Once upon a time there lived an old man called Rocho. He lived near the jungle in a small village called Chundwa. He earned a living from selling firewood to the people of a nearby town. He usually did not mind how big the tree was. He would work on it until it fell. He would then split into small pieces for drying and sell at the main market.

His axe had served him for many years and was then blunt and had a rough wooden handle. On this particular day Rocho found a medium size tree and fell it using his axe. As he was splitting the axe slipped from his tired hands and fell into the river. He stood there for sometime staring at the water and on realising that he could not retrieve it from the deep river, he sat down and mourned.

Just before dusk he decided to go back home. As he was getting up, a fairy appeared to him and asked what was wrong. He explained everything and in a minute the fairy gave him a new golden axe with a smooth handle. She asked him if it was his but he said without a second thought that it wasn't his. The fairy showed him another old axe with a rough handle, Rocho jumped up and said "That is my axe."

The fairy smiled and told him that she wanted to test his honesty. She gave Rocho both the new one and the old blunt axe.

Read the passage below and answer questions 41 to 50.

Kenyans like all people in the world depend on nature to sustain their lives. Not only do they obtain from nature the basic goods needed for survival such as water, food and fibre. They also rely on nature to purify air and water, produce healthy soils and bring about the climate they want.

Collectively, all these benefits from nature's systems can be called nature's services. These services fuel Kenya's economy and if wisely used and invested, they build out the country's wealth. The lives of common Kenyan's depends on nature and clearly show its important. Their incomes directly show how close they are to the services.

For farmers in Western Kenya, the family harvest of maize, beans, tea and other crops will reflect the level of rainfall they received, the fertility of the soil, good seeds, insects or hailstones. If a farmer uses the correct seeds fertilizer and rainfall received is enough then the harvest will be high.
