Read the passage then answer questions 31 to 40.

Bears have an excellent sense of smell, and a very keen hearing and scent the faintest odour from a great distance. This is fortunate for them, as they are very short-sighted. A breeze arose wafting the odour of something sweet towards Mishook, the bear cub. What could it be? The cub did not know, but his mother and the elder ones recognised the aroma of honey. With hurried steps the whole bear family set off in search of the prize. They trotted along for about a kilometre before they reached the old decayed tree-trunk where the bees had taken up their abode. The poor bees saw the plunderers, and immediately sounded an alarm. They then defended their store of honey by fiercely stinging the
bears.

But the mother bear and her cubs calmly continued their feast of honey, their thick fur protecting them against the attacks of the bees. One angry bee, however, plunged its sting into Mishook’s nose. He growled furiously, shook his head, jumped, snorted, turned round like a spinning-top and it was with great difficulty that he managed to beat off the troublesome insect with his paws. But this repulse did not by any means prevent him from tasting his share of the honey, of which he immediately became very fond.

Read the passage below and answer questions 41 to 50.

There was a time long ago when men did not build houses in which to live. Their homes were caves and wide burrows in the earth. They usually chose the sides of hills, and this allowed them to cluster together. There they found shelter from the sun, the wind, and the rain. These people lived almost like the wild animals, which they hunted to provide themselves with food and clothing.

In countries where canes and long grasses grew in abundance, the natives made huts by weaving the reeds and hanging the woven mats from poles. In some parts of the world these huts were built in the trees.
