Read the passage below then answer the questions that follow.

Bees are very useful to human beings. Did you know that bees are the only animals in the world that make food that humans eat? What you might know, however, is that bees are responsible for pollinating plants that thereafter bear fruits and vegetables that we eat. Bees follow the egg-larvae-pupa - adult life cycle. Adults have six legs and five eyes, two of them compound eyes and the other three tiny simple eyes.

A bee hive can have 50,000-80,000 bees. These bees are divided into three categories; queen bees, drones and innumerable worker bees. The queen bee is responsible for laying eggs and can lay up to 1500 eggs per day.

The worker bees, who are female, work inside and outside the hive. They clean, feed the babies as well as the queen, pack pollen and nectar into cells, build and repair honey combs, fan to cool the hive, and guard the hive from attack.

Drones are males whose job is to mate with the queen bee. They, unlike the worker bees, do not have a sting. Before you feel sorry for the drones, however, note that worker bees die the instance they use their sting.

Bees carry pollen grains on their legs in special packets called pollen baskets. This pollen is a source of protein, which is used to feed baby bees and help them grow. Worker bees gather nectar and pollen from flowers. They have two stomachs, one for eating and the other for storing nectar.

A hive produces five products; honey, wax, pollen, propolis and royal jelly. Honey, which is used by humans for its preservative and anti-bacteria nature, is what a farmer harvests mostly. A simple beehive can make 45 kilogrammes of extra honey.

A honey bee works very hard once its an adult, in a lifespan of three to six weeks. One bee makes a twelfth tea spoonful of honey in its lifetime.

Wax is used in batik printing and is also used to make hair into dread locks. The propolis is used by the worker bees as glue to hold together the honey combs.

The royal jelly that comes from a special gland on the head of the worker bee is fed only to the queen.

A robin sang a sweet melody from a nearby tree. Another one answered from a distance. Guinea fowls chattered from another part of the bush. Masha and Sidi stirred awake. They were sitting upright huddled together for warmth. Their clothes were soaked and Sidi was shivering. It was dawn. The fear of unseen thing in their dark was over. But they were still on the lookout for danger. They were still puzzled by the noise they had heard before drifting into sleep.

"It's time to go," Maisha said in a low voice. They rose up and surveyed the shortest direction to the village. They had gone a few steps when they had a feeling that someone was lurking behind the bushes. They halted and exchanged glances. Something moved in a cluster of bushes. They nearly jumped with fright and then their faces glowed with joy. It was Salim. He was also elated to see them.

"Thank God you are alive," Sidi hugged Salim. "What happened?"

"I should ask you the same. Was it you who coughed last night?"

"Yes," Sidi said.

"I heard you and took you for an enemy," Salim said.

"So I decided not to leave my cover until daylight."

Masha and Sidi had heard something move and just like Salim decided to hide. Confident that there would be no more danger, they talked as they walked through the bushes. The only sounds they could hear were the chirping of birds, the chuckles of guinea fowls from a distance and the croaking of frogs. Suddenly, a strange sound came to their ears. Salim was set to run but Masha held him back. They listened intently.

"Ghosts!" Salim gulped under his breath. "They are in that baobab."

"I don't believe in ghosts," Masha said though without conviction. They were listening to the strangest noise they had ever heard.

Awash with curiosity they crouched towards the source of the noise, all the while turning their heads in search of an escape route. They stopped again and listened. The noise was becoming more distinct as they progressed.
