>3</sup></i>	22.0	22.1	21.9

*CT = 1*

*OP = 1*

*AC = 1*

*PA = 1*

*FA = 1*

5

$$(a) \frac{22.0 + 22.1 + 21.9}{3} = 22.0 \text{ cm}^3$$

**Marking points**

*Complete table (CT) .....*

*The table should be completed.*

*Penalize the following errors if any occurs.*

- *Arithmetic error in subtraction.*
- *Values recorded beyond 50cm<sup>3</sup>*
- *Inversion of table*
- *Penalize ½ mk only on any one of these errors.*

**Decimal point (d.p) 1mk**

*All values to be recorded to 1d.p or*

*All values to be recorded to 2dp second decimal value being 0 or 5 only*

*Award 0-mark if whole numbers used or 2dp are used.*

**Accuracy mark (AC)...**

*Consider any one candidates' titre if within ± 0.10cm<sup>3</sup> of school value award 1mk.*

*If it is ± 0.11 to 0.20 award ½ mk. If beyond 0.20 award 1mk*

**Averaging principle (.A)....**

*Three titres to be averaged if within ±0.1cm<sup>3</sup> to one another.*

*Two titres can only be arranged if they are consistent.*

*N/B- If a student averages two titres when three are consistent award 0mk.*

**Final answer (F. A).....**

*If averaged titre is within 0.0 to 0.10cm<sup>3</sup> of S.V award 1mk*

*0.11 to 0.2cm<sup>3</sup> of s.v award ½ mk*

*If beyond 0.20cm<sup>3</sup> award 0mk.*

**Summary**

*Complete table (CT) = 1mk*

*Correct use of decimals(dp) = 1mk*

*Accuracy (AC) = 1mk*

*Averaging (PA) = 1mk*

*Final answer (FA) = 1mk*

*5mks*

*N/B – school vale (SV) teacher to perform practical to obtain school value.*

**Calculations**

*(b) 100cm<sup>3</sup> has 0.02moles*

$$22.0 \text{ cm}^3 \text{ has- } \frac{22 \times 0.022}{1000} \quad 1 \frac{1}{2} \text{ mk}$$

$$= 0.00044 \text{ moles} \quad \frac{1}{2} \text{ mk}$$

(c) (i) mole ratio  $\text{MnO}_4 : \text{Fe}^{2+} = 1:5$

$$\frac{Tr = \frac{1}{2}}{4}$$

Decimal point (dp)..... ( $\frac{1}{2} \text{ mk}$ )

All values of time (t to be whole number or to 1d.p or 2d.p consistently otherwise award 0mk.

Accuracy (AC).....  $\frac{1}{2} \text{ mk}$

Consider time for experiment only if 3 sec of school value (SV) award  $\frac{1}{2} \text{ mk}$  if beyond 0mk.

Trend (Tr)..... ½ mk  
 Values of t to be increasing if otherwise 0mk

Summary

Complete table	CT	= 2 ½
Decimal point	DP	= ½
Accuracy	Ac	= ½
Trend	Tr	= ½
		<u>4mk</u>

(a) Graph

Labeled axes with correct units	= ½ mk
Scale to cover ½ or more of space	= ½
Plotting done correctly	= 1
Straight line through 3 point	= 1
	<u>3mks</u>

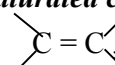

(b) Straight line graph

Increase in concentration; there are more collisions leading to increase in rate of reaction

(c) To read correct value of 1/t from graph

T=1/t ½ mk = ans. ½ mk

Question 3

	Observation	Inference
(a) (i)	Dissolves colourless solution ½ mk	Coloured ions absent, polar substance ½ mk
(ii)	White ppt forms ½ mk soluble in excess ½ mk	Al <sup>3+</sup> , Pb <sup>2+</sup> , Zn <sup>2+</sup> present 3 ions 1mk 2 ions ½ mk 1 ion 0mk
(iii)	No white forms ½ mk Insoluble in excess ½ mk	Al <sup>3+</sup> or Pb <sup>2+</sup> present ½ each if Zn <sup>2+</sup> absent ½ mk
(iv)	No white ppt forms 1mk	Pb <sup>2+</sup> absent pr Al <sup>3+</sup> present 1 for any
(v)	White ppt forms 1mk	Cl <sup>-</sup> , SO <sup>2-</sup> <sub>4</sub> , SO <sup>2-</sup> <sub>3</sub> , SO <sup>2-</sup> <sub>3</sub> 4 ions 1mk 3 ions ½ mk 2 or 1 ion 0mk
(b) (i)	Melts, ½ mk Burns with non-smoky flame ½ mk	Saturated compounds ½ mk  or $\cdot\text{C} \equiv \text{C}\cdot$ Absent ½ mk
(ii)	Dissolves colour solution ½ mk	Polar organic compound ½ mk
(iii)	Solution has pH = 4 or 5 ½ mk	Weak acid -COOH present ½ mk
(iv)	Effervescence evolved ½ mk	-COOH present ½ mk
(v)	Decolourization occurs ½ mk	-COOH present ½ mk

N/B – Penalize for any contradictory ion ½ mk

2.

(a) Working out average

Penalties

Wrong arithmetic penalize (- ½ mk)

Correct answer but no working shown (- ½ mk)

- Value rounded up to 1 d.p (- ½ mk)

- Accept rounding off of answer to 2d.p

(b) moles Na<sub>2</sub>CO<sub>3</sub> = 0.05 x 25 = 0.00125 (½ mk)

$$\begin{aligned}
 &1000 \\
 \text{Moles HX} &= 2 \times 0.00125 = 0.0025 \quad (\frac{1}{2} \text{ mk}) \\
 \text{Molarity of HX} &= 0.0025 \times 1000 \quad (\frac{1}{2}) \\
 \text{Titre volume (Av.)} & \\
 &= \dots\dots\dots
 \end{aligned}$$

**Table 2 and averaging**

**(c) To be marked as in table 1 above 5mks**

**(d) (i) moles B = molarity of HX above x titre volume B**

**Moles C = moles B**

$$\text{Molarity of C} = \frac{\text{moles C} \times 1000}{25}$$

**(ii) Molarity in d(i) x 56g**

**(c) Grams KOH in 250ml solution**

**= ans. In d(ii) ÷ 4.....x**

**Mass KCl in 2.1g = 2.1 – ans. In d(ii) 4**

$$\% \text{ KCl} = \frac{2.1 - x}{2.1} \times 100$$

**2. (a) TABLE**

**Constant temperature upto 1 ½ min  
Then temperature rises slowly to a maximum.  
Then remains constant  
Lastly it drops slightly**

**(b) (i) Graph – scale 1mk (½ for each axis)**

**Plot 1mk (for all correct)**

**For more than ½**

**Correct (½ mk)**

**Curve 1mk**

**(ii) Read from graph**

$$\text{(c) Quantity of heat} = \frac{40 \times 4.2 \times \text{temperature change}}{1000}$$

$$= \dots \text{KJ}$$

**(d) (i)  $\text{Cu}^{2+} + \text{Zn}_{(s)} \rightarrow \text{Zn}^{2+}_{(aq)} + \text{Cu}_{(s)}$**

$$\text{(ii) Moles } \text{Cu}^{2+} = \frac{0.2 \times 40}{1000} = 0.8$$

$$= 0.008 \text{ moles}$$

**(iii)  $\frac{\text{Ans. in c} \times 1}{0.008}$**

**(iv) Some heat is lost into the environment by conduction and convection**

**Question 3.**

**I**

**(a)- Jelly solid changes to white solid (½)**

**Gas evolved that puts off burning splint (½)**

**P is deliquescent (½)**

**(b) (i) White ppt insoluble 1mk**

**Mg<sup>2+</sup> or Ca<sup>2+</sup> may be present ½**

**(ii) White ppt formed ½**

**Ca<sup>2+</sup> present**

**(iii) No white ppt**

**Absence of SO<sup>2-</sup><sub>4</sub> or SO<sup>2-</sup><sub>3</sub> (½)**

(iv) White ppt  $\frac{1}{2}$   
 Cl<sup>-</sup> present  $\frac{1}{2}$

- (c) (i) Effervescence occurs/ bubbles (1) and hissing sound  
 Presence of CO<sub>3</sub><sup>2-</sup>  $\frac{1}{2}$   
 (ii) White ppt insoluble in excess  $\frac{1}{2}$   
 Mg<sup>2+</sup> or Ca<sup>2+</sup> present  $\frac{1}{2}$

**II**

- (a) Burns with yellow flame  $\frac{1}{2}$   
 Inflammable substance or organic  
 (b) (i) pH is 5-6  
 Weak acid (H<sup>+</sup> ions in)  
 (ii) Effervescence  
 - H<sup>+</sup> ions in Q

**MIGORI - NYATIKE DISTRICT**

1. (a)

Table 1

Piece of Magnesium added	1	2	3	4	5	6
Length of Magnesium added (cm)	2	4	6	8	10	12
Time taken t (second)	150	190	225	295	430	500
Reciprocal of time $\frac{1}{t}$ (S <sup>-1</sup> )	0.00667	0.00526	0.00444	0.0033	0.00233	0.002

(ii)  $\frac{1}{t} = 0.00510 \sqrt{1/2}$  From the graph and must be shown. Showing.  $\sqrt{1/2}$

$$t = \frac{1}{0.00510} \sqrt{1/2} = 196.5 \text{ seconds. } \sqrt{1/2}$$

(iv) Moles of Mg =  $\frac{0.12}{24} \sqrt{1/2} = 0.005 \text{ moles } \sqrt{1/2}$

Moles of  $\text{H}_2\text{SO}_4$  used = 0.005 moles (1 : 1)

(v) Increase in length of M of ribbon results in decrease in  $\left[ \frac{1}{t} \right] \sqrt{1/2}$

This is done to gradual decrease in the concentration of the acid.  $\sqrt{1/2}$

Table II

Titration	I	II	III
Find burette reading (cm <sup>3</sup> )	15.3	30.5	45.7
Initial burette reading	0.0	15.3	30.5
Volume of solution B used (cm <sup>3</sup> )	15.3	15.2	15.2

CT = 1

D = 1

AC = 1

PA = 1

5mks

Penalty:

(i) Penalize ½mk for inverted table.

(ii) Penalize ½mk to unrealistic titre values e.g. volume cm<sup>3</sup> unless explained.

(iii) Penalize ½mk for wrong arithmetic.

B- Use of decimals ....1mk

(Tied to 1<sup>st</sup> and 2<sup>nd</sup> rows)

Conditions

(i) Accept 1 decimal place / point if used consistently.

(ii) Accept 2 decimal points, however the 2<sup>nd</sup> decimal point must be either 0.0 or 5.

Penalty

(i) Penalize fully if decimals are not used consistently

(C) Accuracy ....1mk

(i) Conditions (i) If any of the volume used is within  $\pm 0.1\text{cm}^3$  of the school value (S.V)...

(ii) If there is one value within  $\pm 0.2\text{cm}^3$  of the school value (S.V)... ( ½mk)

(D) Principles of averaging.....1mk

Conditions

(i) If 3 titrations done are consistent and averaged....

(ii) If 3 titrations done and 2 are consistent and averaged ....1mk

(iii) If 2 titrations done and are consistent and averaged....1mk

(iv) If titration done ...1mk

(v) If 3 titrations done and are inconsistent and averaged ....0mk

- (vi) If 2 consistent titrations averaged...0mk  
 (vii) If 3 titrations are done and are consistent but are averaged .....0mk

(E) Final answer .....1mk

Conditions

- (i) If the answer of the titre value is within  $\pm 0.1\text{cm}^3$  of the school value (S.V) award....1mk  
 (ii) If the answer of the titre value is within  $\pm 0.2\text{cm}^3$  of the school value ....  $\frac{1}{2}$ mk  
 (iii) If the answer is not within  $\pm 0.2\text{cm}^3$  of the school value (S.V) award....0mk

(e) Average volume of solution H used

$$\frac{24.5 + 24.4 + \cancel{24.3}}{3} = 24.4 \quad \checkmark^{1/2}$$

$$\text{II. } \frac{24.4 \times 0.04}{1000} = 0.000976 \quad \checkmark^{1/2}$$

$$\text{III. } \frac{5}{2} \times 0.000976 = 0.00244 \quad (\text{penalize } \frac{1}{2} \text{ for wrong units})$$

$$\text{IV. } \frac{3}{\frac{250 \times 0.00244}{25}} = \frac{3}{0.0244} = 122.95$$

= 123 (no units) penalize for units

(f)  $123 - 90 = 33 \quad \checkmark^{1/2}$   
 $16 + (2x1) = 18x = 33$   
 $x = \frac{33}{18} = 1.833$   
 $x = 2 \quad \checkmark^{1/2}$

2. (a) (i)

Observation	Inference
- Solid dissolves, yellowish solution. - Colourless fumes/vapour are produced. - boiling tube becomes warm.(1 mk)	- Soluble compound. - Mix with water is exothermal heat is produced. (1 mk)

(ii)

Observation	Inference
- Blue litmus turns red. - No effect on litmus paper.	- Presence of $\text{H}^+/\text{H}_3\text{O}$ in the solution. - Solution is acid (1 mk)

(iii)

Observation	Inference
- White ppt. soluble in excess. (1 mk)	- $\text{Pb}^{2+}$ , $\text{Zn}^{2+}$ , $\text{Pb}^{3+}$ present. (1 mk)

(iv)

Observation	Inference
- White ppt. persisted insoluble in excess	- $\text{Al}^{3+}$ or $\text{Pb}^{2+}$ probably present

(v)

Observation	Inference

- Mixture remains colourless/ No yellow ppt. seen. (1 mk)	- Pb <sup>2+</sup> absent (1glim). - Al <sup>3+</sup> present
---	--

(vi)

Observation	Inference
- White ppt. seen. (1 mk)	- SO <sub>4</sub> <sup>2-</sup> , CO <sub>3</sub> <sup>2-</sup> , SO <sub>3</sub> <sup>2-</sup> absent - Cl <sup>-</sup> is present (probably present)

(B(b))

Observation	Inference
- Solid melts forming a colourless and ignites /burns with Smoky / sooty flame. (1 mk)	- Low compound organic compound/presence of or $\begin{array}{c} \diagdown \\ \text{C} \\ \diagup \end{array} \equiv \begin{array}{c} \diagup \\ \text{C} \\ \diagdown \end{array}$ (accept absence of saturated organic compound). (1 mk)

(c) (i)

Observation	Inference
- Dissolves in water forming colourless solution	- Solution compound /polar compound

(ii)

Observation	Inference
- Effervescence/ fizzling/bubbles of a colourless gas. - No effect on litmus paper.	Presence of – COOH/ H <sup>+</sup> /H <sub>3</sub> O <sup>+</sup> ions. Solution is acid. (1 mk)
Observation	Inference
- The solution remained orange.	- Absence of R-OH. (1 mk)

(iii)

Observation	Inference
Solution turns from purple to colourless solution is decolourised (1 mk)	- Presence of of –C≡C-

 $\frac{19.4}{1000} \times 0.014985 \sqrt{1/2} = 0.0002907 \sqrt{1/2}$

i) 1 Mole of MnO<sub>4</sub> reacts with 2.5 moles of S.

∴ Moles of MnO<sub>4</sub> in (h) reacts with 2.5 x moles in (h) of S.

∴ 25 cm<sup>3</sup> of S will contain 2.5 x 0.0002907 √1 = 0.0007267 √1

j)  $\frac{1000}{25}$  x Answer in (i)

$\frac{1000}{25} \times 0.0007267 \sqrt{1/2} = 0.029068 \text{ M} \sqrt{1/2}$

k) Answer in (j) ⇒ 5.0g

1 Mole of S =  $\frac{1 \times 5.0}{\text{Answer in (j)}}$

=  $\frac{1 \times 5.0}{0.029068 \sqrt{1/2}}$

= 172.0g √1/2

= 172.0g √1/2

$H_2X \cdot 2H_2O = 172.0$

$2(1) + X + 2(18) = 172.0 \sqrt{1}$

$X + 38 = 172.0$

$X = 172.0 - 38 \sqrt{1/2}$

= 134.0 √1/2

Q. 2. a)	<u>Observations</u>	<u>Inferences</u>
	<ul style="list-style-type: none"> <li>- Colourless vapour condenses on the cooler parts of the test tube</li> <li>- Moist blue litmus paper remains blue and red litmus paper remains red.</li> <li>- White powder.</li> </ul> Any 2 = 1 mk	Hydrated salt / water crystallization √1 /OH-

b)	<u>Observations</u>	<u>Inferences</u>
	<u>Dissolve</u> √1/2 to form a	Soluble salt / substance / compound. √1/2

colorless  $\sqrt{1/2}$  solution.

i) <b>Observations</b> White precipitate $\sqrt{1/2}$ Insoluble $\sqrt{1}$ in excess	<b>Inferences</b> $Ca^{2+}, Mg^{2+}, Ba^{2+}$ $3 = 1 \text{ mk}$ $2 = 1/2 \quad 1 = 0 \text{ mk}$
ii) <b>Observations</b> White precipitate $\sqrt{1}$	<b>Inferences</b> $Ca^{2+}, Ba^{2+}$ $2 = 1 \text{ mk}$ $1 = 1/2 \text{ mk}$
iii) <b>Observations</b> No white precipitate. $\sqrt{1}$	<b>Inferences</b> $SO_4^{2-}$ $\sqrt{1}$ absent
iv) <b>Observations</b> White precipitate <u>dissolves</u> $\sqrt{1/2}$ on boiling and <u>re-appears</u> $\sqrt{1/2}$ on cooling	<b>Inferences</b> $Cl^{-1}$ $\sqrt{1}$

**Q.3 a) Observations**  
Burns with yellow  $\sqrt{1}$  smoky/  
sooty flame

<b>Inferences</b> <del><math>C = C</math></del> or $-C \equiv C-$ , Long chain hydrocarbon, unsaturated organic compound, hydrocarbon with high C : H ratio. Any $1 = 1 \text{ mk}$
---

**b) Observations**  
Dissolves  $\sqrt{1}$  to form a  
colourless solution.

<b>Inferences</b> Polar organic $\sqrt{1}$ compound / polar substance
--

**i) Observations**  
 $KMnO_4$   $\sqrt{1}$  decolorized / changes  
from purple to colourless.

<b>Inferences</b> <del><math>C = C</math></del> $-C \equiv C-$ $2 = 1 \text{ mk} \quad 1 = 1/2 \text{ mk}$
--

**ii) Observations**  
Methyl Orange turns  $\sqrt{1}$   
pink / red.

<b>Inferences</b> $\sqrt{1} H^+ / H_3O^+ / -C \begin{array}{l} \text{O} \\    \\ \text{O} - \text{H} \end{array}$
--

**Question 1.**

**Table 1**

Distributed as follows:

(i) Complete table

Values must be  $\pm 0.2$  of each other

(ii) Decimal place

Values should be n 1d.p or 2d.p consistently used.

(iii) Accuracy

Compare the school value to any of the readings and award as follows:

If  $\pm 0.1$  award 1mk

± 0.2 award ½mk

Outside 0.2 award 0mk

(iv) Principle of averaging

- Award 1mk for consistent value only.
- Penalize ½mk for rounding of the answer to 1d.p unless it divides exactly.
- In consistent values averaged award 0mk

(v) Final answer value to the school to compare the average value to the school value:-

If ±0.1 award 1mk

If ±0.2 award ½mk

If outside award 0mk

### Calculations

(a)  $\frac{\text{Titre I} + \text{Titre II} + \text{Titre III}}{3} = \text{Answer}$

(b)  $\text{NaOH}_{(aq)} + \text{HCl}_{(aq)} \longrightarrow \text{NaCl}_{(aq)} + \text{H}_2\text{O}_{(l)}$   
Mole ratio 1 : 1

0.5M      0.5M

$\frac{25 \times 0.5}{1000} = 0.0125 \text{ moles}$

(c) Mole ratio

NaOH : HCl = 1 : 1

∴ Molarity of NaOH is 0.5M

### Table II

Marking should be done as in table 1.

### Calculations

(a)  $\frac{\text{Titre I} + \text{Titre II} + \text{Titre III}}{3} = \text{Answer}$

(b)  $1000 = 0.5 \text{ moles}$

$100 \text{ cm}^3 = ?$

$\frac{100 \times 5}{1000} = 0.05 \text{ moles}$

$100 \text{ cm}^3 = 0.05 \text{ moles}$

∴  $25 \text{ cm}^3 = ?$

$\frac{25 \times 0.05}{100}$

$= 0.0125 \text{ moles}$

(c) mole ration 1:2

∴ Moles of carbonate =  $\frac{1}{2} \times 0.0125 = 0.00625 \text{ moles}$

(d) 125

### Question 2

#### Table III

Marks should be distributed as follows :

(i) Complete table

- Incomplete table with more than 5 value ½mk

(ii) Decimal

○ Accept whole numbers for time

-  $\frac{1}{t}$  must be decimals not fractions

(iii) Trend in time

- Accept reducing values for time

(iv) Trend in  $\frac{1}{t}$

(b) The value given must shown on the graph

- Conversion of 318K to °C is very important before reading form the graph.

**GRAPH**

- Labeling ½ mk for both axes
- Scale ½ k (at least ¾ pg)
- Plotting 1mk
- Shape 1mk (should be a curve)

(c) As the temperature is increased the time taken for the reaction to take place is reduced due to high collision of particles hence the rate of reaction will be high.

Rate of reaction is directly proportional to increase in temperature.

**Question 3**

**Procedure 1**

White precipitate	Ba <sup>2+</sup> , Pb <sup>2+</sup> , Ca <sup>2+</sup> present N/B (i) All 3 ions award 1mk (ii) Any 2 ions award ½ mk (iii) Only 1 ion given award 0mk
No white precipitate	Ba <sup>2+</sup> , Ca <sup>2+</sup> present (i) Award 1mk for 2 ions (ii) Award ½ mk or any ion of the two given
Pink solution s formed	OH <sup>-</sup> ions present Reject- solution is basic or allealine or a base
Brick- red flame	Ca <sup>2+</sup> confirmed N/B – Award 1mk if it appears in either (a) or (b) above otherwise give zero.

**Procedure 2**

(a) Effervescence of bubbles of gas	H <sup>+</sup> present R – COOH present
(b) Purple colour gets decolourized	C = C or - C ≡ C - Present
(c) Fruity or sweet smell	R – COOH confirmed

**MUMIAS DISTRICT**

TABLE 1, (5 mks)

Distributed as follows:

i) Complete table (1 mk)

Values must be ± 0.2 of each other.

ii) Use of decimal (1 mk)

Values should be in 1d.p or 2d.p consistently used

iii) Accuracy (1 mk)

Compare the school value to any of the readings and award as follows

IF  $\pm 0.1$  award 1 mk

IF  $\pm 0.2$  award  $\frac{1}{2}$  mk

Outside  $\pm 0.2$  award 0 mk

iv) Principle of averaging (1 mk)

- Award 1 mk for consistent values averaged
- Penalize  $\frac{1}{2}$  mk for rounding off the answer to 1d.p unless it divides exactly
- Inconsistent values averaged – award 0 mk

v) Final answer 1mk

- Compare the averaged value to the school value

If  $\pm 0.1$  award 1 mk

If  $\pm 0.2$  award  $\frac{1}{2}$  mk

If outside  $\pm$  award 0 mk

### CALCULATIONS

a) 
$$\frac{\text{Titre I} + \text{Titre II} + \text{Titre III}}{3} = \text{Answer}$$

b) 
$$\text{RFM of acid} = 2 + 2(912) + 4(16) + 2(2 + 16)$$
$$= 126$$

If 500cm<sup>3</sup> contains 6.3 g

1000cm<sup>3</sup> contains ?

$$6.3 \times 1000 = 12.6\text{dm}^3$$

Concentration = 12.6g/dm<sup>3</sup>

Or 0.1 M

c) Molarity of solution C

Acid : Alkali

1 : 2

If 1000cm<sup>3</sup> contains 0.1 moles

25cm<sup>3</sup> contains ?

$$\frac{25 \times 0.1}{1000} = 0.0025 \text{ moles}$$

From mole ratio: 25cm<sup>3</sup> of alkali contains

$$0.0025 \times 2 = 0.005 \text{ moles}$$

If 25cm<sup>3</sup> alkali contains 0.005 moles

$$100\text{cm}^3 \text{ alkali contains } \frac{0.005 \times 1000}{25}$$

$$= 0.2 \text{ moles}$$

$$\text{Molarity} = 0.2 \text{ M}$$

Procedure 2

TABLE 2

Marking should be done as in table 1

### CALCULATION

a) 
$$\frac{\text{Titre I} + \text{Titre II} + \text{Titre III}}{3} = \text{answer}$$

b) 25cm<sup>3</sup> of NaOH contains 0.005 moles

Mole ratio 1 : 1

Moles of acid = 0.005 moles

If Titre in (a) of solution D contains 0.005 moles

1000cm<sup>3</sup> of solution D contains:

$$\frac{0.005 \times 1000}{\text{Titre in a}} = \text{answer in moles}$$

c) 10cm<sup>3</sup> of A contains moles in (b) above

1000cm<sup>3</sup> of A contains

$$\frac{\text{Ans in b} \times 100}{10} = \text{Answer}$$

**NB This answer should be close or equal to 4.0M**

### Question 2

TABLE 3 (5 mks)

Distributed as follows

i) Complete table (1mk)

- Award 1 mk for completely filled table (at least 8 values)

ii) Use of decimals (2 mks)

- Use of decimals for temperature readings award 1 mk
- Use of correct decimals for time readings award 1 mk

**NB Penalize ½ mk if i/t is given as fraction**

iii) Trends

Trend for temperature 1mk (i.e. should be decreasing)

Trend for time 1 mk (should be increasing)

### GRAPH

Should be distributed as follows:

- Labelling the axes ½ mk for both axes
- Scale ½ mk (at least ¾ pg)
- Plotting 1 mk
- Shape (accept a curve and award 1 mk)

### Question 3

Test for solid K

	Observations	Inferences
a)	- colorless liquid condenses at the cooler parts of the test tube - Cracking sound produced	- Presence of hydrated substance - Contains water of crystallization
b)i)	- White precipitate soluble in excess	- Al <sup>3+</sup> , Zn <sup>2+</sup> or Pb <sup>2+</sup> ions present 3 stated 1mk, 2 stated ½ mk
ii)	No white precipitate formed	- Presence of Al <sup>3+</sup> and Zn <sup>2+</sup> - NB must have been correctly inferred in part b(i)
iii)	White precipitate formed	Presence of SO <sub>4</sub> <sup>2-</sup> or Cl <sup>-</sup>

	<i>Test for solid F</i>	<i>Award 1 mk for any 2 Award ½ mk for any 1 10n given</i>
c)	<i>Effervescence or bubbles produced</i>	<i>Presence of H<sup>+</sup>, H<sub>3</sub>O<sup>+</sup>, R-COOH</i>
d)	<i>Decolorises acidified KMnO<sub>4</sub> or turns KMnO<sub>4</sub> to colourless</i>	<i>Presence of reducing agent C = C - C = C- Or ROH, SO<sub>3</sub></i>
e)	<i>Fruity or sweet smell</i>	<i>R- COOH confirmed</i>

### RACHUONYO DISTRICT

$\frac{1}{2}$

1. a) Moles of Hcl present in  $50\text{cm}^3 = \frac{50 \times 1}{1000} = 0.05 \text{ moles}$

i) Complete table (1 mark)

- 3 titrations done-

- 2 titrations done

- 1 titration done

NB: Penalise  $\frac{1}{2}$  mark to a max of  $\frac{1}{2}$  mark for;

- inverted table

- wrong arithmetic

- burette readings beyond  $50 \text{ cm}^3$  except where explained

- Unrealistic (below  $1 \text{ cm}^3$ )

ii) Use of decimals (1 mark)

- 1d.p or 2 d.p throughout
- for 2 d.p the 2<sup>nd</sup> digit is either 0 or 5 otherwise penalize fully

iii) Accuracy (1 mark)  
 - Compare to teachers values. If any is within;  
 0.1 of teachers value  
 0.2 of teachers value  
 Beyond 0.2 of teacher value

iv) Averaging  
 If 3 averaged within 0.2 of each other  
 If 2 averaged within 0.2 of each other  
 If 3 or 2 averaged but outside 0.2 of each other

v) final answer (1 mark)  
 Compare to teachers average title. If within;  
 0.1 of teachers value  
 0.2 of teachers value  
 Beyond 0.2 of teachers value

c) i)  $\text{Volume of NaOH} = \frac{\text{Title} \times 250}{25}$   
 = correct ans  $\frac{1}{2}$

ii)  $\text{Moles of NaOH} = \frac{\text{Ans c (i)} \times 0.1}{1000}$   
 = correct ans  $\frac{1}{2}$

<i>White precipitate insoluble in excess</i>	<i>Pb<sup>2+</sup> or Al<sup>3+</sup></i>

iii)

<i>Observation</i>	<i>Inferences</i>
<i>Yellow precipitate</i>	<i>Pb<sup>2+</sup> present</i>

### KAKAMEGA NORTH DISTRICT

*Procedure;*

*TABLE A;*

<i>Initial temp of CuSO<sub>4</sub>(c)</i>	<i>25.5</i>
<i>Final temp of CuSO<sub>4</sub></i>	<i>31.0</i>
<i>Temp change T(C)</i>	<i>5.5</i>

*TABLE B;*

*Mocks Topical Analysis*

*educationgroup.com*

283

Initial temp of CuSo4(c)	25.5
Final temp of CuSO4	48.0
Temp change T(C)	22.5

- a) i) Exothermic// there is temperature rise heat energy is released to the environment  
 ii) Moles of CuSO4(aq) =  $0.2 \times \frac{25}{1000} = 0.005$
- b) i)  $\Delta H = 25g \times 4.2Jg^{-1}K^{-1} \times 5.5K$  (OR  $\Delta T$ )
- c) i) Powdered metals have increased surface area many metal particles with come in contact  
 with HCL acid and react  
 ii) Grey// metallic grey
- d) - Metal A dissolves in CuSO4(aq) solution and a green/ pale green solution is formed  
 - The blue colour of copper (II) sulphate solution fades/ disappears. Brown solid deposited  
 - Metal A displaces copper; from its solution implying that A(q) is more reactive than Cu(s)
- e) i)  $\Delta H = 25g \times 4.2Jg^{-1}K^{-1} \times \Delta T$  (22.5) K = 2362JJ  
 If 0.5g \_\_\_\_\_ 2362.5J  
 $\therefore 65g \frac{(65 \times 2362.5) J}{0.5} = 307125J \text{ mol} = 307.125KJmol$
- ii) B, A  
 \_\_\_\_\_ Decreasing reactivity

B gave higher  $\Delta T$ // more heat energy was released when B reacted with CuSO4(aq)

### Procedure;

#### Table of results

EXPERIMENT	I	II	III
Final Vol. of solution C (cm3)			
Initial Vol.of solution C (cm3)			
Vol.of solution C used (cm3)			

1. a) Volume of pipette = 25cm<sup>3</sup>
- b) Average volume of C =  $\frac{38.5 + 38.5 + 38.5}{3} = \frac{115}{3} = 38.5$
- c) Moles of solution C =  $0.1 \times \frac{38.5}{1000} = 0.00385$
- d) i)  $HCL_{(aq)} + MOH_{(aq)} \rightarrow MCL_{(aq)} + H_2O_{(L)}$   
 Penalize  $\frac{1}{2}$  for wrong or missing s
- ii)  $H^+_{(aq)} + OH^-_{(aq)} \rightarrow H_2O_{(L)}$
- iii)  $HCL_{(aq)} : MOH_{(aq)}$

$$\begin{array}{l} 1 \\ 0.00385 \end{array} : \begin{array}{l} 1 \\ 0.00385 \end{array}$$

$$e) \quad i) \frac{M_A V_A}{M_B V_B} = \frac{1(MR)}{1} \quad \text{where } A = HCl_{(aq)} \quad B = MOH_{(aq)}$$

$$\text{Therefore } M_B = \frac{0.1 \times 38.5 \times 1}{25 \times 1} = 1.54$$

$$ii) \text{ R.M.M} = \frac{\text{mass per litre}}{\text{molarity}} = \frac{6.16}{0.154} = 40$$

$$\begin{aligned} iii) \text{ MOH} &= 40 \\ M + 17 &= 40 \\ M &= 40 - 17 = 23 \end{aligned}$$

Observation	Inference
a) White fine crystal solid	Absence of coloured salts e.g. $Cu^{2+}$ , $Fe^{2+}$ or $Fe^{3+}$ absent
b) E dissolved to form a colourless solution	E is a soluble salt
i) No observable change No ppt	Absence of insoluble hydroxides
ii) No observable change No ppt	Absence of ions that form isol. Ppt with $NH_3(aq)$
iii) White ppt. insoluble in acid	$SO_4^{2-}$ ions present $SO_3^{2-}$ ions absent
iv) White ppt. insoluble in acid	Confirms the presence of $SO_4^{2-}$ ions
v) Nichrome wire burns with a yellow flame	Confirms the presence of $Na^+$ ions

### BUTERE DISTRICT

**TABLE 1**

**1. Complete table**

**Penalties**

- Unrealistic burette reading.
- Arithmetic error
- Inverted table.

N/B Penalize  $\frac{1}{2}$  mk each to a max. of  $\frac{1}{2}$  mk

**2. Use of decimal.**

- Consistent 1 d.pt. or 2 d.pt. –
- If 2 d.pt. the last digit must be zero or five.
- Otherwise award 0
- Accept the consistency of zero.

**3. Accuracy**

- Tied to the school value.
- Check any of the titre readings.
  - (i) If any of them is within  $\pm 0.1$  from S.V. award
  - (ii) If within  $\pm 0.2$  unit award – ( $\frac{1}{2}$  mk).
  - (iii) If outside  $\pm 0.2$  unit award zero.

**4. Principle of Averaging.**

- (i) 3 consistent values average –
- (ii) 2 consistent values averaged – ( $\frac{1}{2}$  mk)
- (iii) Otherwise award 0.

**Penalties**

(i) Answer should be at least 2 d.p. unless divided exactly.

b) No. of moles  $M_2 = \frac{\text{ans(a)} \times 1}{1000}$  ✓1

Correct ans. ✓1

(i) Balancing =  $\frac{1}{2}$  mk

(ii) States (correct) =  $\frac{1}{2}$  mk

d) Moles of base =  $\frac{1}{2} \times \text{ans. (b)}$  ✓1 mk  
= correct answer ✓1 mk

e) Concentration = answer in (d)  $\times \frac{1000}{25}$  ✓1 mk

= Correct answer ✓1 mk

f) Mass of  $Na_2CO_3 = 106 \times \text{ans. (e)}$  ✓1 mk

= Correct answer ✓1 mk

g) Mass of NaCl =  $95 - \text{ans. (f)}$  ( $\frac{1}{2}$ )

% of NaCl =  $\frac{95 - \text{ans. (f)}}{95} \times 100$

= Correct answer ✓ $\frac{1}{2}$

2. a) TABLE 2

(i) Complete table 1 mk

(ii) Accuracy to S.V. 1 mk

(iii) Decimal 1 mk

(iv) Trend. 1 mk

b) Graph

Labeling – 1 mk  
Plotting – 1 mk  
Scale – 1 mk  
Shape – 1 mk

c) (i) - Shown in graph ( $\frac{1}{2}$  mk)

- Correct reading ( $\frac{1}{2}$  mk)

(ii)  $\Delta T$  shown in graph - ( $\frac{1}{2}$  mk)

Correct answer from graph - ( $\frac{1}{2}$  mk)

$$d) \Delta H = MC\Delta T = (23 + c(i) \times 4.2 \times c(ii)) \quad \checkmark 1 \text{ mk}$$

Correct answer

$$e) \text{ Moles} = \frac{1 \times 23}{1000} \checkmark \frac{1}{2} = 0.023 \text{ moles} \quad \checkmark \frac{1}{2}$$

$$f) \text{ Molar heat} = \frac{1 \times \text{ans. (d)}}{\text{ans. (e)}} \quad \checkmark 1$$

= Correct answer.  $\checkmark 1$

	Observation	Inferences
a)	Colourless solution forms $\checkmark 1$	Soluble salt/ Absence of coloured ions / $Fe^{2+}$ , $Fe^{3+}$ , $Cu^{2+}$ absent $\checkmark 1$
b)	White ppt $\checkmark 1$ soluble $\checkmark 1$ in excess	$Ba^{2+}$ , $Pb^{2+}$ , $Zn^{2+}$ , or $Al^{3+}$ present. $\checkmark 1$
c)	White ppt. insoluble in excess. $\checkmark 1$	$Ba^{2+}$ , $Pb^{2+}$ , or $Al^{3+}$ present. $\checkmark 1$
d)	No white ppt. // no ppt. $\checkmark 1$	$SO_4^{2-}$ absent. $\checkmark 1$

### CALCULATIONS

b. (i) Moles of soltn P =  $\frac{\text{average titre} \times 0.2}{1000}$   $\frac{1}{2}$  mk

= correct Ans.  $\checkmark \frac{1}{2}$ mk

b. (iii) 25cm<sup>3</sup> soltn. S = Moles in Ans. b(ii)  
100cm<sup>3</sup> soltn. S = ?  
=  $\frac{100}{25} \times \text{Ans. b(ii)}$   $\frac{1}{2}$ mk

= Correct Ans.  $\frac{1}{2}$ mk

(c) 100cm<sup>3</sup>  $\longrightarrow$  soltn S Moles in Ans. b(iii)  $\checkmark$   
200cm<sup>3</sup> Soltn S  $\longrightarrow$   $\frac{200}{100} \times$  moles in Ans. b(iii)  $\frac{1}{2}$ mk

$\therefore$  moles in 25cm<sup>3</sup> NaOH =  $\frac{200}{100} \times$  moles in Ans. b(iii)  $\frac{1}{2}$ mk

= 2 x moles n Ans. b(iii)  $\checkmark$   
= Correct Ans.  $\checkmark \frac{1}{2}$ mk

(f) Moles of R in 25cm<sup>3</sup> = Ans. (e)  
Moles of R in 1000 = ?  
=  $\frac{1000}{25} \times \text{Ans (e)}$   $\frac{1}{2}$ mk

= corr. Ans.  $\frac{1}{2}$ mk

(g) (i) Molar mass of H<sub>2</sub>SO<sub>4</sub> =  $\frac{49 \times 1}{\text{Moles in (f)}}$

= Corr. Ans.

(g) (ii) Let R.A.M of A be equal to a

∴ 2 + a = Ans. g(i)

a = Ans. g(i) - 2

= Corr. Ans.

2. (a) Table III.....

- Distributed as follows:-

Complete table .....

- All columns filled 1mk

- Any 4 correctly filled ½mk

- Otherwise penalize fully

Accuracy.....

Compare candidate's initial temperature with S.V; if with ± 0.2 units award 1mk, otherwise penalize fully.

Trend.....1mk

Award 1mk for, increase then constant

(b) Award 4mks distributed as follows

Correct labelling.....1mk

Correct plotting.....1mk

Curve/line.....1mk

Appropriate scale.....1mk

4mks

(c) (i) Award 1mk for correct reading

(ii) Highest temperature-initial temp = corr.ans.

(d) Heat change = MCΔT ✓ (½mk)

= corr Ans (½mk)

(e) No. Vol. from highest temp change

(f) Moles used =  $\frac{\text{vol. in (e)} \times 10}{1000}$

1000

= Corr. Ans.

∴ Moles in (f) produce → heat change (dY)

1 mole = ?

=  $\frac{1 \times \text{Heat change in (d)}}{\text{Moles in (f)}}$

Moles in (f)

= Correct answer (½mk)

3. (a) Observations

Inferences

- Dissolves ½mk to form a colourless Solution ½mk

- Absence of coloured ions e.g. Cu<sup>2+</sup>, Fe<sup>2+</sup>, Fe<sup>3+</sup>

i) To the first portion, add Nitric acid followed by Barium nitrate solution.

Observations

Inferences

White ppt, insoluble in nitric acid

SO<sup>2-</sup> ions present

ii) To the second portion, add Nitric acid, followed by lead(ii) Nitrate solution

Observations

Inferences

Mocks Topical Analysis

educationgroup.com

SO<sup>2-</sup> confirmed

White ppt, ½mk insoluble in nitric acid ✓  
½ mk

<b>iii) To the third portion, add a few drops until in excess</b>	
<b>Observations</b>	<b>Inferences</b>
White ppt, ½mk soluble in excess ½ mk	Al <sup>3+</sup> , Pb <sup>2+</sup> or Zn <sup>2+</sup> present
	N/B - All three mentioned - 1mk Any two mentioned - ½mk Only 1 mentioned - 0mk
<b>iv) To the fourth portion, add a few drops until in excess</b>	
<b>Observations</b>	<b>Inferences</b>
White ppt, ½mk soluble in excess ½mk	Zn <sup>2+</sup> confirmed

### TRANSNZOIA WEST DISTRICT

- Q1.**
- i) Complete table with 3 titrations done – 1 mark**
  - ii) Incomplete table with 2 titrations done – ½ mark**
  - iii) Incomplete table with 1 titration done – 0 marks**

#### **Penalties**

- i) Wrong arithmetic**
- ii) Inverted table**
- iii) Unrealistic values**

**Penalize ½ mark for each to maximum of ½ mark**

#### **Decimals (1 mark)**

##### **Conditions**

- i) Accept either 1 or 2 decimal point consistently.**
- ii) If 2 decimal point used the 2<sup>nd</sup> decimal point can only be 0 or 5**

#### **Accuracy 1 mark**

**Compare any litre values in the 3<sup>rd</sup> row with the school value (sv)**

#### **Conditions**

- i) If within 1 0.1cm<sup>3</sup> of S.V 1 mark**
- ii) If within 1 0.2 of S.V ½ mark**
- iii) Beyond 1 0.2 of SV 0 mark**

**N.B If there is wrong arithmetic in the table compare the SV with the correct value and credit accordingly**

#### **d) Principle of averaging**

**1 mark**

**Values averaged must be shown and must be within 1 0.2cm<sup>3</sup> of each other**

#### **Conditions**

- i) 3 values averaged and consistent -**

**1 mark**

- ii) 3 values done and only 2 possible averaged 1 mark  
 iii) 2 titrations done and averaged 1 mark  
 iv) 2 titrations done inconsistent ½ mark  
 v) 3 titrations done and possible but only two averaged 0 mark

e) Final answer 1mark

NB Compare the SV

i) If within 10.1 of SV 1 mark

ii) If within 1 0.2 of SV ½ mark

If beyond 1 0.2 of SV 0 mark

If the candidate has averaged wrong values, pick the correct value if any, average and credit accordingly

B.  $HB_{(aq)} + NaOH_{(aq)} \xrightarrow{\hspace{2cm}} NaB_{(aq)} + H_2O_{(L)}$  1 mark

C. i)  $\frac{0.2075 \times \text{Volume}}{1000} = \text{Moles}$  1 mark

ii) Reacting ratio 1: 1

∴ Moles of T = answer in C (i) above

iii) Answer in b(ii) above  $\times \frac{1000}{25}$

d) i)  $1.62425g \frac{\hspace{2cm}}{6.497g/l} \frac{250cm^3}{1000cm^3}$   
 $M = \frac{g/l}{Mm}$

∴ mm = 6.497

Answer in b(ii) above

ii) HB = answer in d(ii) - 1

B =

Question 2.

1. 120cm<sup>3</sup> of solution R
2. 80cm<sup>3</sup> of solutions
3. 250cm<sup>3</sup> of tap water
4. 25 or 50ml measuring cylinder
5. 100cm<sup>3</sup> glass beaker
6. 5 x5cm piece of white paper
7. Stop watch or clock

Q2. Table II

Experiment	1	2	3	4	5
Time for ribbon to disappear (sec)	12	18	22	32	96
$i/t$	0.083	0.0560	0.045	0.03125	0.0104

a) Table

Marking areas

i) Complete table

Penalties

- Penalize  $\frac{1}{2}$  mark for each space not filled
- Reject fractions for  $\frac{1}{t}$  and award a max of  $1\frac{1}{2}$  for table
- If fractions appear followed by an extra column of decimals, ignore the fractions and award accordingly
- Penalize  $\frac{1}{2}$  mark each for wrong arithmetic in the value of  $\frac{1}{t}$  not within an error of  $\pm 2$  units in the 3<sup>rd</sup> decimal place unless it divides exactly
- Accept reciprocals given to at least 3 decimal places otherwise penalize  $\frac{1}{2}$  mark each for rounding off to the 2<sup>nd</sup> decimal place to a max of 1 mark unless it divides exactly
- Penalize  $\frac{1}{2}$  mark for every reading  $< 5$  and  $> 120$  seconds in the time row
- Penalize  $\frac{1}{2}$  mark for each entry not in seconds

ii) Use of decimals

(Tied to the 4<sup>th</sup> row only)

- Accept a whole numbers or decimals up to the 2<sup>nd</sup> decimal place only used consistently, otherwise penalize fully

iii) Accuracy

(Tied up to the 4<sup>th</sup> row only)

- Compare the candidates 1<sup>st</sup> reading to the S.V and if within  $\pm 2$  sec, award 1 mark, otherwise penalize fully

iv) Trend

(Tied to the 4<sup>th</sup> row only)

- Award 1 mark if time is continuously increasing otherwise penalize fully

b) Graph

i) Labeling of both axes

Condition

- Penalize  $\frac{1}{2}$  mark for wrong units used in any of the axis
- Penalize  $\frac{1}{2}$  mark for inverted axes
- Accept if units are not shown. Otherwise if shown they **MUST** be correct
- Both axes **MUST** be labeled

ii) Scale

- Area covered by the actual plots including the origin should be  $\frac{2}{3}$  more of the squares provided in both axes
- The scale interval should be consistent

iii) Plotting

- Award 1 mark if 4 or 6 plots are correctly plotted
- Award  $\frac{1}{2}$  mark if 2 or 3 plots are correctly plotted
- Accept plots even if the axes are inverted
- Accept rounding off the values of  $\frac{1}{t}$  to the 3<sup>rd</sup> decimal point when plotting

iv) Line

- Accept a straight line passing through at least 2 points correctly plotted and through the origin (0,0) for 1 mark or if extrapolated can pass through the origin

c) – Showing  $\frac{1}{t}$  on the graph

- Stating the correct reading of  $\frac{1}{t}$  at  $36\text{cm}^3$
- Applying the expression that time =  $\frac{1}{t}$  correct reading

Correct answer

d) Rate decrease with decrease in concentration of hydrochloric acid or vice versa

OR

Rate and concentration are directly proportional

Condition

- Tied to the correct graph or trend in the table
- If volume is used in place of conc. Award  $\frac{1}{2}$  mark

3. a)

Observations	Inferences
a) White solid sublimes	Chloride of $AL^{3+}$ or $NH_4$
b) White solid dissolves to form a colourless solution that turns blue litmus red	$AL^{3+}$ ions
i) No white ppt formed	$SO_4^{2-}$ or $SO_2^{3-}$
ii) A white ppt is formed which is insoluble in excess but dissolves on warming	CL present
iii) A colourless gas with a pungent smell and which turns moist red litmus blue is given off. A white ppt is formed which is soluble in excess NaOH	$NH_4^+$ present $AL^{3+}$ present
A white ppt is formed which is insoluble in excess aqueous ammonia	$AL^{3+}$ confirmed

b)

Observations	Inferences
i) Brown colour of bromine water is decolourized - Accept bromine water become colourless	
Effervescence/ bubbles/ fizzing sound	$H^+$ present - COOH present
Orange colour of potassium dichromate VI remain unchanged	OH present

iii) To the third portion add a few drops of acidified potassium dichromate (VI)

Q 1. Table 1 (5 mks)

a) Complete table (1 mk)

- Penalize  $\frac{1}{2}$  mk for arithmetic error or unrealistic value to a maximum of  $\frac{1}{2}$  marks

b) Use of decimal (1 mark)

- Candidates to use 1 d.p or 2 d.p throughout in 1<sup>st</sup> and 2<sup>nd</sup> rows

c) Accuracy (1 mark)

$\pm 0.2$  the S.V  $\sqrt{\frac{1}{2}}$  NB Any one value from the table

$\pm 0.1$  the S.V  $\sqrt{1}$

d) Principles of averaging (1 mark)

$$\frac{-I + II + III}{3} \sqrt{\frac{1}{2}}$$

- Correct answer  $\sqrt{\frac{1}{2}}$

e) Final answer

Average of the candidate compared with school value (S.V)

$$\pm 0.2 \sqrt{\frac{1}{2}}$$

$$\pm 01 \sqrt{1}$$

ii) Moles of N =  $\frac{25 \times 0.1}{1000} \sqrt{\frac{1}{2}}$

$$= 0.0025 \sqrt{\frac{1}{2}}$$

iii)  $HCL_{(aq)} + NaOH_{(aq)} \longrightarrow NaCL_{(aq)} + H_2O_{(L)}$

Balanced  $\sqrt{\frac{1}{2}}$

State symbols  $\sqrt{\frac{1}{2}}$

iv)  $HCL : NaOH \sqrt{1}$

$$1 : 1$$

Moles of M =  $\frac{1 \times 0.0025}{1} \sqrt{\frac{1}{2}}$

$$= 0.0025 \sqrt{\frac{1}{2}}$$

v) Average titre  $\longrightarrow 0.0025$

$$1000 \text{ cm}^3 \longrightarrow ?$$

$$= \frac{1000 \times 0.0025}{\text{Average titre}} \sqrt{1/2}$$

$$= \text{Correct answer} \sqrt{1/2}$$

vi)  $\frac{\text{Answer (V)} \times 36.5}{1} \sqrt{1/2}$

$$= \text{Correct answer} \sqrt{1/2}$$

**Table II**

a) As in table I

b)  $\frac{\text{Answer in (v)} \times \text{Titre}}{1000} \sqrt{1/2}$

$$= \text{Correct answer} \sqrt{1/2}$$

d) HCL:  $\text{Na}_2\text{CO}_3$

$$2 : 1 \sqrt{1}$$

$$\frac{1 \times \text{Answer in (b)}}{2} \sqrt{1/2}$$

$$= \text{Correct answer} \sqrt{1/2}$$

e)  $\frac{1000 \times \text{Answer in (d)}}{25} \sqrt{1/2}$

$$= \text{Correct answer} \sqrt{1/2}$$

f) 14.3g/litre  $\sqrt{1}$

g)  $R + M = \frac{\text{Mass in g/h}}{\text{Molarity}}$

$$= \frac{14.3}{\text{Answer in (e)}} \sqrt{1/2}$$

$$= \text{Correct answer} \sqrt{1/2}$$

h) Answer in (g) =  $106 + 18x \sqrt{1/2}$

$$18x = \text{Answer in (g)} - 106$$

$$x = \frac{\text{Answer in (g)} - 106}{18} \sqrt{1/2}$$

$$= \text{Correct answer} \sqrt{1} (\text{should be a whole number})$$

**Q 2. Table**

Each entry  $1/2$  mark

- Penalize  $1/2$  mark to a maximum of 1 mark for unrealistic values
- Penalize  $1/2$  mark mixing decimal numbers and whole numbers

- a) i) Labeling ( $1/2$  mark)
- ii) Scale ( $1/2$  mark)
- iii) Plotting (2 marks)
- iv) Line/ curve (1 mark)

b) i)  $1. \times 5 \sqrt{1/2}$

$$1000$$

$$= 0.005 \sqrt{1/2}$$

$$0.0025 : 0.005 \sqrt{1}$$

$$1 : 2 \sqrt{1}$$

*Balanced*  $\sqrt{1}$

*States symbol*  $\sqrt{1}$

*Balance*  $\sqrt{1/2}$

*States*  $\sqrt{1/2}$

f) *To make the setting of precipitate faster*  $\sqrt{1}$
